PRACTICE TEST: ENGLISH 7 (GLOBAL SUCCESS - UNITS 7-11)

I. PRONUNCIATION & STRESS

Mark the letter A, B, C, or D to indicate the word whose underlined part differs from the other three in pronunciation.

Question 1. A. hydro B. skytrain C. hypertoop D. difficult

Question 2. A. future B. function C. nuclear D. pure

Question 3. A. choose B. flood C. spoon D. typhoon

Mark the letter A, B, C, or D to indicate the word that differs from the other three in the position of primary stress.

Question 4. A. solar B. fossil C. carbon D. career

Question 5. A. energy B. plentiful C. renewable D. character

Question 6. A. popular B. industry C. politics D. disaster

II. MULTIPLE CHOICE

Mark the letter A, B, C, or D to indicate the correct answer to each of the following questions.

Question 7. I think that in the year 2050, people _____ in flying cars.

A. travel B. will travel C. are traveling D. traveled

Question 8. Look! The students _____ solar panels on the roof of the school.

A. install B. will install C. are installing D. installed

Question 9. Coal and oil are _____ sources, so they are not good for the environment.

A. renewable B. non-renewable C. plentiful D. eco-friendly

Question 10. _____ we don't save energy now, we will face a big problem in the future.

A. If B. Unless C. Although D. However

Question 11. This blue schoolbag is mine, and that red one is _____.

A. your B. yours C. you D. yourself

Question 12. A _____ can help us travel from one place to another instantly.

Our Advanced HPE Storage Architect Solutions Written Exam exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our product boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the exam to make you learn efficiently and easily. There are many advantages of our HPE7-J01 Study Tool.

Are you satisfied with your present job? Are you satisfied with what you are doing? Do you want to improve yourself? To master some useful skills is helpful to you. Now that you choose to work in the IT industry, you must register IT certification test and get the IT certificate which will help you to upgrade yourself. What's more important, you can prove that you have mastered greater skills. And then, to take HP HPE7-J01 Exam can help you to express your desire. Don't worry. It-Tests will help you to find what you need in the exam and our dumps must help you to obtain HPE7-J01 certificate.

HPE7-J01 Test Topics Pdf - How to Study & Well Prepare for HP HPE7-J01 Exam

The three versions of our HPE7-J01 training materials each have its own advantage, now I would like to introduce the advantage of the software version for your reference. It is quite wonderful that the software version can simulate the real HPE7-J01 examination

for all of the users in windows operation system. By actually simulating the real test environment, you will have the opportunity to learn and correct your weakness in the course of study on HPE7-J01 learning braindumps.

HP Advanced HPE Storage Architect Solutions Written Exam Sample Questions (Q59-Q64):

NEW QUESTION # 59

A customer has a mix of applications for VMware VMs, HPE containers, and bare metal solutions. The customer is an early adopter of containers and is already using HPE Ezmeral Runtime Enterprise. They have the following criteria:

- * The customer runs applications on VMware VMs.
- * The customer wants to run multiple workloads on bare metal, VMs, and containers.
- * The customer wants a fully managed hybrid multi-cloud environment.
- * The customer wants to integrate into DevOps toolchains for immediate productivity.

Which solution will best fit the customer's needs?

- A. HPE Private Cloud Business Edition with HPE VME
- B. HPE GreenLake for VCF
- C. HPE GreenLake for Microsoft Azure Stack HCI
- **D. HPE Private Cloud Enterprise**

Answer: D

Explanation:

The customer's requirements specify a need for a fully managed environment that supports a "multi-gen" IT stack, including virtual machines (VMs), containers, and bare metal servers, all while providing a cloud-like operational experience for DevOps. HPE Private Cloud Enterprise (PCE) is the only solution in the portfolio designed specifically to meet all these criteria in a single, integrated managed service.

HPE Private Cloud Enterprise provides an automated, self-service cloud experience for developers and IT operators. It natively supports the provisioning and lifecycle management of bare metal compute resources, which is a key requirement for the customer's diverse workload environment. For containers, PCE integrates with standard Kubernetes orchestration, and for virtual machines, it supports multiple hypervisors including VMware. A critical differentiator is that PCE is delivered as a managed service, meaning HPE handles the underlying infrastructure management (updates, patching, and health), allowing the customer to focus on application development and DevOps productivity.

Options A and B are focused on specific stacks (VMware Cloud Foundation and Azure Stack HCI, respectively) which do not offer the same native, unified bare-metal management and multi-workload breadth as PCE. HPE Private Cloud Business Edition (Option C) is a self-managed solution intended for smaller-scale VM environments and does not provide the "fully managed" experience or the native bare-metal compute service required by this enterprise customer. PCE's inclusion of HPE Morpheus Enterprise software further ensures the "DevOps toolchain" integration requirement is met by providing a powerful self-service engine for infrastructure-as-code.

NEW QUESTION # 61

A customer wants to reduce ransomware risk by ensuring backup copies are immutable and isolated from the production environment. Which architecture best addresses this requirement?

- A. HPE StoreOnce with Catalyst immutable backups
- B. RAID 6 arrays
- C. Thin provisioning
- D. Fibre Channel zoning

Answer: A

Explanation:

StoreOnce supports immutable backup copies using Catalyst features, protecting data from deletion or modification during retention periods. This significantly improves ransomware resilience. RAID and zoning protect availability and connectivity but do not prevent backup tampering. Thin provisioning optimizes capacity, not security.

NEW QUESTION # 62

What is the primary advantage of deduplication in backup environments?

- A. Increases network hops
- B. Reduces storage consumption
- C. Improves CPU clock speed
- D. Disables encryption

Answer: B

Explanation:

Deduplication identifies and removes duplicate data blocks, significantly reducing backup storage requirements and WAN bandwidth consumption. It improves efficiency without affecting CPU speed or encryption policies.

NEW QUESTION # 63

What is a dependency to keep in mind regarding trunking, cable lengths, and deskew units when calculating RTT for fibre channel Brocade ISLs for optimal performance?

- A. A 20-meter difference is approximately equal to one deskew unit.
- B. Trunks can be a mixture of cable lengths, as long as all cables in the ISL use the same transceiver type.
- C. Deskew units represent the time difference for traffic to travel over a single connection of the ISL.
- D. The shortest ISL is set to a deskew value that depends on the switch hardware platform generation.

Answer: A

Explanation:

In Brocade Fibre Channel fabrics, ISL Trunking allows multiple physical links to behave as a single logical entity. For this to work efficiently, the switch must synchronize the delivery of frames across all physical links to ensure they arrive in the correct order. This process is managed by the Deskew mechanism.

"Skew" refers to the difference in time it takes for a signal to travel across the different physical cables within a trunk, often caused by slight variations in cable lengths. According to the Brocade Fabric OS Administration Guide, the switch hardware automatically measures these differences and applies "deskew units" to the faster (shorter) links to delay them, effectively matching the speed of the slowest (longest) link in the trunk.

A critical rule in SAN design is the distance limitation between cables in a trunk. While Brocade switches are highly capable of compensating for skew, the maximum supported difference in cable length within a single trunk is usually around 30 meters. For calculation purposes, one deskew unit is approximately equal to 20 meters of cable length. If the physical length difference between the shortest and longest cable exceeds the hardware's deskew buffer capacity (which varies by ASIC generation but is measured against this 20m/unit metric), the trunk will fail to initialize or will experience significant performance degradation.
