최신 VMCE VMCE_v12 무료샘플문제 (Q15-Q20):

질문 # 15

Which of the following need to be performed in order to switch from the original VM to a VM Replica and then to use this replica as the original VM?

- A. Undo failover
- B. Change the replication Job to reverse the replication
- C. Failback + commit failback
- D. Permanent failover

정답: D

질문 # 16

Which backup method produces a backup chain that consists of the first full backup file (VBK) and a set of incremental backup files (VIB) following it? Additionally, the backup chain contains synthetic full and/or active full backup files that divide the backup chain into shorter series.

- A. Forever forward incremental backup
- B. Differential incremental backup
- C. Reverse incremental backup
- D. Forward incremental backup

정답: D

설명:

질문 # 17

A backup administrator is called in to review a new Veeam deployment created by a coworker. The backup administrator takes the following notes:

- * 12 backup jobs
- * 1 SOBR configured with AWS S3 Performance Tier
- * 1 Repository configured on Hardened Immutable Repository

The administrator also notes that six jobs are configured to use the SOBR and six jobs are configured to use the Hardened Immutable Repository.

What should the backup administrator report to the other coworker regarding the 3-2-1 backup strategy?

- A. This needs the Hardened Immutable Repository added to the capacity tier.
- B. This will save costs with the Archive Tier in the SOBR.
- C. This meets the 3-2-1 best practices requirements.
- D. This only has 1 copy of the backup data.

정답: D

설명:

The 3-2-1 backup strategy is a best practice that suggests having three total copies of your data, two of which are local but on different devices or media, and one copy offsite. In the described scenario, although there is an offsite component (SOBR with AWS S3 Performance Tier), and a local hardened immutable repository, there is no indication of a second local copy on a different device or media. This means that there is only one local copy of the backup data and one offsite copy. Therefore, the setup does not meet the 3-2-1 best practices requirement, which would involve having at least one more local copy on different media or device.

질문 # 18

What can Veeam Service Providers deploy in the Veeam Service Provider Console v7.0?

- A. Veeam Backup for Microsoft 365
- B. Veeam One
- C. Veeam backup agents
- D. Enterprise plugins

정답: C

설명:

Veeam Service Provider Console allows service providers to deploy Veeam backup agents to protect physical and virtual environments, including workstations, servers, and cloud instances.

질문 # 19

A customer has an Amazon Simple Storage Service compatible object storage repository in their secondary site. Backup jobs on the main site are configured with weekly full backups to a hardened repository with XFS and a retention of 14 days. The requirement is to keep only backups older than 14 days but no more than 30 days in the Amazon S3 repository.

What must the systems engineer do to meet these requirements?

- A. Create a backup copy job (Immediate mode) to the Amazon S3 repository with 30 days retention, scheduled every 2 weeks.
- B. Increase the retention to 30 days and set the Amazon S3 repository as the Capacity Tier of the Scale-out Backup Repository, with Move mode set to 14 days.
- C. Create a backup copy job (Periodic mode) to the Amazon S3 repository with 14 days retention, scheduled daily.
- D. Set the Amazon S3 repository as the Capacity Tier of the Scale-out Backup Repository, with Move mode set to 30 days.

정답: B

설명:

Using move mode at 14 days with 30 day retention means backups are removed after 30 days still, but only 'move' to the S3 after 14 days.
