Haben Sie keine gute Methode, Nutanix NCP-MCI-6.10 Zertifizierungsprüfungen vorzubereiten? Nutanix NCP-MCI-6.10 Zertifizierungsprüfung ist eine der bedeutendsten Zertifizierung bei IT-Zertifizierungen. Seit Jahren hat IT-Branchen die Aufmerksamkeit der ganzen Welt gewonnen. Und es wird auch ein unverzichtbarer Bestandteil des modernen Lebens. Und Nutanix Zertifizierungen sind schon international anerkannt. Deshalb entwickeln viele IT-Fachleute ihre Kenntnisse und Fähigkeiten durch Nutanix exam. Und NCP-MCI-6.10 Zertifizierungsprüfung ist eine der wichtigsten Prüfung. Diese Zertifizierung kann Leuten größere Interessen bringen.

Nutanix NCP-MCI-6.10 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> • Configure Disaster Recovery and Data Protection within a Nutanix Multicloud Environment: This section of the exam measures the skills of Disaster Recovery Specialists and Cloud Engineers and covers configuring protection policies and domains for data security and recovery. Candidates need to identify the right entities for protection, schedule backups, define retention policies, and set up replication to remote sites. Recovery plans must be configured and executed with proper scripting, network mapping, and failover strategies. Metro replication requires understanding failover methodologies, comparing solutions on different hypervisors, and preventing split-brain scenarios. Effective disaster recovery planning ensures minimal downtime and data integrity across environments.
Thema 2	<ul style="list-style-type: none"> • Conduct Custom Monitoring within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Analysts and Systems Engineers and covers custom monitoring for optimized performance management. Candidates must analyze performance charts, set retention policies, create custom service level agreements (SLAs), and manage storage based on policies. Creating reports involves identifying the required type, selecting generation frequency, determining retention properties, and customizing report formats for different monitoring needs. Effective monitoring ensures better resource utilization, system efficiency, and proactive issue resolution within the multi-cloud environment.
Thema 3	<ul style="list-style-type: none"> • Troubleshoot a Nutanix Multicloud Environment: This section of the exam measures the skills of Technical Support Engineers and IT Operations Specialists and covers diagnosing and resolving common issues within a Nutanix multi-cloud environment. Troubleshooting protection policies and recovery plans requires identifying network mapping failures, vNIC issues, script execution problems, and connectivity failures. Metro replication troubleshooting involves addressing naming conventions, network limitations, and replication states. Security issues in AOS and Prism Central must be resolved by managing CVM communications, security warnings, and log analysis. LCM operations require diagnosing failures in inventory updates and version upgrades. Performance troubleshooting involves analyzing logs, reading performance charts, and adjusting VM configurations to meet performance needs.

Thema 4	<ul style="list-style-type: none"> • Manage VMs within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Administrators and Virtualization Engineers and covers managing virtual machines (VMs) within a Nutanix multicloud environment. It includes creating and updating VMs by determining hardware requirements, boot modes, sizing, and configuration based on application needs. Candidates must understand how to deploy VMs using templates, snapshots, and image configurations, ensuring the correct formats for importing and exporting VMs. Migration processes require knowledge of prerequisites, storage, network settings, and software compatibility. Additionally, configuring VM categories and attributes is essential for proper organization and management within the environment, ensuring alignment with labels, storage policies, and security settings.
Thema 5	<ul style="list-style-type: none"> • Manage Clusters within a Nutanix Multicloud Environment: This section of the exam measures the skills of Infrastructure Engineers and Systems Administrators and covers the administration of Nutanix clusters. Storage management includes creating, reading, updating, and deleting storage containers and volume groups. Configuring AOS and Prism Central settings involves authentication, SSL certificate management, IAM role-based access control, and configuring network segmentation. Network administration procedures focus on creating VLAN-backed subnets, virtual switches, and load-balancing policies while monitoring NIC usage. Lifecycle management includes performing hardware and software updates and maintaining firmware. Hardware maintenance involves adding or removing nodes and physical disks while ensuring proper upgrades and replacements. Intelligent operations require configuring capacity policies, discovering application relationships, and simulating scenarios to optimize performance.

NCP-MCI-6.10 Fragen & Antworten & NCP-MCI-6.10 Studienführer & NCP-MCI-6.10 Prüfungsvorbereitung

Wenn Sie sich für die Schulungsprogramme zur Nutanix NCP-MCI-6.10 Zertifizierungsprüfung interessieren, können Sie im Internet teilweise die Demo zur Nutanix NCP-MCI-6.10 Zertifizierungsprüfung kostenlos als Probe herunterladen. Wir werden den Kunden einen einjährigen kostenlosen Update-Service bieten.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) NCP-MCI-6.10 Prüfungsfragen mit Lösungen (Q89-Q94):

89. Frage

LCM Framework Check

A Lcm prechecks detected 3 issues that would cause upgrade failures.

Check test_lacp_configuration' failed: test_lacp_configuration: Unable to find Vcenter details for connection.

Please refer to KB 14277 Check test_esx_ha_enabled' failed: Unable to find Vcenter details for connection

Check test_es_entering_mm_pinned_vms' failed: Unable to find Vcenter details for connection X LCM Framework Check

An administrator is attempting to upgrade the NIC firmware on a Nutanix cluster and sees the error displayed in the exhibit.

Which log is the most appropriate to analyze the LCM precheck failure?

- A. 1cm_wget.out
- B. genesis.out
- C. 1cm_ops.out
- D. catalog.out

Antwort: C

Begründung:

The LCM (Life Cycle Manager) precheck failures in this scenario indicate an inability to connect to vCenter to validate ESXi-specific checks, such as LACP configuration, HA, and pinned VMs. The appropriate log to analyze the details of the LCM precheck failures is the 1cm_ops.out log.

From the Nutanix Enterprise Cloud Administration (ECA) course materials:

"The 1cm_ops.out log file contains detailed output and error information related to LCM operations, including prechecks, execution, and post-checks. This log is essential for troubleshooting LCM framework failures and understanding the root cause of any issues preventing upgrades."

90. Frage

An administrator started an LCM upgrade of the AHV hosts and realized that the upgrades will continue beyond their planned maintenance window.

Which feature should be leveraged to prevent additional updates from occurring?

- A. Cancel the LCM tasks via the Ergon command line (ecli)
- B. Restart genesis on the cluster to restart the LCM service
- C. Use the Stop Update feature in LCM
- D. Run the .py script

Antwort: C

Begründung:

Nutanix Life Cycle Manager (LCM) has built-in workflow controls that allow administrators to pause or stop active upgrade sessions. The documentation states:

"Administrators can use the Stop Update option in the LCM UI to halt further job progression. This safely stops the upgrade pipeline without disrupting already-applied updates." More internal behavior details:

- * Stop Update immediately prevents LCM from starting additional node or component upgrades.
- * It safely terminates queue execution while maintaining cluster consistency.
- * It does not require command-line interaction or service restarts.

Using .py scripts is not recommended and is reserved for engineering workflows. Restarting Genesis or canceling tasks via ecli may interrupt LCM activities but do not cleanly stop the scheduled upgrade workflow.

The supported and correct control method is the built-in Stop Update button.

91. Frage

An administrator is trying to configure Metro Availability between Nutanix ESXi-based clusters. However, the Compatible Remote Screenshot does not list all required storage containers.

Which two reasons could be a cause for this issue? (Choose two.)

- A. The destination storage container is not empty.
- B. Source and destination hardware are from different vendors.
- C. The remote site storage container has compression enabled.
- D. Both storage containers must have the same name.

Antwort: A,D

Begründung:

For Metro Availability to work properly, the storage containers at both the primary and secondary sites must meet certain requirements:

- * The storage containers must have the same name (Option D). This ensures that replication and failover work seamlessly. If the names do not match, the storage containers will not be listed as compatible.
- * The destination storage container must be empty (Option C). Metro Availability requires a clean storage container at the secondary site to receive data. If the container already contains data, it cannot be used.
- * Option A is incorrect: Different vendor hardware does not affect Metro Availability compatibility.
- * Option B is incorrect: Compression does not affect Metro Availability compatibility. However, it is recommended to keep compression settings aligned between sites.

92. Frage

A user has created a report in the Intelligent Operations Analysis Dashboard but forgot to download it. After logging back into Prism Central, the administrator finds that the report is no longer available.

Which option explains this behavior?

- A. The user-generated report was archived.

- B. Reports are automatically deleted after 24 hours.
- C. The report is stored in the cluster's Prism Element.
- D. A user with Cluster Viewer role deleted the report.

Antwort: B

Begründung:

The Intelligent Operations and Analysis Dashboard in Prism Central supports generating ad-hoc reports.

These reports are temporary artifacts and are not designed for long-term storage. Internal documentation states, "Generated reports are retained for 24 hours and then automatically purged by the system to prevent report accumulation and data bloat." This automatic cleanup is part of the reporting subsystem and applies regardless of user role or storage location. The reports are not stored in Prism Element, nor are they archived automatically. Therefore, after the 24-hour retention window, the system removes them, explaining why the user could not find the previously generated report.

93. Frage

Which predefined view should be leveraged in Prism Central Intelligent Operations to determine which VM is consuming too many resources and causing other VMs to starve?

- A. Overprovisioned VMs List
- B. Bully VMs List
- C. Inactive VMs List
- D. Constrained VMs List

Antwort: B

Begründung:

The Bully VMs Listview in Prism Central's Intelligent Operations identifies VMs that are consuming excessive resources (CPU, memory, or storage IO) and causing resource starvation for other VMs.

From the Nutanix ECA documentation:

"Bully VMs List identifies virtual machines with high resource consumption, enabling administrators to investigate and take action to prevent performance degradation in other VMs." The other options:

* A (Constrained VMs): Shows VMs that are being starved of resources.

* C (Inactive VMs): Shows VMs that are using little to no resources.

* D (Overprovisioned VMs): Shows VMs with allocated resources beyond actual usage.

94. Frage

.....

Nutanix NCP-MCI-6.10 Zertifizierungsprüfung ist eine seltene und wertvolle Gelegenheit, mit der Sie sich verbessern können. Es gibt viele IT-Profis, die an dieser Prüfung teilnehmen. Durch Nutanix NCP-MCI-6.10 Zertifizierungsprüfung können Sie Ihre IT-Kenntnisse verbessern. Unsere ITZert bietet Ihnen Prüfungsfragen zu Nutanix NCP-MCI-6.10 Zertifizierung. Das professionelle IT-Team aus ITZert wird Ihnen die neuesten Prüfungsunterlagen bieten, damit Sie ihre Träume verwirklichen. ITZert verfügt über die qualitativ hochwertigsten und neuesten Schulungsunterlagen zur Nutanix NCP-MCI-6.10 Zertifizierungsprüfung und sie können Ihnen helfen, die Nutanix NCP-MCI-6.10 Zertifizierungsprüfung erfolgreich zu bestehen. Nutanix NCP-MCI-6.10 Zertifizierungsprüfung ist eine eher wertvolle Prüfung in der IT-Branche. Und viele IT-Fachleute beteiligen sich an dieser Prüfung. Durch die Nutanix NCP-MCI-6.10 Zertifizierungsprüfung werden Ihre beruflichen Fertigkeiten verbessert. Unser ITZert bietet Ihnen die Trainingsfragen zur Nutanix NCP-MCI-6.10 Zertifizierungsprüfung.
