

# CTFL-AcT Original Questions & CTFL-AcT Training Online & CTFL-AcT Dumps Torrent

**Answers:**

1	C	11	A	21	D	31	D
2	B	12	D	22	B	32	A
3	B	13	D	23	A	33	B
4	A	14	A	24	B	34	D
5	D	15	B	25	C	35	A
6	A	16	A	26	C	36	C
7	D	17	A	27	C	37	C
8	B	18	D	28	C	38	A
9	D	19	B	29	D	39	A
10	C	20	C	30	A	40	B

2026 Latest DumpsFree CTFL-AcT PDF Dumps and CTFL-AcT Exam Engine Free Share: [https://drive.google.com/open?id=1m3S5MOPAejPDtFzYTEMjZch3\\_aHusxOH](https://drive.google.com/open?id=1m3S5MOPAejPDtFzYTEMjZch3_aHusxOH)

Our CTFL-AcT learning test was a high quality product revised by hundreds of experts according to the changes in the syllabus and the latest developments in theory and practice, based on historical questions and industry trends. Whether you are a student or an office worker, whether you are a rookie or an experienced veteran with years of experience, CTFL-AcT Guide Torrent will be your best choice. The main advantages of our CTFL-AcT study materials is high pass rate of more than 98%, which will be enough for you to pass the CTFL-AcT exam.

The CTFL-AcT exam is an internationally recognized certification program that covers the essential concepts of acceptance testing, such as test planning, execution, monitoring, and control. CTFL-AcT exam is developed and maintained by the International Software Testing Qualifications Board (ISTQB®) and is conducted by ISQI, a leading provider of software testing certification programs. CTFL-AcT exam is aimed at individuals who are involved in the software development lifecycle, including business analysts, testers, project managers, and quality assurance personnel.

One of the key benefits of taking the CTFL-AcT Exam is that it provides a recognized and respected certification for acceptance testing professionals. ISTQB Foundation Level - Acceptance Testing certification is recognized by employers around the world and can help individuals stand out in a competitive job market. Additionally, the knowledge and skills gained through preparing for and taking the exam can enhance an individual's ability to contribute to their organization's software development efforts.

## New CTFL-AcT Test Pass4sure, CTFL-AcT Exam Questions Vce

The price for CTFL-AcT training materials are reasonable, and no matter you are an employee in the company or a student at school, you can afford it. Besides CTFL-AcT exam materials are high quality and accuracy, therefore, you can pass the exam just one time. In order to strengthen your confidence for CTFL-AcT Exam Braindumps, we are pass guarantee and money back guarantee. We will give you full refund if you fail to pass the exam. We offer you free update for one year for CTFL-AcT training materials, and the update version will be sent to your email address automatically.

ISQI CTFL-AcT certification exam is a multiple-choice exam that consists of 40 questions. Candidates have 60 minutes to complete the exam, and a passing score of 65% is required to earn the certification. CTFL-AcT Exam is available in multiple languages, including English, German, Spanish, French, Italian, Portuguese, Japanese, and Chinese.

### ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q31-Q36):

#### NEW QUESTION # 31

Which TWO of the following statements about exploratory testing are most true?

- A. Exploratory testing is rather carried out by people with a good knowledge of the business domain, but not necessarily of the tested functionality
- B. Exploratory testing is an experience-based test technique which refines acceptance criteria into acceptance test cases
- C. Exploratory testing generally begins with the definition of the test charter that defines the detailed test L-' conditions
- D. Exploratory testing is achieved by combining product discovery, test design and execution, and results L- interpretation
- E. Exploratory testing implements time-boxed sessions to prioritize tests based on product risk analysis

**Answer: C,D**

Explanation:

Exploratory testing is a dynamic testing technique where learning, test design, execution, and interpretation occur simultaneously. It is especially useful when detailed requirements are unavailable or when testers rely on experience and intuition.

A is correct: Exploratory testing combines exploration, learning about the product, designing and executing tests on the fly, and interpreting the results - all within the same session.

E is also correct: Exploratory testing usually starts with a high-level test charter that defines the mission, objectives, or focus area for the session. It may not define specific test conditions, but it outlines the scope and intent.

Other options:

B: Not accurate - while timeboxing is used, exploratory testing typically relies on charters and experience rather than detailed product risk analysis to prioritize.

C: Incorrect - exploratory testing is not about refining acceptance criteria; that's part of ATDD.

D: Partially true but misleading - good business domain knowledge helps, but understanding the functionality is also important in exploratory testing.

#### NEW QUESTION # 32

Which one of the following combinations between high-level security requirements and security testing techniques matches BEST?

- A. Threat modeling to test the organizational security policy
- B. Penetration testing to test the validation and sanitization of input data
- C. Fuzzing to test the performance of cryptographic algorithms
- D. Static vulnerability analysis to test authentication and authorization mechanisms

**Answer: D**

Explanation:

Security testing ensures the system protects data and maintains intended behavior under potential attacks.

Different techniques address specific security goals.

Option A is correct: Static vulnerability analysis inspects code or architecture without executing it, identifying weaknesses in mechanisms such as authentication (e.g., login controls) and authorization (e.g., access permissions). These mechanisms are foundational security requirements.

Other options:

B is misleading - penetration testing simulates attacks, but input validation is more often verified with fuzzing or code review.

C is incorrect - fuzzing tests input handling, not the performance of cryptographic algorithms.

D is incorrect - threat modeling is a design-time activity to identify risks; it's not used to test policies directly.

A). Static vulnerability analysis to test authentication and authorization mechanisms

### NEW QUESTION # 33

What is considered as good practice regarding business process modeling?

- A. Links to requirements or risks should be well separated from the workflow description.
- B. Business analysts should finalize their process models before showing them to acceptance testers.
- C. Keeping all model element in one diagram considerably improves the readability of BPMN models.
- **D. BPMN diagrams and DMN tables should include information such as traceability to user stories.**

**Answer: D**

### NEW QUESTION # 34

You are leading a brand new project team whose members are coming from all over the organization and have no former experience in working together. You need to build a common vision and team spirit. What workshop would fit BEST:

- A. You ask every member in turn to write down three things he/she likes and dislikes in the organization and to post them on a wall. A volunteer is then chosen to read randomly some posts that are then discussed with the group.
- **B. You invite the team members and ask them to design their own (team-wise) emblem representing their values, beliefs, goals, tasks together than a common motto.**
- C. You draw a staircase with 11 steps, each of them representing a major milestone of the project. The bottom of the stairs corresponds to the first day of the project and the upper step means that the project is released. You locate the present situation in the top of the stairs. The team is asked to identify and discuss the major steps downwards.
- D. You invite every member in turn to describe his/her past experience and his/her major achievements in the organization or in their former job.

**Answer: B**

### NEW QUESTION # 35

Which one of the following statements regarding acceptance criteria is true?

- A. Acceptance criteria relate generally to some business goals and sometimes to some business needs
- **B. For each requirement or user story, the acceptance criteria refine and specify what is expected**
- C. Acceptance criteria are used to measure code coverage of the test object
- D. For each requirement of user story, the acceptance criteria refine and specify how to test it

**Answer: B**

Explanation:

Acceptance criteria define the conditions under which a user story or requirement is considered complete and acceptable to stakeholders. They clarify the expected behavior, outcomes, or attributes of the system.

Option C is correct because it accurately reflects that acceptance criteria are used to specify what is expected from the system in relation to a given requirement or user story. This ensures a shared understanding among developers, testers, and business stakeholders.

Other options:

A is vague and misleading - acceptance criteria relate directly to specific stories or features, not generally to high-level goals.

B is partially correct but limited - while acceptance criteria help define test conditions, their purpose is broader than just test specification.

D is incorrect - acceptance criteria are not related to code coverage, which is a technical test metric.

C). For each requirement or user story, the acceptance criteria refine and specify what is expected
