In addition to attending the course, candidates can also use practice exams and study guides to prepare for the exam.

## Adobe Experience Manager Architect Master Sample Questions (Q36-Q41):

### NEW QUESTION # 36

During the implementation of a public-facing website based on AEM as a Cloud Service, the customer raises an additional requirement to have a commenting functionality for end users implemented on the pages.

What should the Architect do to make the design a future proof solution?

- A. Use MongoDB as provided with AEM as a Cloud Service to store the comments
- B. Save comments in JCR and leverage Sling Distribution to synchronize comments between publishers
- C. Save comments in JCR and leverage reverse replication to synchronize comments via author
- D. Integrate a third-party solution to store comments externally

Answer: D

Explanation:

"integrating a third-party solution to store comments externally can provide a future proof solution that does not depend on AEM as a Cloud Service limitations or changes".

#### NEW QUESTION # 37

Users report cases where data inaccuracies are present in an AEM component that relies on AEM Search functionality. The AEM platform utilizes Lucene as its main search engine.

How should an Architect resolve this issue?

- A. Scale up server resources to meet demands
- **B. Add search indexes to Lucene search engine**
- C. Migrate search engine to an external Solr instance
- D. Change the search engine to Property Search

**Answer: B**

Explanation:

"adding search indexes to Lucene search engine can improve the performance and accuracy of AEM Search functionality".

#### NEW QUESTION # 38

A customer has an international presence and a strong brand image. The customer considers the exceptional quality images used for both print and on the website to be essential for its business. The customer uses AEM 6.5 managed services with a configuration of 2 dispatchers, 2 publishers, and 1 author.

The original images can weigh up to 500Mb with videos weighing even more. Renditions are generated after files are uploaded to AEM DAM by the Design team so the Authoring team can use them on the website.

The teams report issues with platform stability and slowness. Visitors report that images look pixelated on some screens and pages are very slow to load.

Which two actions should the Architect take to resolve these issues? (Choose two.)

- **A. Optimize renditions for the different viewports used by the visitors**
- B. Add more dispatchers and publishers to the AEM configuration
- C. Train the design team to upload smaller assets and save the originals elsewhere
- **D. Split AEM Assets and Sites in two different stacks and use Connected Assets**
- E. Allocate more memory to ImageMagick and FFmpeg

**Answer: A,D**

Explanation:

"optimizing renditions for different viewports can improve the image quality and page load speed for visitors. Splitting AEM Assets and Sites in two different stacks and using Connected Assets can reduce the load on the author server and improve platform stability".

#### NEW QUESTION # 39

AEM Site users report that the web content pages render very slowly. An Architect notices that the CPU usages of the AEM Publish instances are spiking and reviews the following entry in the log:

[Fri Nov 27 23:11:00 2019] [I] [pid 16004 (tid 140134145820416)] Current cache hit ratio: 47.94 % What should the Architect do to increase the dispatcher cache ratio and prevent the AEM Publish CPU usage spikes?

- A. Review and optimize the Dispatcher cache configuration
- B. Add additional AEM instances to the Publish Farm
- C. Add additional dispatcher servers
- **D. Create a cron job that will delete the dispatcher cache on a regular basis**

**Answer: D**

#### NEW QUESTION # 40
