Quiz IAPP - CIPT - Useful Hottest Certified Information Privacy Technologist (CIPT) Certification

ExamsReviews provides with actual IAPP CIPT exam dumps in PDF format. You can easily download and use Certified Information Privacy Technologist (CIPT) (CIPT) PDF dumps on laptops, tablets, and smartphones. Our real Certified Information Privacy Technologist (CIPT) (CIPT) dumps PDF is useful for applicants who don't have enough time to prepare for the examination. If you are a busy individual, you can use IAPP CIPT PDF dumps on the go and save time.

IAPP CIPT (Certified Information Privacy Technologist) Certification Exam is designed for professionals who are interested in establishing their proficiency in the field of data privacy technology. This credential is recognized globally and is considered a valuable asset for individuals who want to demonstrate their expertise in privacy technology. CIPT Exam is an industry-standard certification that is widely acknowledged and respected by employers as well as clients.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q48-Q53):

NEW QUESTION # 48

An organization is launching a new online subscription-based publication. As the service is not aimed at children, users are asked for their date of birth as part of the sign-up process. The privacy technologist suggests it may be more appropriate to ask if an individual is over 18 rather than requiring they provide a date of birth. What kind of threat is the privacy technologist concerned about?

- A. Insecurity.
- B. Identification.
- C. Minimization.
- D. Interference.

Answer: C

Explanation:

Data minimization is a principle of data protection that dictates only collecting personal data that is necessary for the specified purpose. By asking if an individual is over 18, rather than collecting their full date of birth, the organization adheres to the principle of data minimization, reducing the amount of personal information collected and thereby lowering the risk of identification and misuse of personal data. This approach aligns with the principles set forth in data protection regulations such as the General Data Protection Regulation (GDPR).

NEW QUESTION # 49

A privacy engineer has been asked to review an online account login page. He finds there is no limitation on the number of invalid login attempts a user can make when logging into their online account.

What would be the best recommendation to minimize the potential privacy risk from this weakness?

- A. Enforce strong password and account credentials.
- B. Implement a CAPTCHA system.
- C. Develop server-side input validation checks.
- D. Implement strong Transport Layer Security (TLS) to ensure an encrypted link.

Answer: B

Explanation:

* Option A (Enforce strong password and account credentials): CAPTCHA (Completely Automated Public Turing test to tell Computers and Humans Apart) helps to prevent automated bots from attempting unlimited login attempts, reducing the risk of brute force attacks. It effectively adds a layer of security by ensuring that login attempts are made by humans, not automated scripts.

* Option B (Server-side input validation checks): While important for overall security, input validation checks do not specifically address the issue of limiting invalid login attempts.

* Option C (Enforce strong password and account credentials): Strong passwords and credentials are important but do not directly limit the number of invalid login attempts.

* Option D (Implement strong TLS): Transport Layer Security (TLS) ensures encrypted communication but does not limit the number of login attempts.

References:

OWASP (Open Web Application Security Project) guidelines on preventing brute force attacks.

NIST SP 800-63B Digital Identity Guidelines on authentication and brute force protection.

Conclusion: Implementing a CAPTCHA system (Option A) is the best recommendation to minimize the potential privacy risk from unlimited invalid login attempts, as it helps to distinguish between human and automated login attempts, reducing the risk of brute force attacks.

NEW QUESTION # 50

SCENARIO

Please use the following to answer the next question:

Jordan just joined a fitness-tracker start-up based in California, USA, as its first Information Privacy and Security Officer. The company is quickly growing its business but does not sell any of the fitness trackers itself. Instead, it relies on a distribution network of third-party retailers in all major countries. Despite not having any stores, the company has a 78% market share in the EU. It has a

website presenting the company and products, and a member section where customers can access their information. Only the email address and physical address need to be provided as part of the registration process in order to customize the site to the user's region and country. There is also a newsletter sent every month to all members featuring fitness tips, nutrition advice, product spotlights from partner companies based on user behavior and preferences.

Jordan says the General Data Protection Regulation (GDPR) does not apply to the company. He says the company is not established in the EU, nor does it have a processor in the region. Furthermore, it does not do any "offering goods or services" in the EU since it does not do any marketing there, nor sell to consumers directly. Jordan argues that it is the customers who chose to buy the products on their own initiative and there is no "offering" from the company.

The fitness trackers incorporate advanced features such as sleep tracking, GPS tracking, heart rate monitoring, wireless syncing, calorie-counting and step-tracking. The watch must be paired with either a smartphone or a computer in order to collect data on sleep levels, heart rates, etc. All information from the device must be sent to the company's servers in order to be processed, and then the results are sent to the smartphone or computer. Jordan argues that there is no personal information involved since the company does not collect banking or social security information.

Based on the current features of the fitness watch, what would you recommend be implemented into each device in order to most effectively ensure privacy?

- A. A2DP Bluetooth profile.
- B. Hashing.
- C. Persistent unique identifier.
- D. Randomized MAC address.

Answer: C

NEW QUESTION # 51

Which of these is considered an ethical dark pattern on privacy?

- A. Giving users more privacy options in relation to their personal information
- B. Providing clear and simple privacy notices to users
- C. Using attractive designs to influence an individual.
- D. Rewarding users for providing more personal information

Answer: D

Explanation:

rewarding users for providing more personal information is considered an unethical dark pattern on privacy. Dark patterns are user interface design choices that are intended to manipulate users into taking actions they might not otherwise take.

NEW QUESTION # 52

When writing security policies, the most important consideration is to?

- A. Require all employees to read and acknowledge their understanding.
- B. Ensure they cover enough details for common situations.
- C. Ensure they are based on the organization's risk profile.
- D. Follow industry best practices.

Answer: C

Explanation:

the most important consideration when writing security policies is to ensure they are based on the organization's risk profile. This means that the policies should be tailored to address the specific risks faced by the organization.
