CompTIA A+ Cheat Sheet 220-1201 and 220-1202

You've made an excellent choice aiming for the CompTIA A+ certification. It goes without saying that you want to excel in these exams. A+ gives you a solid footing as you embark on a new career in IT, and it contains essential IT knowledge for a journey into cyber security.

As A+ covers many technical topics broadly, it can be challenging to recall fine details, especially when troubleshooting problems described in the exam questions.

Therefore, we've prepared this CompTIA A+ cheat sheet for you as an ongoing revision checklist and to provide direction in your exam preparation. When you're ready, let's review our must-know concepts below.

안심하시고Fast2test를 선택하게 하기 위하여, Fast2test에서는 이미CompTIA 220-1202인증시험의 일부 문제와 답을 사이트에 올려놴으니 체험해보실 수 있습니다. 그러면 저희한테 신뢰가 갈 것이며 또 망설임 없이 선택하게 될 것입니다. 저희 덤프로 여러분은 한번에 시험을 패스할 수 있으며 또 개인시간도 절약하고 무엇보다도 금전상으로 절약이 제일 크다고 봅니다. Fast2test는 여러분들한테 최고의CompTIA 220-1202문제와 답을 제공함으로 100%로의 보장 도를 자랑합니다, 여러분은CompTIA 220-1202인증시험의 패스로 IT업계여셔도 또 직장에서도 한층 업그레이드되실 수 있습니다. 여러분의 미래는 더욱더 아름다울 것입니다.

경쟁율이 치열한 IT업계에서 아무런 목표없이 아무런 희망없이 무미건조한 생활을 하고 계시나요? 다른 사람들이 모두 취득하고 있는 자격증에 관심도 없는 분은 치열한 경쟁속에서 살아남기 어렵습니다. CompTIA인증 220-1202 시험패스가 힘들다한들Fast2test덤프만 있으면 어려운 시험도 쉬워질수 밖에 없습니다. CompTIA인증 220-1202덤프에 있는 문제만 잘 이해하고 습득하신다면CompTIA인증 220-1202시험을 패스하여 자격증을 취득해 자신의 경쟁력을 업그레이드하여 경쟁시대에서 안전감을 보유할 수 있습니다.

220-1202완벽한 인증덤프, 220-1202최고품질 덤프샘플문제 다운

Fast2test의 경험이 풍부한 IT전문가들이 연구제작해낸 CompTIA인증 220-1202덤프는 시험패스율이 100%에 가까워 시험의 첫번째 도전에서 한방에 시험패스하도록 도와드립니다. CompTIA인증 220-1202덤프는CompTIA인증 220-

1202최신 실제시험문제의 모든 시험문제를 커버하고 있어 덤프에 있는 내용만 공부하시면 아무런 걱정없이 시험에 도전할수 있습니다.

최신 A+ 220-1202 무료샘플문제 (Q117-Q122):

질문 # 117

After a technician upgrades the RAM on a user's workstation, the system shows a "No boot device found" message. Which of the following is most likely the cause?

- A. The boot order needs to be changed
- B. The installation disk is not available
- C. The SATA HDD power cable is disconnected
- D. The drive needs to be reformatted

정답: C

설명:

The correct answer is B. The SATA HDD power cable is disconnected, because RAM upgrades require opening the case, which can easily result in accidentally loosening or disconnecting internal cables. If the system cannot detect the boot drive, it will display a "No boot device found" error.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, one of the first troubleshooting steps after hardware changes is to verify that all internal cables-especially SATA data and power cables- are securely connected. A disconnected drive will not be detected by the BIOS or UEFI firmware.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide explains that boot order changes are less likely unless the technician explicitly modified BIOS settings. Similarly, reformatting a drive would not occur during a RAM upgrade.

The Mike Meyers / Mark Soper Lab Manual reinforces that physical connection issues are among the most common causes of boot failures following hardware maintenance. A disconnected power cable prevents the hard drive from spinning up, making it invisible to the system.

Because the issue appeared immediately after opening the case for a RAM upgrade, the most likely cause is a disconnected SATA power cable, making B the correct answer.

질문 # 118

A technician is helping to create a desktop backup policy for the company. The requirements include ensuring that the backups work as intended and recovery is possible. Which of the following routine tasks should the technician include in the policy to meet these requirements?

(Choose two.)

- A. Incremental backup
- B. Backup testing
- C. Differential backup
- D. Backup reconfiguration
- E. Full backup
- F. Purging old backups

정답: B,E

설명:

Backup testing verifies that backups are valid and can be successfully restored, ensuring recovery is possible.

Full backup creates a complete copy of all data, providing a reliable baseline needed for successful restoration.

질문 # 119

A user brings their personal laptop into the office. They connect their computer to the docking station. When the user tries to use a search engine, the page displays the following message:

This device is quarantined and is not connected to the domain. Contact the IT administrator for further assistance.

Which of the following is most likely the issue?

- A. Network resources are blocked.
- B. Malware is present.

- C. The docking station Ethernet cable is unplugged.
- D. The URL was entered incorrectly.

정답: A

설명:

The message indicates the device has been placed into a network quarantine because it is not a domain-joined or authorized system. In this state, network resources are blocked, and the device is isolated until IT approves or remediates it.

질문 # 120

A user's computer is running slowly. Task Manager shows:

Disk: 2%

Network: 12%

GPU: 15%

CPU: 70%

Memory: 97%

Which of the following would a technician most likely do to resolve the issue?

- **A. Close unnecessary programs**
- B. Upgrade the network connection
- C. Delete temporary files
- D. Clear browser cached data

정답: A

설명:

Comprehensive and Detailed Explanation From Exact Extract:

Memory usage is critically high, suggesting many applications or background processes. Closing unnecessary programs will immediately free up RAM.

From Travis Everett - All-in-One Exam Guide:

"High memory usage with moderate CPU load usually means too many applications are open. Close unnecessary apps or use Task Manager to end processes."

질문 # 121

An end user sees frequent onscreen messages from a retail site they visited a week ago. A technician investigates and determines that the pop-up blocker is turned on. Which of the following should the technician do next?

- A. Uninstall and reinstall the browser
- B. Clear the browser cache
- C. Reset the browser to its default settings
- **D. Turn off notifications in the browser**

정답: D

설명:

The correct answer is B. Turn off notifications in the browser, because the described behavior matches browser notification abuse, not traditional pop-ups. Modern browsers allow websites to request permission to send notifications. If a user previously allowed notifications from a retail site, the site can continue sending onscreen alerts even when pop-up blockers are enabled.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, browser notification permissions are separate from pop-up blocking settings. Pop-up blockers prevent new browser windows or tabs from opening, but they do not block push notifications that were previously approved by the user. These notifications can persist long after visiting a site.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide explains that one of the first troubleshooting steps for repeated browser messages is to review and disable site notification permissions.

This directly targets the root cause without affecting browser configuration or user data.

The Mike Meyers / Mark Soper Lab Manual reinforces that resetting or reinstalling the browser is an excessive step unless configuration corruption is suspected. Clearing cache removes stored files but does not revoke notification permissions.

Because the messages originate from previously allowed browser notifications, the most appropriate and targeted fix is to disable notifications in the browser, making B the correct answer.
