You can pass your Cohesity COH-285 certification exam in less time, without wasting time and money on outdated or unreliable Cohesity Certified Protection Professional - NetBackup Appliances (COH-285) exam study materials. Don't let fear or a lack of resources hold you back from achieving your goals, trust TestkingPass Cohesity Certified Protection Professional - NetBackup Appliances (COH-285) practice test material and achieve the highest marks in your Cohesity Certified Protection Professional - NetBackup Appliances (COH-285) exam.

Cohesity COH-285 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Configure NetBackup: This section of the exam measures the skills of system administrators and focuses on the configuration tasks required to set up and manage a NetBackup environment. It covers the setup of primary, media, and client settings along with essential host properties, including the use of security certificates. The section explains how to configure disk storage, cloud storage, and storage unit groups to support stable backup operations. It also includes the configuration of standard and advanced backup policies and protection plans. Candidates are expected to understand specialized backup solutions such as synthetic backups, True Image Restore, multiple data streams, checkpoint restart, and different duplication methods that involve storage lifecycle policies, disk staging, and replication features.
Topic 2	<ul style="list-style-type: none">• Tune NetBackup: This section of the exam measures skills of system engineers and focuses on analyzing performance related factors in a NetBackup environment. It introduces performance assessment and optimization practices to help candidates identify bottlenecks and improve overall efficiency. Tuning NetBackup includes making adjustments that lead to more stable and faster backup and recovery operations.
Topic 3	<ul style="list-style-type: none">• Troubleshoot NetBackup: This section of the exam measures skills of NetBackup administrators and focuses on resolving issues that occur during backup and recovery operations. It covers the interpretation of status codes and job details to diagnose failed jobs. The section also explains how to troubleshoot devices and media and how to validate connectivity between primary servers, media servers, and client systems. Candidates learn to address common problems in disaster recovery situations, including tasks related to recovering the NetBackup catalog.
Topic 4	<ul style="list-style-type: none">• Monitor and Maintain NetBackup: This section of the exam measures skills of operations personnel and focuses on the monitoring and maintenance tasks necessary to keep a NetBackup environment healthy. The topics include the core concepts of image management and the use of the NetBackup Administration Console to verify images, expire them, import backup data, and perform manual duplication. The section explains how to manage both disk and cloud storage within NetBackup and highlights the use of reports for verification and monitoring. It also covers administrative controls for running, cancelling, suspending, resuming, and prioritizing backup or duplication jobs. Candidates learn how to initiate and monitor restore operations and understand the security management features such as role based access control and host ID certificates.

COH-285 Examcollection Dumps & Practice COH-285 Test

There are more and more same products in the market of study materials. We know that it will be very difficult for you to choose the suitable COH-285 learning guide. If you buy the wrong study materials, it will pay to its adverse impacts on you. It will be more difficult for you to pass the COH-285 Exam. So if you want to pass your exam and get the certification in a short time, choosing our COH-285 exam questions are very important for you. You will find that our COH-285 practice guide is the most suitable for you.

Cohesity Certified Protection Professional - NetBackup Appliances Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which of the following is NOT a type of update that can be installed on a NetBackup appliance?

- A. EEB
- B. Security patch
- C. VxUpdate
- D. Firmware update

Answer: B

NEW QUESTION # 37

Which supported step should an administrator perform to ensure all operating system logs are sent from an appliance to a central logging server running Linux?

- A. configure syslog forwarding in OpsCenter
- B. configure a cron job on the appliance to copy the logs
- C. configure syslog forwarding in the appliance CLISH
- D. configure access to the appliance logs with the share open command

Answer: D

NEW QUESTION # 38

A tape library had the robot firmware upgraded, and now the robot is reading the barcodes with additional characters. How should an administrator enable NetBackup to use the same characters that were used before the firmware upgrade?

- A. update Media settings
- B. update the Media ID Generation setting
- C. update the Barcode Rules setting
- D. update the device mapping files

Answer: B

NEW QUESTION # 39

Where can an administrator change a disk pool to Down status in the NetBackup Administration Console?

- A. NetBackup Management > Storage > Storage Unit
- B. Media and Device Management > Credentials > Storage Servers
- C. Media and Device Management > Devices > Disk Pools
- D. Media and Device Management > Device Monitor > Disk Pools

Answer: D

Explanation:

The correct location is Media and Device Management > Device Monitor > Disk Pools. In NetBackup, the Devices > Disk Pools view is primarily used to view configured disk pools, manage disk-pool properties, delete disk pools, or perform inventory-related actions. It is not the operational monitoring location used to change the runtime state of a disk pool. Cohesity documentation distinguishes the disk-pool management view from state monitoring; for example, it states that disk pool state is UP or DOWN and that the state is displayed in the Status column when locating the disk pool. The classic NetBackup Administration Console procedure states that to change disk pool state, the administrator selects Media and Device Management > Device Monitor, opens the Disk Pools tab, selects the disk pool, and then chooses Actions > Up or Actions > Down. Cohesity's disk-pool state guidance also notes that changing a disk pool to DOWN requires the disk pool not to be busy; assigned backup jobs must complete or be canceled before the state change succeeds.

Therefore, the correct console path is option B.

NEW QUESTION # 40

What is the minimum supported version of NetBackup for upgrading to NetBackup 10.0?

- A. 8.1.2
- B. 8.0
- C. 7.7.3
- **D. 8.2**

Answer: D

NEW QUESTION # 41

.....

There are many methods to pass COH-285 exam, but the method provided by our TestkingPass can be the most efficient. You can quickly feel your ability has enhanced when you are using COH-285 simulation software made by our IT elite. COH-285 Exam will be updates every once in a while; to ensure you use the latest materials, we provide one-year free update of our software for you a that you can be rest assured to use it.
