頂尖的ISACA CDPSE題庫資訊&權威的KaoGuTi - 認證考試材料的領導者

KaoGuTi提供下載的ISACA的CDPSE證照考試的問題範例，使你購買無風險的過程，這是一個使用版的練習題，讓你看到考題的問題和答案的品質，以及在你決定購買之前的價值，相信ISACA的CDPSE證照考試的樣品足以定性，成為眾多考生滿意的產品。該考題還包括PDF格式和模擬考試測試版本兩種，你可以根據自己的情況去選擇適合自己的。

最新的 Isaca Certification CDPSE 免費考試真題 (Q209-Q214):

問題 #209

Which of the following vulnerabilities is MOST effectively mitigated by enforcing multi-factor authentication to obtain access to personal information?

- A. End users forgetting their passwords
- B. Organizations using weak encryption to transmit data
- C. Vulnerabilities existing in authentication pages
- **D. End users using weak passwords**

答案: D

問題 #210

Which of the following should be the FIRST consideration when selecting a data sanitization method?

- A. Risk tolerance
- B. Implementation cost
- C. Industry standards
- **D. Storage type**

答案： D

解題說明：

The first consideration when selecting a data sanitization method is the type of storage device that holds the data to be sanitized. Different types of storage devices have different characteristics and limitations that affect the effectiveness and feasibility of data sanitization methods. For example, magnetic media, such as hard disk drives (HDDs), can be sanitized by data degaussing, which is wiping data permanently by weakening the magnetic field¹. However, data degaussing is not applicable to devices that use solid state drive (SSD) technology, since SSDs do not store data magnetically². Therefore, the storage type determines which data sanitization methods are suitable and available for the data disposal process.

問題 #211

Which of the following should an organization do FIRST to ensure it can respond to all data subject access requests in a timely manner?

- A. Invest in a platform to automate data review
- B. Create a policy for handling access request
- C. Confirm what is required for disclosure.
- **D. Understand the data in its possession.**

答案： D

解題說明：

Explanation

Before an organization can respond to data subject access requests (DSARs), it needs to have a clear understanding of the data in its possession, such as what types of personal data are collected, where they are stored, how they are processed, who has access to them, and how long they are retained. This will help the organization to locate and retrieve the relevant data for each DSAR, and to ensure that the data are accurate, complete and up to date. Understanding the data in its possession will also help the organization to comply with other data protection principles and obligations, such as data minimization, purpose limitation, security and accountability.

The other options are less important or irrelevant to do first. Investing in a platform to automate data review may help to speed up the response process, but it does not guarantee that the organization has identified all the data sources and categories that are subject to DSARs. Confirming what is required for disclosure is also important, but it depends on the specific request and the applicable law or regulation. Creating a policy for handling access requests is a good practice, but it should be based on a thorough understanding of the data in its possession.

Guidelines 01/2022 on data subject rights - Right of access Version 1, section 2.1: "The controller should have a clear overview of all processing activities involving personal data."

問題 #212

When using anonymization techniques to prevent unauthorized access to personal data, which of the following is the MOST important consideration to ensure the data is adequately protected?

- A. The data must be protected by multi-factor authentication.
- B. The key must be a combination of alpha and numeric characters.
- **C. The key must be kept separate and distinct from the data it protects.**
- D. The data must be stored in locations protected by data loss prevention (DLP) technology.

答案： C

解題說明：

Explanation

Anonymization is a technique that removes or modifies personal data in such a way that it can no longer be attributed to a specific data subject. Anonymization can be achieved by various methods, such as encryption, pseudonymization, aggregation, generalization, etc. When using anonymization techniques to prevent unauthorized access to personal data, the most important consideration to ensure the data is adequately protected is that the key must be kept separate and distinct from the data it protects. The key is a piece of information that is used to reverse the anonymization process and restore the original personal data. The key must be stored and managed in a secure location that is different from where the anonymized data is stored and processed. This way, even if the anonymized data is compromised, the key cannot be accessed or used to re-identify the data subjects. References: : CDPSE Review Manual (Digital Version), page 29

問題 #213

Of the following, who should be PRIMARILY accountable for creating an organization's privacy management strategy?

- A. Information security steering committee
- B. Privacy steering committee
- C. Chief data officer (CDO)
- **D. Chief privacy officer (CPO)**

答案： D

解題說明：

Explanation

Some organizations, typically those that manage large amounts of personal information related to employees, customers, or constituents, will employ a chief privacy officer (CPO). Some organizations have a CPO because applicable regulations such as the Gramm-Leach-Bliley Act (GLBA) require it. Other regulations such as the Health Information Portability and Accountability Act (HIPAA), the Fair Credit Reporting Act (FCRA), and the GLBA place a slate of responsibilities upon an organization that compels them to hire an executive responsible for overseeing compliance.

The chief privacy officer (CPO) is the senior executive who is responsible for establishing and maintaining the organization's privacy vision, strategy, and program. The CPO oversees the development and implementation of privacy policies, procedures, standards, and controls, and ensures that they align with the organization's business objectives and legal obligations. The CPO also leads the privacy governance structure, such as the privacy steering committee, and coordinates with other stakeholders, such as the chief data officer (CDO), the information security steering committee, and the legal counsel, to ensure that privacy is integrated into all aspects of the organization's operations.
