Topic 3	<ul style="list-style-type: none">Quality Management in Sales and Distribution: The topic describes the integration of QM with Sales and Distribution.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which of the following dynamic modification criteria can be used in the inspection plan? Note: There are 3 correct answers to this question.

- A. Material and equipment
- B. Material
- C. Material and customer
- D. Material and work center
- E. Material and supplier

Answer: B,C,E

Explanation:

Dynamic modification in SAP S/4HANA QM allows the system to adjust inspection scopes (e.g., skip lots, reduced inspection) based on quality performance. These criteria are defined in the inspection plan (transaction QP01) or Quality Level settings and determine when modification occurs:

* Material and Supplier (A): This is a standard dynamic modification criterion (e.g., for inspection type 01 - Goods Receipt). It tracks quality history for a material-supplier combination, commonly used in procurement scenarios (SPRO > Quality Management > Quality Inspection > Dynamic Modification).

* Material and Customer (D): Used in sales or production scenarios (e.g., inspection type 10 - Delivery), this criterion adjusts inspections based on material-customer quality history, ensuring customer-specific requirements are met.

* Material (E): A standalone material criterion is valid across multiple inspection types (e.g., 03 - Production), allowing modification based solely on the material's quality history, regardless of supplier or customer.

* Material and Work Center (B): Work centers are linked to operations, not directly to dynamic modification criteria in standard SAP QM. This is not a predefined option.

* Material and Equipment (C): Equipment is relevant for plant maintenance (PM), not a standard QM dynamic modification criterion for inspection plans.

Thus, "Material and supplier," "Material and customer," and "Material" are the correct answers, reflecting standard SAP functionality. References: SAP Help Portal - "Dynamic Modification in QM"; SAP S/4HANA QM Customizing Guide - "Dynamic Modification Rules".

NEW QUESTION # 26

For which structure elements of a quality notification is the assignment of a catalog type possible? Note: There are 3 correct answers to this question.

- A. Defect types
- B. Tasks
- C. Assigned objects
- D. Defect causers
- E. Defect locations

Answer: A,B,E

Explanation:

In SAP S/4HANA QM, quality notifications (e.g., transaction QM01) use catalog types to classify data in specific structure elements:

* Defect Locations (A): Catalog type "A" (Defect Location) can be assigned to specify where a defect occurred (e.g., "Surface"), configured in the notification item (SPRO > QM > Quality Notifications > Catalogs).

* Defect Types (D): Catalog type "9" (Defect Type) is assigned to classify the nature of the defect (e.g., "Scratch"), a standard field in the notification item.

* Tasks (E): Catalog type "2" (Tasks) is used to define actions (e.g., "Repair") in the tasks tab of the notification.

* Assigned Objects (B): Objects (e.g., material, batch) are referenced but don't use catalog types directly.

* Defect Causers (C): Causers (e.g., "Machine") use catalog type "5" (Causes), but this isn't listed as "Defect causers" in standard terms; it's typically "Causes."

Thus, "Defect locations," "Defect types," and "Tasks" are the correct answers based on standard structure elements. References:

SAP Help Portal - "Catalogs in Quality Notifications"; SAP S/4HANA QM User Guide

- "Notification Structure".

NEW QUESTION # 27

You can assign objects to the item of a quality notification. Which of the following object categories are supported in the SAP S/4HANA standard system? Note: There are 3 correct answers to this question.

- A. Material
- B. Serial number
- C. Batch
- D. Delivery item
- E. Purchase order item

Answer: A,B,C

NEW QUESTION # 28

Which of the following sample categories can be maintained in the sample-drawing item? Note: There are 3 correct answers to this question.

- A. Reserve sample
- B. Sample for storage condition
- C. Pooled sample
- D. Primary sample
- E. Initial sample

Answer: A,C,D

Explanation:

Sample-drawing items in the sample-drawing procedure (transaction QPV2) define sample categories:

* Reserve Sample (A): A standard category for samples retained for future testing (e.g., stability), maintained in the procedure.

* Pooled Sample (B): Represents combined samples for collective testing, a defined category in sample management.

* Primary Sample (D): The initial sample taken for immediate inspection, a core category in the procedure.

* Initial Sample (C): Not a distinct category; overlaps with "Primary sample."

* Sample for Storage Condition (E): Not a standard category; storage conditions are attributes, not sample types.

Thus, "Reserve sample," "Pooled sample," and "Primary sample" are the correct answers. References: SAP Help Portal - "Sample Management in QM"; SAP S/4HANA QM User Guide - "Sample-Drawing Procedure".

NEW QUESTION # 29

What master data can you integrate into a task list for a production order?

- A. Classification
- B. Control Indicator
- C. Material Specifications
- D. MIC

Answer: D

NEW QUESTION # 30

.....

If you are looking for the latest updated questions and correct answers for SAP C-TS414-2023 exam, yes, you are in the right place. Our site is working on providing most helpful the real test questions answer in IT certification exams many years especially for C-TS414-2023. Good site provide 100% real test exam materials to help you clear exam surely. If you find some mistakes in other sites, you will know how the important the site have certain power. Choosing good C-TS414-2023 exam materials, we will be your only option.
