NEW QUESTION # 53

The drill-down list of a tile contains more entries than the values displayed in a chart (see attached image).

How do you make the outputs match?

- A. Configure a filter to remove the duplicate column.
- **B. Remove the column that would generate multiple entries per metric.**
- C. Remove the category assignment field.
- D. Change the metric calculation from Count to Count (Distinct).

Answer: B

Explanation:

* Mismatch Between Drill-Down and Chart Values:

* The mismatch occurs because the chart aggregates data, while the drill-down includes all entries (even duplicates).

* Resolution:

* Identify and remove the column in the drill-down configuration that causes multiple rows per metric (e.g., user-specific fields like title or ID).

* Why Other Options Are Incorrect:

* A: Filtering does not eliminate duplicates inherent in the column structure.

* B: Removing the category assignment field alters the chart structure and is unnecessary.

* C: Changing to Count (Distinct) affects the chart calculation but does not resolve the drill-down mismatch.

NEW QUESTION # 55

You are using a pivot table in your canvas report but the report does NOT display the most recent data. What could be the reason?

- A. You are NOT using a template.
- **B. You are using a query with a static date filter.**
- C. You are using the percent of total option.
- D. You are using a wrong People Scope.

Answer: B

Explanation:

* Issue with Static Date Filters:

* If the query uses a static date filter (e.g., a specific range like "January 1, 2023, to March 31, 2023"), the report will not reflect the most recent data as the filter restricts results to the defined date range.

* Resolution:

* Update the query to use dynamic date filters (e.g., "Last 30 Days" or "Current Year") to ensure the pivot table includes the latest data.
