Salesforce Order-Management-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Data Model: This topic equips the Salesforce Order Management Administrator Consultant to showcase knowledge of critical objects such as Order, Order Summary, Fulfillment Orders, and Return Orders. It involves establishing and tracing integrations with B2C Commerce or other systems, including custom attributes. Proficiency here is pivotal for ensuring seamless data flow and robust Order Management operations within complex business environments.
Topic 2	<ul style="list-style-type: none"> Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.
Topic 3	<ul style="list-style-type: none"> Order Management Basics: In this topic, the Salesforce Order Management Administrator Consultant learns to position Order Management effectively within Salesforce's core architecture. By articulating the extensible platform capabilities, the ability to integrate with third-party systems, and the overall value proposition, this knowledge helps highlight Order Management's seamless adaptability and efficiency. These insights are crucial for demonstrating business value during client engagements.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q106-Q111):

NEW QUESTION # 106

After deploying a new Lightning Web Component to an org, what should an administrator do to add the component to a Lightning Record Page?

- A. Go to Deploy LWC in Setup
- **B. Go to the page, edit it and drag the new component onto the page**
- C. Create a Metadata API (MDAPI) conversion file with the Command Line interface (CLI) then go to the page and adjust the positioning
- D. Navigate to the Page, Click on the "Custom Component Editor," Click "Publish" on the new component in the list and adjust the positioning

Answer: B

NEW QUESTION # 107

Which data type is the Status field on an Order Summary object?

- **A. Picklist**
- B. Number
- C. String
- D. Text

Answer: A

Explanation:

The Status field on an Order Summary object is a picklist data type. A picklist is a field that allows users to select one value from a predefined list of values. The Status field on an Order Summary object indicates the current state of the order, such as Draft, Activated, Completed, or Cancelled. The values for the Status field are defined in the Order Status picklist field on the Order object. Reference: Order Management Objects, [Picklist Fields]

NEW QUESTION # 108

Which two statements about the Order Summary object are accurate?

- **A. It is read-only for financial order data**
- B. It has a single shipping address to which all Order Items will be shipped
- **C. it does not exist without the original Order object**
- D. It can be deleted using the Delete button

Answer: A,C

Explanation:

Two statements about the Order Summary object that are accurate are:

It does not exist without the original Order object. An Order Summary is a record that represents the financial summary of an order that is received from an external system, such as B2C Commerce or B2B Commerce. An Order Summary has a master-detail relationship to the Order object, which means that it cannot exist without its parent Order record.

It is read-only for financial order data. An Order Summary contains financial order data, such as total amount, tax amount, discount amount, etc., that are populated from the external system when the order is created. These fields are read-only and cannot be edited in Order Management.

NEW QUESTION # 109

What are two reasons for using Flows instead of Apex code?

- A. Flows can be triggered by undelete events
- B. Flows have better performance options for large batches of records
- C. Flows provide a visual debug process
- D. Flows can be modified and created without a developer

Answer: C,D

Explanation:

Two reasons for using Flows instead of Apex code are:

Flows can be modified and created without a developer. Flows are declarative tools that allow administrators to build complex business logic using clicks instead of code. Flows do not require any programming skills or knowledge, and they can be easily modified and maintained by administrators.

Flows provide a visual debug process. Flows have a built-in debugger that allows administrators to test and troubleshoot their flows in a graphical interface. The debugger shows the flow execution path, the values of variables and sObject fields, and any errors or warnings that occur in the flow.

NEW QUESTION # 110

What type of relationship exists between FulfillmentOrder and Order Delivery Method?

- A. Junction (Many to Many)
- B. Lookup (Order Delivery Method)
- C. One-to-One Lookup (Location) FulfillmentFrom LocationId
- D. Master-Detail (Order Delivery Method)

Answer: B

Explanation:

The type of relationship that exists between FulfillmentOrder and Order Delivery Method is Lookup (Order Delivery Method). A Lookup field is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. In this case, a FulfillmentOrder has a Lookup field named Order Delivery Method that references an Order Delivery Method record. An Order Delivery Method is a record that represents a delivery option for fulfilling orders, such as standard shipping, express shipping, in-store pickup, etc. An Order Delivery Method can have many FulfillmentOrders associated with it, but a FulfillmentOrder can only have one Order Delivery Method.
