Amazon DVA-C02 Test Pass4sure Spend Your Little Time and Energy to Pass DVA-C02 exam

The empty promise is not enough. So our ValidBraindumps provides to all customers with the most comprehensive service of the highest quality including the free trial of DVA-C02 software before you buy, and the one-year free update after purchase. We will

be with you in every stage of your DVA-C02 Exam Preparation to give you the most reliable help. Even if you still failed the DVA-C02 certification exam, we will full refund to reduce your economic loss as much as possible.

Amazon DVA-C02 certification exam is an excellent way for developers to validate their skills in AWS development. DVA-C02 exam covers a wide range of topics and requires a deep understanding of AWS services and best practices. With the right preparation and dedication, earning the DVA-C02 Certification can lead to many exciting career opportunities in AWS development.

Amazon AWS Certified Developer - Associate Sample Questions (Q86-Q91):

NEW QUESTION # 86

A developer needs to configure an AWS Lambda function to make HTTP POST requests to an internal application. The application is in the same AWS account that hosts the function. The internal application runs on Amazon EC2 instances in a private subnet within a VPC.

Which solution will meet these requirements?

- A. Configure a VPC endpoint to connect to the private subnet. Attach the endpoint to the Lambda function.
- **B. Attach the Lambda function to the VPC and to the private subnet.**
- C. Configure a VPN connection between the Lambda function and the private subnet. Attach the VPN to the Lambda function.
- D. Configure the VPC route table to include the Lambda function's IP address.

Answer: B

NEW QUESTION # 87

A company has an application that uses an Amazon S3 bucket for object storage. A developer needs to configure in-transit encryption for the S3 bucket. All the S3 objects containing personal data needs to be encrypted at rest with AWS KMS keys, which can be rotated on demand. Which combination of steps will meet these requirements? (Choose two.)

- **A. Write an S3 bucket policy to allow only encrypted connections over HTTPS by using the aws:SecureTransport condition.**
- B. Configure an S3 bucket policy to enable client-side encryption for the objects containing personal data by using an AWS KMS customer managed key
- C. Write an S3 bucket policy to allow only encrypted connections over HTTPS by using permissions boundary.
- D. Configure S3 Block Public Access settings for the S3 bucket to allow only encrypted connections over HTTPS.
- **E. Configure the application to encrypt the objects by using an AWS KMS customer managed key before uploading the objects containing personal data to Amazon S3.**

Answer: A,E

NEW QUESTION # 88

An application interacts with Amazon Aurora to store and track customer information. The primary database is set up with multiple read replicas for improving the performance of the read queries. However, one of the Aurora replicas is receiving most or all of the traffic, while the other Aurora replica remains idle.

How can this issue be resolved?

- **A. Disable application-level DNS caching.**
- B. Enable application pooling.
- C. Enable application-level DNS caching.
- D. Disable application pooling.

Answer: A

NEW QUESTION # 89

A company has an Amazon S3 bucket that contains sensitive data

a. The data must be encrypted in transit and at rest. The company encrypts the data in the S3 bucket by using an AWS Key Management Service (AWS KMS) key. A developer needs to grant several other AWS accounts the permission to use the S3 GetObject operation to retrieve the data from the S3 bucket.

How can the developer enforce that all requests to retrieve the data provide encryption in transit?

- A. Define a resource-based policy on the S3 bucket to allow access when a request meets the condition "aws:SecureTransport": "false".
- B. Define a resource-based policy on the KMS key to deny access when a request meets the condition of "aws:SecureTransport": "false".
- C. Define a role-based policy on the other accounts' roles to deny access when a request meets the condition of "aws:SecureTransport": "false".
- **D. Define a resource-based policy on the S3 bucket to deny access when a request meets the condition "aws:SecureTransport": "false".**

Answer: D

NEW QUESTION # 90

An ecommerce company is using an AWS Lambda function behind Amazon API Gateway as its application tier. To process orders during checkout, the application calls a POST API from the frontend. The POST API invokes the Lambda function asynchronously. In rare situations, the application has not processed orders. The Lambda application logs show no errors or failures. What should a developer do to solve this problem?

- **A. Create and inspect the Lambda dead-letter queue. Troubleshoot the failed functions. Reprocess the events.**
- B. Make sure that caching is disabled for the POST API in API Gateway.
- C. Inspect the frontend logs for API failures. Call the POST API manually by using the requests from the log file.
- D. Inspect the Lambda logs in Amazon CloudWatch for possible errors. Fix the errors.

Answer: A

Explanation:

The solution that will solve this problem is to create and inspect the Lambda dead-letter queue. Troubleshoot the failed functions. Reprocess the events. This way, the developer can identify and fix any issues that caused the Lambda function to fail when invoked asynchronously by API Gateway. The developer can also reprocess any orders that were not processed due to failures. The other options either do not address the root cause of the problem, or do not help recover from failures.
