## Dumps Fire-Inspector-II Vce - Your Reliable Support to Pass 67 - Fire Inspector II Exam

Of course, a personal learning effect is not particularly outstanding, because a person is difficult to grasp the difficult point of the test, the latest trend in an examination to have no good updates at the same time, in order to solve this problem, our Fire-Inspector-II study braindumps for the overwhelming majority of users provide a powerful platform for the users to share. Here, the all users of the Fire-Inspector-II Exam Questions can through own ID number to log on to the platform and other users to share and exchange, can even on the platform and struggle with more people to become good friend, pep talk to each other, each other to solve their difficulties in study or life. The Fire-Inspector-II prep guide provides user with not only a learning environment, but also create a learning atmosphere like home.

## International Code Council 67 - Fire Inspector II Exam Sample Questions

## (Q70-Q75):

### NEW QUESTION # 70

A "control area" is defined by the fire code as a building or portion of a building within which the exempted amounts of \_\_\_\_ are allowed to be stored, dispensed, used, or handled.

- A. combustible liquids only
- B. flammable liquids only
- C. corrosive materials only
- **D. hazardous materials**

**Answer: D**

### NEW QUESTION # 71

Quantities of flammable liquid storage in a control area of an S Occupancy may be doubled when:

- **A. the building is protected with automatic sprinklers.**
- B. the control area exceeds 50,000 sq. ft.
- C. the control area is provided with exhaust ventilation in accordance with fire code requirements.
- D. permission is granted by the chief.

**Answer: A**

Explanation:

The storage of flammable liquids in control areas within an S Occupancy (Storage Occupancy) is governed by the 2021 International Fire Code (IFC), Section 5003 - Hazardous Materials, and Table 5003.1.1(1).

IFC Section 5003.1.1(1) - Maximum Allowable Quantity (MAQ) Adjustments:

The maximum allowable quantity (MAQ) of flammable liquids in a control area may be doubled if an approved automatic sprinkler system is installed throughout the building.

Why Other Options Are Incorrect?

A: Permission is granted by the chief.

Fire officials can enforce code requirements but do not have the authority to override MAQ limits unless explicitly allowed in the code.

B: The control area exceeds 50,000 sq. ft.

The code does not specify an increase based solely on size; the sprinkler system is the determining factor.

D: The control area is provided with exhaust ventilation in accordance with fire code requirements.

While ventilation is important for hazardous material safety, it does not allow for an increase in the maximum storage quantity.

### NEW QUESTION # 72

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- A. Their batteries must be checked every six months.
- B. They must automatically sound a fire alarm throughout the hotel.
- **C. They must be interconnected so that one alarm will activate all alarms within the guest rooms.**
- D. They must initiate an automatic fire suppression or sprinkler system.

**Answer: C**

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section 907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A). Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B). They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.  
C). They must initiate an automatic fire suppression or sprinkler system.  
Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.  
# Correct answer: D. They must be interconnected so that one alarm will activate all alarms within the guest rooms.

#### NEW QUESTION # 73

A building occupied for aerosol storage shall be classified as which of the following occupancy classifications?

- **A. High-hazard Group H**
- B. High-hazard Group H-3
- C. High-hazard Group H-2
- D. Group S-1

**Answer: A**

Explanation:

IFC Section 3804.1 classifies aerosol storage as Group H (high-hazard) if flammable, fitting option A.

Options B and C are subgroups (H-2, H-3), while D (Group S-1) is for moderate-hazard storage, not applicable. This is consistent with the study guide's occupancy classifications.

References: Fire Inspector II Study Guide, IFC Section 3804.1.

#### NEW QUESTION # 74

The interior finish of walls and a ceiling in an atrium may not be less than \_\_\_ Class

- A. Class B - Less fire-resistant than Class A, not permitted for atriums.
- **B. Class A - Interior Finish Ratings (Per ASTM E84 and NFPA 286).**
- C. Class D - Not recognized as an acceptable interior finish classification for atriums.
- D. Class C - Provides even lower fire protection, making it unsuitable.

**Answer: B**

Explanation:

The interior finish requirements for walls and ceilings in an atrium are regulated under the 2021 International Building Code (IBC), Section 404 - Atriums, and Table 803.11 - Interior Wall and Ceiling Finish Requirements.

IBC Section 404.8 - Interior Finish in Atriums:

"The interior finish of walls and ceilings in an atrium shall be not less than Class A." Class A interior finishes have the highest level of fire resistance and low flame spread to minimize fire hazards in large open spaces like atriums.

#### NEW QUESTION # 75

.....

We provide you with the latest prep material which is according to the content of International Code Council Fire-Inspector-II certification exam and enhances your knowledge to crack the test. VCETorrent practice material is made by keeping in focus all the sections of the current syllabus. Our primary objective is to provide you with 67 - Fire Inspector II Exam (Fire-Inspector-II) actual questions to complete preparation for the test in few days. Our product includes 67 - Fire Inspector II Exam real questions, desktop practice test software, and web-based practice exam. Keep reading to find out what are the specifications of these formats.
