ExamcollectionPass XK0-005 Web-Based Practice Test: For the CompTIA Linux+ Certification Exam (XK0-005) web-based

practice exam no special software installation is required. Because it is a browser-based CompTIA XK0-005 practice test. The web-based CompTIA Linux+ Certification Exam (XK0-005) practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows. In the same way, IE, Firefox, Opera and Safari, and all the major browsers support the web-based XK0-005 practice test.

CompTIA Linux+ certification is ideal for IT professionals who work in organizations that rely heavily on Linux operating systems. CompTIA Linux+ Certification Exam certification is particularly suitable for system administrators, network administrators, and IT professionals who are responsible for maintaining Linux servers, workstations, and devices. CompTIA Linux+ Certification Exam certification helps candidates to demonstrate their skills and knowledge in Linux systems and gives them a competitive advantage in the job market.

CompTIA Linux+ Certification Exam Sample Questions (Q383-Q388):

NEW QUESTION # 383

A Linux administrator needs to create an image named sda.img from the sda disk and store it in the /tmp directory. Which of the following commands should be used to accomplish this task?

- A. dd --of=/dev/sda --if=/tmp/sda.img
- B. dd of=/dev/sda if=/tmp/sda.img
- C. dd --if=/dev/sda --of=/tmp/sda.img
- D. dd if=/dev/sda of=/tmp/sda.img

Answer: D

Explanation:

The command dd if=/dev/sda of=/tmp/sda.img should be used to create an image named sda.img from the sda disk and store it in the /tmp directory. The dd command is a tool for copying and converting data on Linux systems. The if option specifies the input file or device, in this case /dev/sda, which is the disk device.

The of option specifies the output file or device, in this case /tmp/sda.img, which is the image file. The command dd if=/dev/sda of=/tmp/sda.img will copy the entire disk data from /dev/sda to /tmp/sda.img and create an image file. This is the correct command to use to accomplish the task. The other options are incorrect because they either use the wrong options (--if or --of instead of if or of) or swap the input and output (dd of=/dev/sda if=/tmp/sda.img or dd --of=/dev/sda --if=/tmp/sda.img). References: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 10: Managing Storage, page 323.

NEW QUESTION # 384

Which of the following should be used to verify the integrity of a file?

- A. gpg -d
- B. fsck
- C. sha256sum
- D. hashcat

Answer: C

Explanation:

The best tool to use to verify the integrity of a file is A) sha256sum. This tool will compute and display the SHA-256 hash of a file, which is a 64-digit hexadecimal number that uniquely identifies the file's content. By comparing the hash of a downloaded file with the hash provided by the file owner or source, you can confirm that the file has not been altered or corrupted during the transfer.

NEW QUESTION # 385

An administrator is reviewing the boot logs on a system that is having intermittent issues when trying to access certain directories and files. The following errors appear in dmesg:

mathematica

CopyEdit

I/O error, dev sda1, sector 456788

Buffer I/O error on device sda1, logical block 378994

Which of the following actions should the administrator take to resolve the issue?

- A. Use fsck /dev/sda1 in GRUB recovery

- B. Boot a recovery disk, run fsck on unmounted drive
- C. Use dd to copy and reformat the disk
- D. Use gddrescue to copy the disk, edit /etc/fstab, replace the disk

Answer: B

NEW QUESTION # 386

An administrator thinks that a package was installed using a snap. Which of the following commands can the administrator use to verify this information?

- A. snap install
- B. snap list
- C. snap find
- D. snap try

Answer: B

Explanation:

Again, the correct command to list all installed snap packages is snap list. This command provides information about installed snap applications and their versions, helping the administrator verify the package installation.

NEW QUESTION # 387

A Linux systems administrator is setting up a new web server and getting 404 - NOT FOUND errors while trying to access the web server pages from the browser.

While working on the diagnosis of this issue, the Linux systems administrator executes the following commands:

```
# getenforce
Enforcing

# matchpathcon -V /var/www/html/*
/var/www/html/index.html has context unconfined_u:object_r:user_home_t:s0, should be system_u:object_r:httpd_sys_content_t:s0
/var/www/html/page1.html has context unconfined_u:object_r:user_home_t:s0, should be system_u:object_r:httpd_sys_content_t:s0
```

Which of the following commands will BEST resolve this issue?

- A. sed -i 's/SELINUX=enforcing/SELINUX=disabled/' /etc/selinux/config
- B. setsebool -P httpd_can_network_connect_db on
- C. restorecon -R -v /var/www/html
- D. setenforce 0

Answer: C

Explanation:

The command restorecon -R -v /var/www/html will best resolve the issue. The issue is caused by the incorrect SELinux context of the web server files under the /var/www/html directory. The output of ls -Z /var/www/html shows that the files have the type user_home_t, which is not allowed for web content. The command restorecon restores the default SELinux context of files based on the policy rules. The options -R and -v are used to apply the command recursively and verbosely. This command will change the type of the files to httpd_sys_content_t, which is the correct type for web content. This will allow the web server to access the files and serve the pages to the browser.
