

RCNI New Practice Materials & RCNI Latest Learning Material

The ActualTestsIT recognizes that students invest significant time and resources in their RUCKUS Certified Networking Implementer (RCNI) certification preparation. Therefore, the ActualTestsIT is committed to save their money with up to 365 days of free questions updates. The ActualTestsIT regularly updates its practice material to ensure that users have the most up-to-date questions. The ActualTestsIT also offers a money-back guarantee (terms and conditions apply) for those who fail to get success, which demonstrates its commitment to users' success.

We are benefiting more and more candidates for our excellent RCNI exam materials which is compiled by the professional experts accurately and skillfully. We are called the best friend on the way with our customers to help pass their RCNI exam and help achieve their dreaming certification. The reason is that we not only provide our customers with valid and reliable RCNI study questions, but also offer best service online since we uphold the professional ethical.

The Best Accurate RCNI New Practice Materials Help You to Get Acquainted with Real RCNI Exam Simulation

RCNI exam is a new turning point in the IT industry. Get this examination certification, you will become the IT industry's professional high-end person. With the spread and progress of information technology, you will see hundreds of online resources which provide RUCKUS RCNI Questions and answers. While ActualTestsIT ahead. The reason people choose ActualTestsIT RUCKUS RCNI exam training materials is that it can really bring benefits to them, and to help you come true your dreams as soon as possible!

RUCKUS Certified Networking Implementer Sample Questions (Q31-Q36):

NEW QUESTION # 31

The root bridge is connected to another switch over two independent 10Gbe links. Which link will remain in a forwarding state on both sides?

- A. the link with the lowest port number on the non-root switch
- B. the link with the lowest port number on the root switch
- C. the link with the highest port number on the non-root switch
- D. the link with the highest port number on the root switch

Answer: B

NEW QUESTION # 32

Which command will create VE 2 on an ICX running FastIron 08.0.95?

- A. ICX(config-vlan-2)# enable

- B. ICX(config-vlan-2)# vlan 2 name VE2
- C. ICX(config-vlan-2)# interface ve 2
- D. ICX(config-vlan-2)# router-interface ve 2

Answer: A

NEW QUESTION # 33

Review the following configuration.

A RADIUS server is connected and working. However, a switch technician has forgotten the RADIUS username/password for the ICX. When RADIUS is not functioning, they expect to be able to plug into the console port and use the local username/password as a backup.

The ICX does not accept the local password.

Why can't the technician log in?

- A. Based on the AAA login command, local password will only be used if the RADIUS server is unavailable.
- B. The AAA web-server configuration is missing the radius keyword.
- C. Based on the AAA login command, local should be in front of radius for correct backup operation.
- D. Local username/password is only used for SSH and web access.

Answer: A

Explanation:

* Understanding the Configuration:

* The command `aaa authentication login default radius local` specifies that the switch will attempt RADIUS authentication first. If the RADIUS server is unavailable, it will fallback to the local username/password.

* If the RADIUS server is operational, the local credentials will not be accepted, even over the console port.

* Why Can't the Technician Log In?

* The local username/password will only work if the RADIUS server is unreachable. In this scenario, the RADIUS server is functional, so the switch continues to authenticate through it and does not fall back to the local credentials.

* This behavior is by design, as dictated by the configuration.

* Solution:

* If access to the console port using local credentials is a critical requirement, consider adjusting the configuration to prioritize local credentials. For example, use:

```
aaa authentication login default local radius
```

This configuration ensures that local credentials are tried first, with RADIUS as a secondary option.

NEW QUESTION # 34

Which ICX model can run silently in fanless mode?

- A. ICX7150-48ZP
- B. ICX7550-24P
- C. ICX7150-48PF
- D. ICX7150-48P

Answer: C

Explanation:

The RUCKUS ICX7150 series includes models designed for silent operation, suitable for deployments in noise-sensitive environments such as offices or classrooms.

NEW QUESTION # 35

What is the maximum Wattage for a PoE+ interface with PoE overdrive enabled?

- A. 0
- B. 1

- C. 2
- D. 3

Answer: B

Explanation:

Power over Ethernet (PoE) technology allows network switches to deliver electrical power to connected devices over standard Ethernet cables. The IEEE 802.3at standard, commonly known as PoE+, provides up to

30 watts of power per port. RUCKUS enhances this capability with a proprietary feature called PoE+ Overdrive, which increases the maximum power output per port.

With PoE+ Overdrive enabled, a PoE+ interface on RUCKUS ICX switches can deliver up to 45 watts of power over two pairs of wires. This enhancement is particularly beneficial for devices that require more power than the standard PoE+ provision, such as advanced wireless access points or video conferencing systems.

It's important to note that the actual power delivered to the powered device (PD) is slightly less due to cable losses. For instance, while the Power Sourcing Equipment (PSE) may supply 45 watts, the PD might receive approximately 35.5 watts. This ensures that devices receive sufficient power even after accounting for transmission losses.

The availability of PoE+ Overdrive and the maximum power output per port can vary depending on the specific ICX switch model. For example, the RUCKUS ICX 7650 supports PoE+ Overdrive with a maximum output of 45 watts per port. Similarly, the ICX 7150-48ZP model offers PoE+ Overdrive capabilities.

For detailed information on PoE+ Overdrive capabilities and supported models, refer to the "Ruckus Power over Ethernet (PoE) Interoperability" document.
