

# H13-321\_V2.5 Valid Test Experience - H13-321\_V2.5 Reliable Exam Labs

DOWNLOAD the newest DumpStillValid H13-321\_V2.5 PDF dumps from Cloud Storage for free:  
<https://drive.google.com/open?id=1A-YIJGa7kiy9s3IOybBHTABcciAiMluG>

Our HCIP-AI-EI Developer V2.5 study question has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit H13-321\_V2.5 exam questions. It points to the exam heart to solve your difficulty. With a minimum number of questions and answers of H13-321\_V2.5 Test Guide to the most important message, to make every user can easily efficient learning, not to increase their extra burden, finally to let the H13-321\_V2.5 exam questions help users quickly to pass the exam.

If you have interests with our H13-321\_V2.5 practice materials, we prefer to tell that we have contacted with many former buyers of our H13-321\_V2.5 exam questions and they all talked about the importance of effective H13-321\_V2.5 practice material playing a crucial role in your preparation process. Our practice materials keep exam candidates motivated and efficient with useful content based wholly on the real H13-321\_V2.5 Guide materials.

## H13-321\_V2.5 Reliable Exam Labs | H13-321\_V2.5 Exam Tips

Our H13-321\_V2.5 preparation exam can provide all customers with the After-sales service guarantee. The After-sales service guarantee is mainly reflected in to many aspects. The most important one is that we can promise that our H13-321\_V2.5 study questions will meet the customer demand for privacy protection. As is known to us, the privacy protection of customer is very important, No one wants to breach patient. So our H13-321\_V2.5 Actual Exam pays high attention to protect the privacy of all customers.

## Huawei HCIP-AI-EI Developer V2.5 Sample Questions (Q52-Q57):

### NEW QUESTION # 52

The accuracy of object location detection can be evaluated using the intersection over union (IoU) value, which is a ratio. The denominator is the overlapping area between the prediction bounding box and ground truth bounding box, and the numerator is the area of union encompassed by both boxes.

- A. FALSE
- B. TRUE

**Answer: A**

Explanation:

TheIoUmetric is defined as:

$$IoU = \frac{\text{Area of Overlap}}{\text{Area of Union}}$$

\* Numerator:Area of overlap between the predicted bounding box and the ground truth bounding box.

\* Denominator: Area of union of both bounding boxes.

The statement given in the question reverses the numerator and denominator, which is why it is incorrect. IoU is crucial for object detection evaluation, and higher IoU values indicate better localization accuracy.

Exact Extract from HCIP-AI EI Developer V2.5:

"Intersection over Union (IoU) is calculated as the ratio of the intersection area between prediction and ground truth bounding boxes to their union area." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Object Detection Metrics

### NEW QUESTION # 53

Which of the following statements are true about the differences between using convolutional neural networks (CNNs) in text tasks and image tasks?

- A. Color image input is multi-channel, whereas text input is single-channel.
- B. When the CNN is used for text tasks, the kernel size must be the same as the number of word vector dimensions. This constraint, however, does not apply to image tasks.
- C. CNNs are suitable for image tasks, but they perform poorly in text tasks.
- D. For CNN, there is no difference in handling text or image tasks.

**Answer: A,B**

Explanation:

In CNN usage:

\* A: True - color images have multiple channels (e.g., RGB = 3), while text inputs are represented as sequences of word embeddings, typically single-channel in structure.

\* B: True - in text tasks, the convolution kernel height must match the embedding dimension to capture complete token information, which is not a constraint in images.

\* C: False - there are clear differences in handling between text and image data.

\* D: False - CNNs can perform very well in text classification when used appropriately.

Exact Extract from HCIP-AI EI Developer V2.5:

"In text CNNs, convolution kernels span the entire embedding dimension, whereas in image CNNs, kernel size is independent of channel count." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: CNN in NLP

### NEW QUESTION # 54

What are the adjacency relationships between two pixels whose coordinates are (21,13) and (22,12)?

- A. 8-adjacency
- B. Diagonal adjacency
- C. 4-adjacency
- D. No adjacency relationship

**Answer: A,B**

Explanation:

Pixel adjacency describes how pixels are connected:

\* 4-adjacency: Pixels share a side (up, down, left, right).

\* Diagonal adjacency: Pixels touch at a corner.

\* 8-adjacency: Combination of 4-adjacency and diagonal adjacency.

Given coordinates (21,13) and (22,12), the pixels differ by 1 in both x and y directions, meaning they meet at a corner - this is diagonal adjacency. Since 8-adjacency includes both side and diagonal adjacency, they are also 8-adjacent.

Exact Extract from HCIP-AI EI Developer V2.5:

"In 8-adjacency, pixels are considered neighbors if they are connected horizontally, vertically, or diagonally.

Diagonal adjacency occurs when pixels touch at a corner."

Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Digital Image Basics

### NEW QUESTION # 55

Seq2Seq is a model that translates one sequence into another sequence, essentially consisting of two recurrent neural networks (RNNs), one is the Encoder, and the other is the ----- . (Fill in the blank.)

**Answer:**

Explanation:

Decoder

Explanation:

The Seq2Seq architecture is widely used in machine translation, speech recognition, and other NLP tasks. It consists of:

- \* Encoder: Processes the input sequence and encodes it into a fixed-length context vector containing semantic information.
- \* Decoder: Uses this context vector to generate the target output sequence step by step.

Exact Extract from HCIP-AI EI Developer V2.5:

"Seq2Seq models consist of an encoder and a decoder. The encoder transforms the input into a context vector, which the decoder uses to generate the output sequence." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Encoder-Decoder Architecture

**NEW QUESTION # 56**

The technologies underlying ModelArts support a wide range of heterogeneous compute resources, allowing you to flexibly use the resources that fit your needs.

- **A. TRUE**
- B. FALSE

**Answer: A**

Explanation:

ModelArts is built to support a variety of compute resources, including CPUs, GPUs, and Ascend AI processors. This heterogeneous resource pool allows users to select the hardware that best matches their training or inference requirements, ensuring cost efficiency and optimal performance for different workloads.

Exact Extract from HCIP-AI EI Developer V2.5:

"ModelArts supports heterogeneous compute environments, enabling selection among CPUs, GPUs, and Ascend processors for flexible AI development." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: ModelArts Infrastructure

**NEW QUESTION # 57**

.....

We have to admit that the exam of gaining the H13-321\_V2.5 certification is not easy for a lot of people, especial these people who have no enough time. If you also look forward to change your present boring life, maybe trying your best to have the H13-321\_V2.5 Certification is a good choice for you. Now it is time for you to take an exam for getting the certification.
