Reliable Study Salesforce PDII-JPN Questions, PDII-JPN Technical Training

Our PDII-JPN learning test was a high quality product revised by hundreds of experts according to the changes in the syllabus and the latest developments in theory and practice, based on historical questions and industry trends. Whether you are a student or an office worker, whether you are a rookie or an experienced veteran with years of experience, PDII-JPN Guide Torrent will be your best choice. The main advantages of our PDII-JPN study materials is high pass rate of more than 98%, which will be enough for you to pass the PDII-JPN exam.

Salesforce Sample Questions (Q28-Q33):

NEW QUESTION # 28

ユニバーサル コンテナは、複数の外部システムと統合する必要があります。このプロセスは、Salesforce でレコードが作成されるときに開始されます。リモートシステムでは、続行する前に Salesforce が応答を待つ必要はありません。

これを達成するために推奨される最適なソリューションは何ですか？

- A. プラットフォームイベント
- B. Outbound メッセージ
- C. PushTopic イベント
- D. HTTP コールアウトによるトリガー

Answer: A

Explanation:

Platform events provide a robust and scalable way to communicate changes and events from Salesforce to external systems, especially when there is no requirement for Salesforce to wait for a response. They are designed to support event-driven architectures and can handle high volumes of events that can be published and consumed by external systems. Outbound messages, on the other hand, are limited by the need for an acknowledgment response from the target system, which can introduce latency.

NEW QUESTION # 29

コンプライアンス目的のため、企業は組織内での製品の長期使用を追跡する必要があります。ログに記録する必要がある情報は複数のオブジェクトから収集されるため、時間が経つにつれて、数億のレコードが存在するようになりますと予測されています。

開発者はこれを実装するために何を使用する必要がありますか？

- A. 大きなオブジェクト
- B. フィールド監査証跡
- C. 監査証跡の設定
- D. フィールド履歴の追跡

Answer: A

Explanation:

Big objects provide a solution for storing and managing large amounts of data within Salesforce. They are ideal for compliance purposes when tracking long-term usage data that will accumulate over time into very large record counts.

NEW QUESTION # 30

以下のオプションのクエリと次の情報を考慮してください。

* これらのクエリでは、200,000 を超える取引先レコードがあると想定しています。

* これらのレコードには、論理的に削除されたレコードが含まれます。つまり、削除されたレコードがまだごみ箱に残っています。

* には外部 ID としてマークされているフィールドが 2 つあります。

アカウント。これらのフィールドは、customer_Number_c と ERR_Key_s です。

大量のデータに対して最適化されている 2 つのクエリはどれですか？

2 つの答えを選択してください

- A. `SELECT Id FROM Account WHERE Name != '' AND IsDeleted = false`
- B. `SELECT Id FROM Account WHERE Name != NULL`
- C. `SELECT Id FROM Accounts WHERE Name != ' ' AND Customer_Number_c = 'ValueA'`
- D. `SELECT ID FROM Account WHERE id IN :aListVariable`

Answer: C,D

NEW QUESTION # 31

開発者は、非同期プロセスのトリガーが正常に実行されたことをどのようにアサートする必要がありますか？

- **A. テスト クラスにすべてのテスト データを作成し、Test.startTest() と Test.stopTest() を呼び出してからアサーションを実行します。**
- B. Salesforce にレコードを挿入し、seeAllData=true を使用して、アサーションを実行します。
- C. すべてのテスト データを作成し、テスト クラスで @future を使用してから、アサーションを実行します。
- D. テスト クラスに at テスト データを作成し、System.runAs() を使用してトリガーを呼び出し、アサーションを実行します。

Answer: A

NEW QUESTION # 32

部分的なページ更新を実行する Ajax 動作を開始するために使用できる 3 つの Visualforce コンポーネントはどれですか？

3 つの答えを選択してください

- **A. <apex:commandButton>**
- B. <apex:actionsStatus>
- **C. <apex:commandLink>**
- **D. <apex:actionSupport>**
- E. <Apex:フォーム>

Answer: A,C,D

Explanation:

The three Visualforce components that can be used to initiate Ajax behavior to perform partial page updates are apex:commandLink, apex:commandButton, and apex:actionSupport. These components allow the developer to invoke an Apex controller method or a JavaScript function, and specify a apex:actionStatus or a apex:reRender attribute to update a part of the page without refreshing the whole page. The apex:commandLink and apex:commandButton components render as HTML links or buttons, respectively, and can be used to trigger an action when the user clicks on them. The apex:actionSupport component can be used to add Ajax support to any other component, and can be used to trigger an action when the user performs an event, such as mouseover, change, or blur. The apex:form component is not a valid answer, as it is used to enclose the components that need to interact with the server, but it does not initiate Ajax behavior by itself. The apex:actionStatus component is not a valid answer, as it is used to display the status of an Ajax request, such as a loading message or a spinner, but it does not initiate Ajax behavior by itself.
