Fortinet FCSS - Security Operations 7.4 Analyst Sample Questions (Q40-Q45):

NEW QUESTION # 40
What is the benefit of managing multiple FortiAnalyzer units in a Fabric deployment?

- A. It simplifies the licensing process
- B. It enhances the aesthetics of the deployment
- C. It reduces the physical space required for hardware
- D. It provides centralized management of configurations

Answer: D

NEW QUESTION # 41
Refer to Exhibit:

You are tasked with reviewing a new FortiAnalyzer deployment in a network with multiple registered logging devices. There is only one FortiAnalyzer in the topology.
Which potential problem do you observe?

- A. The analytics-to-archive ratio is misconfigured.
- B. The analytics retention period is too long.
- C. The disk space allocated is insufficient.
- D. The archive retention period is too long.

Answer: A

Explanation:
Understanding FortiAnalyzer Data Policy and Disk Utilization:
FortiAnalyzer uses data policies to manage log storage, retention, and disk utilization.

The Data Policy section indicates how long logs are kept for analytics and archive purposes.

The Disk Utilization section specifies the allocated disk space and the proportions used for analytics and archive, as well as when alerts should be triggered based on disk usage. Analyzing the Provided Exhibit:

Keep Logs for Analytics: 60 Days

Keep Logs for Archive: 120 Days

Disk Allocation: 300 GB (with a maximum of 441 GB available)

Analytics: Archive Ratio: 30% : 70%

Alert and Delete When Usage Reaches: 90%

Potential Problems Identification:

Disk Space Allocation: The allocated disk space is 300 GB out of a possible 441 GB, which might not be insufficient if the log volume is high, but it is not the primary concern based on the given data. Analytics-to-Archive Ratio: The ratio of 30% for analytics and 70% for archive is unconventional. Typically, a higher percentage is allocated for analytics since real-time or recent data analysis is often prioritized. A common configuration might be a 70% analytics and 30% archive ratio. The misconfigured ratio can lead to insufficient space for analytics, causing issues with real-time monitoring and analysis.

Retention Periods: While the retention periods could be seen as lengthy, they are not necessarily indicative of a problem without knowing the specific log volume and compliance requirements. The length of these periods can vary based on organizational needs and legal requirements. Conclusion:

Based on the analysis, the primary issue observed is the analytics-to-archive ratio being misconfigured. This misconfiguration can significantly impact the effectiveness of the FortiAnalyzer in real-time log analysis, potentially leading to delayed threat detection and response.
