## CompTIA SecAI+ Certification Exam Sample Questions (Q46-Q51):

### NEW QUESTION # 46

A cybersecurity analyst wants to choose a machine learning (ML) model to classify log entries while providing the best explainability. Which of the following models should the analyst use?

- A. Generative adversarial network (GAN)
- B. Neural networks
- **C. Decision trees**
- D. Large language model (LLM)

**Answer: C**

**Explanation:**

Decision trees provide clear and interpretable decision paths, making them highly explainable compared to complex models like neural networks or GANs. This makes them the best choice for classifying log entries when explainability is a priority.

#### NEW QUESTION # 47

A company discovers that attackers exploited an unpatched vulnerability in a web server. Which control BEST prevents this?

- A. Configuration baselines
- **B. Patch management**
- C. Password complexity enforcement
- D. WAF rules

**Answer: B**

Explanation:

Timely patching directly prevents exploitation of known vulnerabilities.

#### NEW QUESTION # 48

A recently deployed AI system becomes persistently unavailable. A restart temporarily fixes the issue, but the issue happens again. Upon examination of application programming interface (API) logs, an analyst finds that external calls continued to use system resources after the action completed.

Which of the following is the best way to improve availability of the system?

- A. Implementing multifactor authentication (MFA)
- B. Increasing system memory
- C. Creating token limits
- **D. Enforcing session expiration**

**Answer: D**

Explanation:

The persistent unavailability is caused by external calls consuming resources even after completion, indicating sessions are not being closed. Enforcing session expiration ensures unused sessions are terminated, freeing resources and improving system availability.

#### NEW QUESTION # 49

An AI security team must assess the probability of an attack on its new system and the impact associated with such an attack. Which of the following threat-modeling resources best addresses the threat landscape for machine learning (ML)?

- A. Open Worldwide Application Security Project (OWASP)
- B. Massachusetts Institute of Technology (MIT) risk repository
- **C. MITRE Adversarial Threat Landscape for AI Systems (ATLAS)**
- D. Common Vulnerabilities and Exposures (CVE) AI working group

**Answer: C**

Explanation:

MITRE ATLAS is specifically designed to capture adversarial tactics, techniques, and procedures (TTPs) targeting machine learning systems. It helps organizations assess both the probability and impact of AI/ML-related attacks, making it the most relevant threat-modeling resource.

#### NEW QUESTION # 50

Customer feedback for an AI chatbot has a high-rate of non-answers, which is causing higher central processing unit (CPU) utilization. Which of the following should be implemented?

- A. Guardrails
- **B. Response confidence level**
- C. Cost monitoring
- D. Prompt logging

**Answer: B**

Explanation:

Implementing a response confidence level ensures the chatbot only provides answers when the model is sufficiently confident. This reduces irrelevant or empty responses, improving user experience and lowering unnecessary CPU utilization.
