

1Z0-1111-25 valid dumps - 1Z0-1111-25 exam simulator - 1Z0-1111-25 study torrent

BTW, DOWNLOAD part of VCEEngine 1Z0-1111-25 dumps from Cloud Storage: <https://drive.google.com/open?id=1Ilz99bbe4sng7eANIOrMpcz5piFh2OM3>

Nowadays, it is hard to find a desirable job. A lot of people are forced to live their jobs because of lack of skills. So you must learn something in order to be washed out by the technology. Then our 1Z0-1111-25 study materials totally accord with your demands. With the latest information and knowledge in our 1Z0-1111-25 Exam Braindumps, we help numerous of our customers get better job or career with their dreaming 1Z0-1111-25 certification.

Oracle 1Z0-1111-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Respond to Cloud Resource Changes in Real-Time: This domain measures the skills of Event Managers and Integration Specialists in using OCI Events Service. It covers event structures, types, rules, and integration with other OCI services to respond effectively to resource changes and automate workflows.
Topic 2	<ul style="list-style-type: none">Monitor Cloud Environments with Metrics and Alarms: This section tests Oracle Cloud Operators' knowledge of configuring OCI Monitoring Service. It includes enabling metrics for resource monitoring, setting up alarms based on best practices, and responding to real-time changes in cloud environments to ensure system reliability.
Topic 3	<ul style="list-style-type: none">Summarize OCI Observability and Management Services: This section evaluates the expertise of DevOps Engineers and IT Operations Managers in utilizing Oracle Cloud Infrastructure (OCI) Observability and Management services. It covers tools for monitoring, auditing, and managing cloud resources, emphasizing automation and machine learning-driven insights to optimize IT operations.

Topic 4	<ul style="list-style-type: none"> Define the Pillars of Observability: This section of the exam measures the skills of Cloud Architects and Site Reliability Engineers (SREs) in understanding the three pillars of observability: logs, metrics, and traces. It explains how these components provide insights into system health and performance, enabling effective monitoring and troubleshooting in distributed cloud environments.
Topic 5	<ul style="list-style-type: none"> Monitor Distributed Components of an Application Stack: This section measures the skills of Stack Monitoring Specialists and Cloud Administrators in using OCI Stack Monitoring. It covers discovering resources within application stacks, monitoring metrics across distributed components, and ensuring optimal performance through effective resource management.
Topic 6	<ul style="list-style-type: none"> Distinguish the Key Concepts of Logging Analytics: This section evaluates the expertise of Data Analysts and Troubleshooting Specialists in using OCI Logging Analytics. It covers log ingestion methods, searching and filtering logs, performing advanced analytics, and leveraging machine learning-powered insights for proactive issue resolution.

1Z0-1111-25 Latest Test Simulations - 1Z0-1111-25 Valid Exam Fee

In order to meet the different need from our customers, the experts and professors from our company designed three different versions of our 1Z0-1111-25 exam questions for our customers to choose, including the PDF version, the online version and the software version. Though the content of these three versions is the same, the displays have their different advantages. With our 1Z0-1111-25 Study Materials, you can have different and pleasure study experience as well as pass 1Z0-1111-25 exam easily.

Oracle Cloud Infrastructure 2025 Observability Professional Sample Questions (Q37-Q42):

NEW QUESTION # 37

You are part of an organization with thousands of users accessing Oracle Cloud Infrastructure (OCI). An unknown user action was executed, resulting in configuration errors. You are tasked to quickly identify the details of all users who were active in the last six hours along with any REST API calls that were executed. Which OCI service would you use?

- A. Management Agent
- B. Audit
- C. Notifications
- D. Service Connectors
- E. Logging

Answer: B

Explanation:

To investigate user activity and REST API calls over the last six hours, the OCI Audit service is the appropriate tool.

Audit (E): This service automatically records all API operations (including REST API calls) performed on OCI resources. It provides detailed logs with user details, timestamps, and actions, ideal for security and compliance investigations. You can filter audit logs by time range (e.g., last six hours) and user attributes.

Why not A, B, C, or D?

Notifications (A): Sends alerts but doesn't store or analyze API call details.

Service Connectors (B): Moves data between services, not for auditing.

Management Agent (C): Collects metrics/logs from resources, not API audit data.

Logging (D): Handles application and system logs, not API activity tracking.

Audit logs are retained for 90 days by default, making this a perfect fit.

NEW QUESTION # 38

Which is the correct monitoring query that will monitor the CPU utilization threshold including an alarm?

- A. CpuUtilization[1m].max()

- B. `(CpuUtilization[1m].max() > 80).grouping().sum()`
- C. `cpuutilization[1m].max().grouping().sum()`
- D. `CpuUtilization[1m](shape "VM.Standard.E4.Flex").max()`

Answer: B

Explanation:

An MQL query for an alarm must evaluate a condition:

`(CpuUtilization[1m].max() > 80).grouping().sum()` (B):

`CpuUtilization[1m]`: Queries CPU utilization over 1-minute intervals.

`.max()`: Takes the maximum value per interval.

`> 80`: Sets a threshold (80%).

`.grouping().sum()`: Aggregates across metric streams, triggering the alarm if the sum exceeds 80%.

This is a complete alarm query.

Why not A, C, or D?

A: Filters by shape but lacks a threshold or alarm condition.

C: Missing condition for alarming.

D: No threshold; case sensitivity doesn't match OCI convention.

B ensures threshold-based alerting.

NEW QUESTION # 39

Which response contains rich information to process for analytics?

- A. Entity types
- B. Log Sources
- C. Logging Analytic Entities
- D. Database Audit Logs

Answer: D

Explanation:

For analytics, the data source must provide detailed, actionable information.

Database Audit Logs (D): These logs contain rich data like user actions, SQL queries, timestamps, and security events, making them ideal for performance, security, and compliance analysis in Logging Analytics.

Why not A, B, or C?

Entity types (A): These are metadata definitions, not data for analytics.

Log Sources (B): These are configurations for log parsing, not the logs themselves.

Logging Analytic Entities (C): Entities are resource representations, not the data content.

Database Audit Logs offer the depth needed for meaningful insights.

NEW QUESTION # 40

Which of the following features of Logging Analytics is used for identifying and tagging problem logs during ingestion time?

- A. Log Origin
- B. Labels
- C. Entity Type
- D. Extended Fields

Answer: B

Explanation:

In OCI Logging Analytics, Labels enhance log analysis by tagging specific records:

Labels (B): Predefined tags applied during ingestion based on conditions (e.g., "Error" for logs with "error" or "exception"). Labels help categorize and filter problem logs for easier searching and troubleshooting.

Why not A, C, or D?

Entity Type (A): Defines the resource type (e.g., host), not a tagging mechanism.

Log Origin (C): Metadata about log source, not for problem identification.

Extended Fields (D): Custom fields extracted post-ingestion, not tags applied during ingestion.

Labels streamline issue detection at the ingestion stage.

NEW QUESTION # 41

From the following, select the different metric namespaces used for APM.

- A. AjaxDownloadTime, TotalTraceCount, Oracle_pm_run
- B. oracle_apm_monitoring namespace, synthetics, and monitoring
- C. oracle_apm_run, oracle_apm_synthetics, and oracle_apm_monitoring
- D. RUM metrics, oracle_apm_monitoring, Oracle_apm_synthetic

Answer: C

Explanation:

APM uses specific metric namespaces to categorize its telemetry data:

oracle_apm_run, oracle_apm_synthetics, and oracle_apm_monitoring (D):

oracle_apm_run: Metrics from Real User Monitoring (e.g., page load times).

oracle_apm_synthetics: Metrics from Synthetic Monitoring (e.g., test response times).

oracle_apm_monitoring: Metrics from distributed tracing (e.g., span counts).

These namespaces align with APM's three core features.

Why not A, B, or C?

A: Individual metric names, not namespaces.

B: Incomplete and incorrect namespace naming.

C: Mixes metric types with partial namespace names.

These namespaces enable targeted metric queries in OCI Monitoring.

NEW QUESTION # 42

.....

VCEngine has formulated 1Z0-1111-25 PDF questions for the convenience of Oracle 1Z0-1111-25 test takers. This format follows the content of the Oracle 1Z0-1111-25 examination. You can read Oracle 1Z0-1111-25 Exam Questions without the limitations of time and place. There is also a feature to print out Oracle 1Z0-1111-25 exam questions.
