DumpStillValid design this SAP C-SIGDA-2403 practice test material with the help of the world's most respected professionals.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q51-Q56):

NEW QUESTION # 51

What most accurately describes the availability of the guided analysis?

- A. Only Innovation recommendations have a guided analysis
- B. Some process flows have a guided analysis

- C. All process flows have a guided analysis
- D. Only correction recommendations have a guided analysis

Answer: B

Explanation:

Guided analysis in SAP Signavio Process Intelligence provides structured insights for specific process analyses, but its availability is not universal across all processes. The documentation clarifies:

* Exact Extract: "Guided analysis is available for selected process flows within SAP Signavio Process Intelligence, particularly those involving performance indicators or conformance checks. It is not automatically applied to all process flows but is enabled for processes where predefined analytical paths can provide meaningful insights." (SAP Signavio Process Intelligence User Guide, section on "Guided Analysis Availability").

* Explanation:

* Option C (Some process flows have a guided analysis): This is correct because guided analysis is provided for specific process flows where it can offer valuable recommendations, such as those with complex variants or significant performance issues. For example, guided analysis might be available for an order-to-cash process to identify bottlenecks but not for a simple administrative process with minimal data.

* Option A (Only Innovation recommendations have a guided analysis) is incorrect as guided analysis covers both innovation (e.g., new process designs) and correction recommendations (e.g., fixing inefficiencies), not just innovation.

* Option B (Only correction recommendations have a guided analysis) is incorrect because guided analysis includes a broader scope, including performance analysis and improvement opportunities, not limited to corrections.

* Option D (All process flows have a guided analysis) is incorrect as guided analysis is selectively applied based on the process complexity and data availability, not universally available.

NEW QUESTION # 52

What does the strategic level focus on in Business Process Management?

- A. Align business processes to company goals.
- B. Run business tasks efficiently.
- C. Support business processes with the right systems.
- D. Define responsibilities in business processes.

Answer: A

NEW QUESTION # 53

What is a Query?

- A. A request to start a workflow
- B. A request created by the system
- C. A request to show a data model
- D. A request for information from a database

Answer: D

Explanation:

A query in the context of SAP Signavio Process Intelligence is a fundamental concept for data retrieval. The documentation provides a clear definition:

* Exact Extract: "A query is a request for information from a database, typically written in SQL, to retrieve specific data or perform calculations based on defined criteria. In SAP Signavio Process Intelligence, queries are used to extract process data for analysis, such as case attributes or event sequences." (SAP Signavio Process Intelligence User Guide, section on "SQL Query Editor and Data Retrieval").

* Explanation:

* Option B (A request for information from a database): This is correct as a query is a structured request, often in SQL, to retrieve or manipulate data from the database underlying Process Intelligence, such as fetching cases with specific attributes.

* Option A (A request to start a workflow) is incorrect because workflows are managed in SAP Signavio Process Governance, and queries do not initiate them.

* Option C (A request to show a data model) is incorrect as displaying a data model is a configuration task, not the purpose of a query.

* Option D (A request created by the system) is incorrect because queries are user-defined or configured, not automatically generated by the system.

Reference: SAP Signavio Process Intelligence User Guide, section on "SQL Query Editor and Data Retrieval"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 4: Query Fundamentals.

NEW QUESTION # 54

How can a process analysis be structured in SAP Signavio Process Intelligence? Note: There are 2 correct answers to this question.

- A. Create Sub-chapters within existing Chapters.
- **B. Create Chapters to breakdown specific topics.**
- **C. Create Investigations for specific purposes.**
- D. Create specific Data views.

Answer: B,C

NEW QUESTION # 55

How does internal benchmarking work?

- A. An indicator shows to what extent a company is running an effective process in their SAP system.
- **B. For a selected process step, every company code is analyzed and ranked according to the best-run score. This way, you can easily spot the outliers and investigate the company codes that perform well or poorly.**
- C. A selected process step is compared to the same process step in other companies of the same industry. By using this ranking, you can easily spot the outliers and investigate the process steps that perform well or poorly.
- D. An indicator shows to what extent a company is running an effective process in their non-SAP system.

Answer: B

NEW QUESTION # 56

.....

How can our C-SIGDA-2403 exam questions be the best exam materials in the field and always so popular among the candidates? There are two main reasons. First of all, we have a professional team of experts, each of whom has extensive experience on the C-SIGDA-2403 study guide. Secondly, before we write C-SIGDA-2403 Guide quiz, we collect a large amount of information and we will never miss any information points. Of course, we also fully consider the characteristics of the user. So we can make the best C-SIGDA-2403 learning questions.
