Our product is of high quality and the passing rate and the hit rate are both high.

Salesforce Certified MuleSoft Developer Sample Questions (Q209-Q214):

NEW QUESTION # 209

Refer to the exhibits.

The web client sends a POST request to the ACME Order API with an XML payload. An error is returned. What should be changed in the request so that a success response code is returned to the web client?

- A. Set a request header with the name Content-Type to a value of application/octet-stream
- B. Set a response header with the name Content-Type to a value of application/octet-stream
- **C. Set a request header with the name Content-Type to a value of application/xml**
- D. Set a response header with the name Content-Type to a value of application/xml

Answer: C

Explanation:

The HTTP 415 Unsupported Media Type client error response code indicates that the server refuses to accept the request because the payload format is in an unsupported format. The format problem might be due to the request's indicated Content-Type or Content-Encoding, or as a result of inspecting the data directly. As per RAML input is expected in application/xml. Hence correct answer is Set a request header with the name Content-Type to a

NEW QUESTION # 210

What is the correct way to format the decimal 200.1234 as a string to two decimal places?

- **A. 200.1234 as String {format: ".0#"}**
- B. 200.1234 as string {format: ".0#"}
- C. 200.1234 as string as format: ".0#"
- D. 200.1234 as String as format: ".0#"

Answer: A

Explanation:

Correct answer is 200.1234 as String {format: ".0#"} . Rest all options are not syntactically correct.

NEW QUESTION # 211

Refer to the exhibits.

□ A Mule application contains a Choice router. What is logged when the flow completes?

- A. "REGION"
- **B. US**
- C. EU
- D. ["US", "EU"]

Answer: B

NEW QUESTION # 212

Refer to the exhibit.

□ What can be added to the flow to persist data across different flow executions?

- A. session variables
- **B. Key/value pairs in the ObjectStore**
- C. properties of the Mule runtime app object
- D. Properties of the Mule runtime flow object

Answer: B

Explanation:

An object store is a facility for storing objects in or across Mule applications. Mule runtime engine (Mule) uses object stores to persist data for eventual retrieval. Internally, Mule uses object stores in various filters, routers, and other message processors that need to store states between messages.

Object stores are available in all deployment targets. If you deploy your application to CloudHub, you can also use Object Store V2.

Correct answer is Key/value pair in Object store

MuleSoft Documentation reference : <https://docs.mulesoft.com/mule-runtime/4.3/mule-object-stores#use-cases>

NEW QUESTION # 213

Refer to the exhibits.

A web client submits a request to below flow. What is the output at the end of the flow?

Diagram Description automatically generated

- Graphical user interface, text, application, email Description automatically generated
- Graphical user interface, text, application, email Description automatically generated
-

- A. String
- B. Object
- C. Java
- D. XML

Answer: A

Explanation:

String is the correct answer as XML is of an Object type String

NEW QUESTION # 214

.....
