Die Schulungsunterlagen zur SAP C-TS470-2412 Zertifizierungsprüfung von ZertPruefung können Ihnen helfen, Ihren Traum zu realisieren, weil es alle Zertifizierungsantworten zur SAP C-TS470-2412 Prüfung hat. Mit ZertPruefung können Sie sich ganz gut auf die Prüfung vorbereiten. Per unsere guten Schulungsunterlagen von guter Qualität können Sie sicher die SAP C-TS470-2412 Prüfung bestehen und eine glänzende Zukunft haben.

SAP C-TS470-2412 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.

Thema 2	• Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.
Thema 3	• Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.
Thema 4	• Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.

C-TS470-2412 Deutsch Prüfung - C-TS470-2412 Lernhilfe

Möchten Sie die SAP C-TS470-2412 Prüfung einmalig bestehen? ZertPruefung kann Ihren Wunsch erfüllen und Ihre beste Wahl sein. Bei uns werden wir Ihre Forderungen erfüllen. Nachdem Sie unsere Produkte von C-TS470-2412 Zertifizierung gekauft haben, werden wir Ihnen eine einjährige Aktualisierung versprechen. Falls Sie die C-TS470-2412 Prüfung leider nicht bestehen, geben wir Ihnen eine volle Rückerstattung.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service C-TS470-2412 Prüfungsfragen mit Lösungen (Q67-Q72):

67. Frage

What are the prerequisites when creating a configurable product? Note: There are 2 correct answers to this question.

- **A. Assigning a variant class to a product**
- **B. Creating a configuration profile**
- C. Assigning a characteristic to a serial number
- D. Defining configurable characteristics

Antwort: A,B

Begründung:

A configurable product in SAP S/4HANA Cloud Private Edition, Service allows customization via variant configuration. The prerequisites are:

* Assigning a variant class to a product (A): A variant class defines the configurable characteristics (e.

g., size, color) and is assigned to the product master.

* Creating a configuration profile (D): The configuration profile links the product to its variant class and defines the configuration logic (e.g., dependencies).

* B: Characteristics are defined separately and linked via the variant class, not directly as a prerequisite.

* C: Characteristics are not assigned to serial numbers; serial numbers track instances, not configurations.

"Creating a configurable product requires assigning a variant class to the product and creating a configuration profile to enable variant configuration."

68. Frage

When using a configurable service product in the service contract, which condition type is used to reflect the price of the selected configuration?

- A. 871 (Service Type (Abs.))
- B. VASE (Variant Price)
- **C. VA00 (Variant Price)**
- D. PSI1 (Price f. Srv. Cntr. Itm)

Antwort: C

Begründung:

In SAP S/4HANA Cloud Private Edition, Service, a configurable service product in a service contract uses variant configuration to allow customization (e.g., selecting specific service options). The pricing for the selected configuration is reflected using the condition type VA00 (Variant Price) (Option B).

VA00 is a standard condition type in SAP's pricing framework that adjusts the base price based on the chosen configuration variants. It is linked to the variant configuration profile and updates the contract item price dynamically.

* VASE (A): This is not a standard SAP condition type; it seems to be a typo or misinterpretation.

* 871 (C): This is not a recognized condition type for configurable products in service contracts.

* PSI1 (D): This might relate to service contract items but is not specific to configurable product pricing.

"The condition type VA00 (Variant Price) is used in service contracts with configurable products to reflect the price adjustments based on the selected configuration."

69. Frage

Which type of objects can you maintain in the object list assigned to a contract item? Note: There are 3 correct answers to this question.

- **A. Functional location**
- B. Equipment bill of material
- **C. Product**
- D. Document
- **E. Equipment**

Antwort: A,C,E

Begründung:

In SAP S/4HANA Service contracts (scope item 3MO), the object list for a contract item specifies covered objects:

* Equipment: Individual equipment (e.g., serialized assets) can be assigned to track service coverage.

* Product: Materials or service products covered under the contract are listed.

* Functional location: Locations where services are performed can be included in the object list.

* Equipment bill of material: BOMs are referenced separately, not directly in the object list.

* Document: Documents are managed via Document Management System (DMS), not as contract objects. This is configured in the service contract item details. "Assign equipment, products, and functional locations to the object list of a service contract item" (SAP Help Portal, Service Contract Management).

70. Frage

For the Controlling and CATS integration, which characteristics do you need to replicate? Note: There are 2 correct answers to this question.

- A. Item category groups
- B. Valuation methods
- **C. Valuation types**
- **D. Item categories**

Antwort: C,D

Begründung:

In SAP S/4HANA Cloud Private Edition, Service, integration between Controlling (CO) and Cross-Application Time Sheet (CATS) allows time entries to be posted as costs to service orders. Replication of certain characteristics ensures accurate cost allocation. The correct answers are item categories (A) and valuation types (C). Let's explore this in depth.

Context of CO-CATS Integration:

CATS captures employee time (e.g., hours worked on a service order), which is transferred to CO for cost posting. Replication ensures consistency between service and financial data.

* Item categories (A): These define the type of service order items (e.g., service, expense). They must be replicated to CO to map time entries to the correct cost objects (e.g., a service item linked to a cost center). For example, item category "SERV" might trigger labor cost postings. This is set in customizing (e.g., SPRO # Service # Integration # CO).

* Valuation types (C): These specify how costs are valued (e.g., hourly rate, fixed cost). In CATS, valuation types determine the cost rate applied to time entries (e.g., \$50/hour for a technician).

Replicating them ensures CO uses the same rates for cost calculation.

Why Not the Others?

* Valuation methods (B): This refers to broader accounting methods (e.g., FIFO), not specific to CATS integration.

* Item category groups (D): These are material master settings for grouping, not directly relevant to service order time postings.

Practical Example:

A technician logs 5 hours in CATS for a service order item (category "SERV"). The valuation type "TECH1" (\$40/hour) is replicated to CO, posting \$200 to the order's cost object.

Additional Detail:

Replication is configured via the CATS profile and CO account assignment rules, ensuring seamless data flow. Errors in replication can lead to cost mismatches, making this a critical setup step.

"For Controlling and CATS integration, item categories and valuation types must be replicated to enable accurate cost posting from time entries."

71. Frage

To which of the following can you assign maintenance packages? Note: There are 2 correct answers to this question.

- A. A work schedule
- **B. A maintenance strategy**
- C. A service technician
- **D. A task list**

Antwort: B,D

Begründung:

In SAP S/4HANA Cloud Private Edition, Service, maintenance packages define the intervals or cycles (e.g., every 6 months, 1,000 hours) at which maintenance activities are performed within a maintenance plan. They are assigned to:

* Task list (C): Maintenance packages can be linked to operations in a task list to specify when each operation is due.

* Maintenance strategy (D): A maintenance strategy groups multiple packages (e.g., time-based or performance-based cycles) and is assigned to a maintenance plan, which then applies the packages.

* Service technician (A): Technicians are assigned to operations, not maintenance packages directly.

* Work schedule (B): This is not a standard object in SAP for assigning maintenance packages.

"Maintenance packages are assigned to task lists and maintenance strategies to define the scheduling intervals for maintenance activities in a plan."

72. Frage
