Trustworthy CTFL-AT Exam Torrent | CTFL-AT Reliable Dumps Files

If you find someone around has a nice life go wild, it is because that they may have favored the use of study & work method different from normal people. CTFL-AT dumps torrent files may be the best method for candidates who are preparing for their IT exam and eager to clear exam as soon as possible. People's success lies in their good use of every change to self-improve. Our CTFL-AT Dumps Torrent files will be the best resources for your real test. If you choose our products, we will choose efficient & high-passing preparation materials.

ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q80-Q85):

NEW QUESTION # 80

You are working in a team preparing a bank loan application. Your task is the preparation of acceptance tests for the following user story:

"IF a customer needs a loan for less than 50,000 Euros and they have made repayments regularly (without any delay) and the customer's monthly income is more than 3000 Euros for the last year, THEN the bank will accept the loan request; in other cases, the bank will not accept the request. A customer assistant is responsible for preparing data for approval but the approval is done by the bank manager." Which of the following test cases can be treated as acceptance test criteria for the above user story?

- 1) As a customer assistant I can log in to the system and check the history of the customer account for the last year.
- 2) As a customer assistant I can log in to the system and check the history of the customer debts and repayments.
- 3) As a customer assistant I can log in to the system and change my password.
- 4) As a bank manager I can log in to the system and receive the information of all requests waiting for approval.
- 5) As a bank manager I can log in to the system and decide whether to approve a loan for a customer.
- 6) As a bank manager I can log in to the system within 10 seconds.

- A. Acceptance test criteria are 1, 2, 3 and 6
- B. Acceptance test criteria are 1, 3, 4 and 5
- C. Acceptance test criteria are 1, 2, 4 and 5
- D. Acceptance test criteria are 2, 4, 5 and 6

Answer: C

NEW QUESTION # 81

Which two of the following statements are CORRECT with regards to test automation on agile projects?

- 1) Every test developed for past iterations is kept and executed as part of a regression suite for each new release of code.
- 2) It would be very difficult to ensure high quality in an agile project without test automation.
- 3) Automated acceptance tests are run regularly as part of the continuous integration full system build.
- 4) Automated regression suites are only run for the final release of code.
- 5) In agile projects, the results from automated acceptance tests provide feedback on the overall product quality.

- A. 2, 5
- B. 3, 4
- C. 1, 3
- D. 2, 3

Answer: A

NEW QUESTION # 82

Which two of the following statements are CORRECT with regards to test automation on agile projects?

- 1) Every test developed for past iterations is kept and executed as part of a regression suite for each new release of code.
- 2) It would be very difficult to ensure high quality in an agile project without test automation.
- 3) Automated acceptance tests are run regularly as part of the continuous integration full system build.
- 4) Automated regression suites are only run for the final release of code.
- 5) In agile projects, the results from automated acceptance tests provide feedback on the overall product quality.

- A. 2, 5
- B. 3, 4
- C. 1, 3
- D. 2, 3

Answer: A

Explanation:

Test automation is essential for agile projects, as it enables fast and frequent feedback on the quality of the product. Without test automation, it would be very difficult to ensure high quality in an agile project, as manual testing would be too slow and costly to keep up with the pace of development¹². Automated acceptance tests are one of the key types of test automation on agile projects, as they verify that the user stories are implemented correctly and that the product meets the customer's expectations. Automated acceptance tests are run regularly as part of the continuous integration full system build, and the results provide feedback on the overall product quality¹². Therefore, statements 2 and 5 are correct with regards to test automation on agile projects. References: 1: ISTQB Foundation Level Agile Tester Syllabus, Section

NEW QUESTION # 83

Which of the following statements about the Planning poker test estimate technique are CORRECT?

- 1) Planning poker is a consensus based technique using a deck of cards.
- 2) A low test estimate usually means the story should be broken down into multiple smaller stories.
- 3) A high test estimate usually means the story should be broken down into multiple smaller stories.
- 4) One poker round is played and then consensus has to be reached.
- 5) The risk level of each backlog item should be decided before the poker session.

- A. 1, 2, 4
- **B. 1, 3, 5**
- C. 1, 2, 3
- D. 2, 3, 4

Answer: B

Explanation:

Planning poker is a consensus-based technique for agile estimation, using a deck of cards with predefined numerical values, usually based on the Fibonacci sequence or a modified version¹2. Therefore, statement 1 is correct. A high test estimate usually means that the user story or task is too complex, ambiguous, or risky, and should be broken down into multiple smaller stories that are easier to understand and estimate¹3. Therefore, statement 3 is correct. The risk level of each backlog item should be decided before the poker session, as it can affect the estimation process and the prioritization of the work¹4. Therefore, statement 5 is correct.

Statement 2 is incorrect, as a low test estimate usually means that the user story or task is simple, clear, and well-defined, and does not need to be broken down further¹3. Statement 4 is incorrect, as planning poker can involve multiple rounds of estimation, reveal, and discussion, until the team reaches a consensus or agrees to defer the item¹2. NEW QUESTION # 84

Which of the following statements would you expect to be the MOST direct advantage of the whole-team approach?

- A. Having at least once a day an automated build and test process that detects integration errors early and quickly.
- B. Avoiding requirements misunderstandings which may not have been detected until later in the development cycle when they are more expensive to fix.
- C. Reducing the involvement of business representatives because of the increased communication and collaboration between testers and developers.
- **D. Capitalizing on the combined skills of business representatives, testers and developers working together to contribute to project success.**

Answer: D

Explanation:

Explanation

The whole-team approach is a principle of agile testing that involves everyone with different knowledge and skills to ensure project success. The whole-team approach means that the business representatives, testers, and developers work together in every step of the development process, from planning to delivery. The whole-team approach aims to enhance communication and collaboration within the team, leverage the various skill sets of the team members, and make quality everyone's responsibility¹2. Therefore, the statement C is the most direct advantage of the whole-team approach, as it captures the essence of the principle and its benefits. The other statements are not directly related to the whole-team approach, or are incorrect. Statement A is about continuous integration, which is a practice of agile development that involves having at least once a day an automated build and test process that detects integration errors early and quickly. Continuous integration is not a direct consequence of the whole-team approach, although it may be facilitated by it¹3. Statement B is about avoiding requirements misunderstandings, which may be a benefit of the whole-team approach, but not the most direct one. The whole-team approach does not only focus on requirements, but also on design, implementation, testing, and delivery. Moreover, avoiding requirements misunderstandings may also depend on other factors, such as the quality of the user stories, the use of acceptance criteria, and the feedback from the customers and users¹4. Statement D is incorrect, as it contradicts the whole-team approach. The whole-team approach does not reduce the involvement of business representatives, but rather increases it.

Business representatives are an integral part of the whole-team approach, as they provide the vision, the value, and the validation of the product. They collaborate with the testers and developers to define the features, prioritize the backlog, and verify the outcomes¹².
