認定する VMCE_v12最新問題一回合格-高品質な VMCE_v12 認証試験

より良い生活を送るには、自分の能力を向上する必要があります。VMCE_v12試験に参加することはひとつの方法です。VMCE_v12学習教材を買くと、その教材の高品質に驚いています。VMCE_v12学習教材の的中率が高いですので、多くの方はVMCE_v12試験に合格しました。従って、より良い生活のために、早くVMCE_v12学習教材を入手します。

Veeam Certified Engineer v12 認定 VMCE_v12 試験問題 (Q75-Q80):

質問 # 75

In the war against ransomware, a company decided to implement tape backup. The infrastructure contains Hyper-V VMs. What is the correct approach to getting all servers onto tape?

- A. Create media sets, then create backup to tape jobs.
- B. Create media pools, then create backup to tape jobs.
- C. Create media pools, then create file to tape jobs.
- D. Create media sets, then create file to tape jobs.

正解: B

解説:

Explanation

Tape backup jobs in Veeam Backup & Replication are created using the "backup to tape" functionality. This allows you to copy backups from disk-based repositories to tape media for long-term retention. To implement this approach, you would first create media pools. Media pools are logical containers that group tape media together. They define the available tape resources and their usage. Media pools can be configured based on specific criteria, such as tape type or capacity.

https://helpcenter.veeam.com/docs/backup/vsphere/getting_started_with_tapes.html?ver=120

質問 # 76

Which of the following scenarios properly applies the 3-2-1 rule to backup jobs?

- A. Use a backup job to back up to a Scale-out Backup Repository configured with capacity tier using AWS S3 and enable move mode
- B. Use a backup job to back up to a local repository; perform a backup copy job to a repository in another location
- C. Use a backup job to back up to a local repository; perform a backup copy job to the same repository
- D. Use backup jobs to back up directly to tape; ship the tapes off site

正解: C

質問 # 77

What can Veeam Service Providers deploy in the Veeam Service Provider Console v7.0?

- A. Enterprise plugins
- B. Veeam backup agents
- C. Veeam One
- **D. Veeam Backup for Microsoft 365**

正解: D

解説:

In the Veeam Service Provider Console v7.0, Veeam Service Providers can deploy C: Veeam Backup for Microsoft 365. This deployment option is designed to extend the capabilities of Veeam Service Providers, allowing them to offer managed backup services for Microsoft 365 environments, including Exchange Online, SharePoint Online, OneDrive for Business, and Microsoft Teams. Veeam Backup for Microsoft 365 is a comprehensive solution that provides secure backup of Microsoft 365 data, ensuring its availability and recoverability in the event of accidental deletion, security threats, or retention policy gaps. By integrating this solution into the Veeam Service Provider Console, service providers can manage and monitor Microsoft 365 backups across multiple tenants, enhancing their service offerings and providing added value to their customers.

質問 # 78

A Veeam administrator has been tasked to create a backup that will automatically make a copy of data on a different media type, while also being off site, without creating additional backup or backup copy jobs. The administrator has determined that a Scale-out Backup Repository can be used as part of the solution. How can this be accomplished?

- A. Add an archive tier to the Scale-out Backup Repository and enable "GFS Tiering".
- **B. Add a capacity tier to the Scale-out Backup Repository and enable the "Copy" option.**
- C. Add an archive tier to the Scale-out Backup Repository and enable the "Copy" option.
- D. Add a capacity tier to the Scale-out Backup Repository and enable the "Move" option.

正解: B

解説:

By adding a capacity tier to the Scale-out Backup Repository and enabling the "Copy" option, the administrator can create a backup that automatically copies data to a different media type (object storage) and also ensures that the data is offsite. This is accomplished without creating additional backup or backup copy jobs. The "Copy" option allows for immediate copying of backups to the capacity tier, meeting the criteria specified. 質問 # 79

What is the advantage to using the Veeam Advanced Data Fetcher during a backup job?

- A. Fewer blocks of data have to be read during the backup job
- B. Less impact on the VM during the snapshot consolidation
- **C. Double I/O performance compared to the VMware VDDK**
- D. Double deduplication performance compared to the VMware VDDK

正解: C

質問 # 80
