

# 100% Pass Rate HPE7-A06 New Real Exam by Exam4Docs

BONUS!!! Download part of Exam4Docs HPE7-A06 dumps for free: <https://drive.google.com/open?id=1SQj--dpDzCccjXEqnNt0PFDF4CKkA7hb>

Many people choose to sign up for the HP HPE7-A06 certification examinations in order to advance their knowledge and abilities. We offer updated and actual HP HPE7-A06 Dumps questions that will be enough to get ready for the HP HPE7-A06 test. Our HP HPE7-A06 questions are 100% genuine and will certainly appear in the next HP HPE7-A06 test.

Our HPE7-A06 learning guide is very efficient tool for in our modern world, everyone is looking for to do things faster and better so it is no wonder that productivity hacks are incredibly popular. So we must be aware of the importance of the study tool. In order to promote the learning efficiency of our customers, our HPE7-A06 Training Materials were designed by a lot of experts from our company. Our HPE7-A06 study dumps will be very useful for all people to improve their learning efficiency.

## Improve Your Chances of Success with HP's Realistic HPE7-A06 Exam Questions and Accurate Answers

It is not hard to know that HPE Campus Access Switching Expert Written Exam torrent prep is compiled by hundreds of industry experts based on the syllabus and development trends of industries that contain all the key points that may be involved in the

examination. HPE7-A06 guide torrent will never have similar problems, not only because HPE7-A06 exam torrent is strictly compiled by experts according to the syllabus, which are fully prepared for professional qualification examinations, but also because HPE7-A06 Guide Torrent provide you with free trial services. Before you purchase, you can log in to our website and download a free trial question bank to learn about HPE7-A06 study tool.

## HPE Campus Access Switching Expert Written Exam Sample Questions (Q101-Q106):

### NEW QUESTION # 101

The customer wants to configure ARP inspection on VLAN 6 port 1/1/2 but not on port 1/1/1.

What are the correct commands to establish this?

- A. 

```
vlan 6
  arp inspection
interface vlan 6
  arp inspection trust 1/1/1
  arp inspection untrust 1/1/2
```
- B. 

```
vlan 6
  arp inspection
interface 1/1/1
  vlan access 6
  arp inspection trust
interface 1/1/2
  vlan access 6
```
- C. 

```
interface vlan 6
  arp inspection
interface 1/1/1
  vlan access 6
interface 1/1/2
  vlan access 6
  arp inspection untrust
```
- D. 

```
interface vlan 6
  arp inspection
interface 1/1/1
  vlan 6
  arp inspection trust
interface 1/1/2
  vlan 6
  arp inspection untrust
```

**Answer: D**

Explanation:

arp inspection must be enabled under the VLAN.

Port 1/1/1 is set as trusted, so ARP packets are not inspected.

Port 1/1/2 is set as untrusted, so ARP packets are inspected.

### NEW QUESTION # 102

An HPE Aruba Networking CX switch administrator wants to monitor all inter-switch connections and change their descriptions dynamically with Python script and NAE engine. The administrator has written the script template and uploaded it to the switch GUI. After the upload, not all data is stored as planned.

Which things should be checked first? (Choose three.)

- A. script usage
- B. flash memory usage
- C. agent usage
- D. monitor usage
- E. memory usage

- F. processor usage

**Answer: B,C,D**

Explanation:

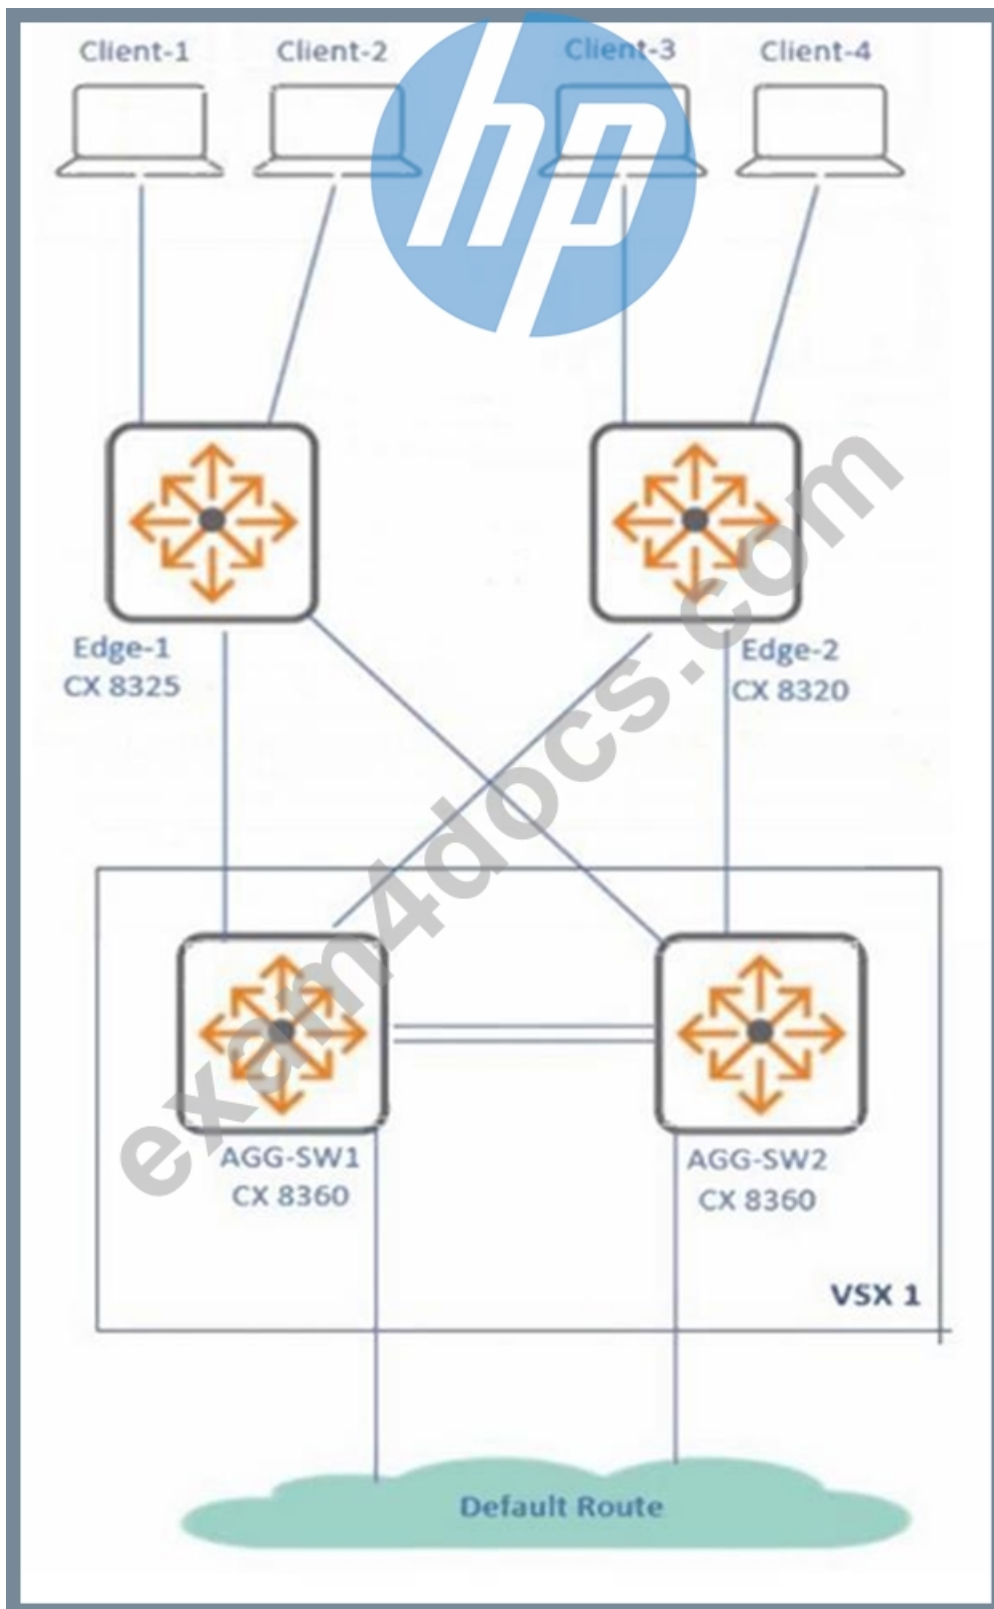

flash memory usage: The switch must have enough flash memory to store uploaded scripts and associated data.

agent usage: There is a limit to the number of active NAE agents; exceeding it can cause issues with storing or running new scripts.

monitor usage: There are limits on how many monitors (data collection points) can be active per switch or per agent; exceeding these can prevent data from being stored as planned.

#### **NEW QUESTION # 103**

Refer to the exhibit.

A conference venue has a requirement to secure independent network users from each other in their network. What can be done to prevent clients from communicating with each other using the customer's equipment?

- A. With Edge-1 and Edge-2 connected clients, an isolated VLAN can be used.
- B. With Edge-2 connected clients, an isolated VLAN can be used.
- C. With Edge-1 and Edge-2 connected clients, a community VLAN can be used.
- D. With Edge-1 connected clients, an isolated VLAN can be used.

**Answer: A**

Explanation:

To secure independent users from communicating with each other, the correct approach is to configure an isolated VLAN. In an isolated VLAN, clients can reach the default gateway for external access but cannot communicate directly with other clients in the same VLAN. Since clients connect through both Edge-1 and Edge-2, the isolated VLAN must be applied on both switches to ensure complete client isolation across the venue.

#### NEW QUESTION # 104

During troubleshooting, an engineer finds excessive ARP requests in the network. Which setting could mitigate this issue?

- A. Configuring proxy ARP
- B. Adjusting MAC aging timers
- C. Increasing ARP cache size
- **D. Enabling DHCP Snooping**

**Answer: D**

#### NEW QUESTION # 105

An OSPF router has learned a path to an external network by both an E1 and an E2 advertisement, both routes having the same path cost. Which path will the router prefer?

- A. The router will use both paths equally by means of ECMP
- B. The router will prefer the E2 path.
- **C. The router will prefer the E1 path.**
- D. Both routes will be suppressed until the path conflict has been resolved.

**Answer: C**

Explanation:

The question involves an OSPF router receiving both an E1 (External Type 1) and an E2 (External Type 2) advertisement for an external network with the same path cost. The task is to determine which path the router will prefer.

\* Analysis of Options:

\* Option A (ECMP): Equal-Cost Multi-Path (ECMP) is used when multiple paths have the same total cost, but E1 and E2 routes have different metric calculations, so ECMP does not apply here.

\* Option B (Prefer E2): Incorrect, as E2 routes are preferred only when E1 routes are not present or have a higher total cost.

\* Option C (Suppressed): OSPF does not suppress routes due to path conflicts; it selects the best path based on metrics.

\* Option D (Prefer E1): Correct. OSPF prefers E1 routes over E2 routes because E1 routes include the internal cost to the ASBR (Autonomous System Boundary Router) plus the external cost, providing a more accurate total cost.

\* Why Option D is Correct: In OSPF, external routes are advertised as E1 or E2. E1 routes include both the external cost (advertised by the ASBR) and the internal cost to reach the ASBR, making them more precise for path selection. E2 routes only consider the external cost and are the default for redistributed routes unless explicitly configured as E1. When an OSPF router receives both E1 and E2 routes with the same external cost, it prefers the E1 route because it accounts for the total path cost, including internal network topology. This is per OSPF standards (RFC 2328).

\* Relevance to Certification Objectives:

\* Routing (16%): Involves designing and troubleshooting OSPF routing topologies, including external route types (E1 vs. E2).

\* Troubleshooting (10%): Includes analyzing OSPF path selection to resolve routing issues.

References:
