InsuranceSuite-Analyst Best Study Material - InsuranceSuite-Analyst Valid Test Pdf

Managing time during the Guidewire InsuranceSuite-Analyst exam is a challenging task. Most candidates cannot manage their time during the Guidewire InsuranceSuite-Analyst exam, leave the questions, and fail. Time management skills can help students gain excellent marks in the InsuranceSuite-Analyst Exam. Guidewire InsuranceSuite-Analyst practice exam on the software help you identify which kind of InsuranceSuite-Analyst questions are more time-consuming, and they would be able to assess their efficiency in answering questions.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

A well written user story follows the INVEST model. INVEST is an acronym that stands for:

- A. Investigate, Negotiable, Viable, Elaborate, Small, Technology
- **B. Independent, Negotiable, Valuable, Estimable, Small, Testable**
- C. Investigate, Negotiable, Valuable, Estimable, Software, Testable
- D. Independent, Negotiable, Viable, Elaborate, Software, Technology

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

The INVEST model, originally created by Bill Wake, is the industry-standard checklist used by Guidewire Business Analysts to assess the quality of a User Story.

* Independent: The story should be self-contained, allowing it to be developed and tested separately from other stories to avoid dependencies that block progress.

* Negotiable: The story is not a closed contract; it is an invitation to a conversation (Story Huddle) where details can be adjusted between the BA, Developer, and QA.

* Valuable: It must deliver value to the business or the user (not just a technical task).

* Estimable: The team must have enough information to size the effort. If it cannot be estimated, it usually needs further clarification or breakdown.

* Small: It should be small enough to be completed within a single sprint (typically 2-3 days of work).

* Testable: It must have clear acceptance criteria (often in Given-When-Then format) that allow the QA team to verify when the story is "Done." Why other options are incorrect:

* B, C, D: These contain incorrect terms such as "Viable," "Elaborate," "Software," "Technology," or "Investigate," which are not part of the standard INVEST acronym.

NEW QUESTION # 40

_____ is a high-level sprint plan that is delivered at the end of Inception. It is used to provide guidance on which stories are prioritized based on value or risk.

- A. Pre-Inception Sprint Plan
- **B. Conceptual Sprint Plan**
- C. Risk-based Sprint Plan
- D. Prioritized Sprint Plan
- E. Development Sprint Plan

Answer: B

Explanation:

The Conceptual Sprint Plan is a key deliverable produced at the end of the Inception phase in Guidewire SurePath methodology.

It provides high-level guidance on how user stories are expected to be sequenced across future sprints, typically based on business value, dependencies, and risk. It does not assign tasks or commit teams to detailed schedules but serves as a strategic roadmap for delivery.

This plan bridges business priorities and Agile execution and is essential for transitioning from Inception into Sprint Zero and active development.

NEW QUESTION # 41

All of the following are characteristics of a good requirement except:

- A. Verifiable
- **B. Feature**
- C. Traceable
- D. Clear

Answer: B

Explanation:

A well-written requirement in a Guidewire InsuranceSuite project should meet several quality criteria to ensure it can be successfully implemented and validated. The correct answer is Option A - Feature, as a feature is not a characteristic of a good requirement. Good requirements are clear, meaning they are easy to understand and unambiguous. Clarity ensures that business analysts, developers, and testers interpret the requirement consistently. Requirements should also be verifiable, which means there must be a way to confirm through testing or inspection that the requirement has been met.

Another critical characteristic is traceability. Traceable requirements can be linked back to business objectives and forward to design elements, test cases, and implementation artifacts. Traceability is essential in regulated insurance environments and helps manage scope, changes, and audits.

A feature, however, is not a quality attribute of a requirement. Features are collections of functionality or capabilities that may be delivered through one or more requirements. While requirements can describe aspects of a feature, being a "feature" does not describe how well a requirement is written.

Understanding these characteristics helps analysts produce higher-quality documentation that reduces rework, improves delivery predictability, and supports successful Guidewire implementations.

NEW QUESTION # 42

Data Model Entities: Match the entity type with the appropriate description.

□

Answer:

Explanation:

Type key#A single reference to a value in a typelist

Foreign key#A single reference to the ID of another entity

Field#Atomic data stored about the entity (non-restricted values)

Array key#A set of references to another entity

In the Guidewire Data Model, entities consist of different types of columns/properties that define their structure and relationships:

* Type key (B): This field creates a relationship between the entity and a Typelist (a pre-defined list of valid values, like a dropdown menu). For example, a Status field that can only be "Open", "Closed", or

"Pending" is a Type key pointing to the StatusType typelist. It references a single specific value from that list.

* Foreign key (D): This creates a link to a specific instance of another entity. It stores the unique ID of that related object. This represents a "Many-to-One" or "One-to-One" relationship. For example, a Claim entity has a Foreign Key to a Policy entity (because one claim belongs to one specific policy).

* Field (A): Often called a "Column" or "Atomic Field," this stores raw data such as Strings, Integers, Booleans, or Dates. It holds atomic data (e.g., "First Name", "Loss Date", "Coverage Amount") that is not restricted to a specific list of values like a Type key is.

* Array key (C): This represents a "One-to-Many" relationship. It allows the parent entity to link to a collection (set) of child entities. For example, a Policy entity has an Array of Vehicle entities (because one policy can cover multiple vehicles).

NEW QUESTION # 43

An example of a tool built by Guidewire Professional Services to support implementation projects is:

- A. Business objective
- B. Guiding principle
- **C. User story card**
- D. Requirement

Answer: C

Explanation:

The User Story Card is a key tool developed and standardized by Guidewire Professional Services to support InsuranceSuite implementation projects, making Option A the correct answer.

User story cards provide a structured, consistent way to capture requirements using an Agile approach aligned with SurePath

methodology. They define business intent, acceptance criteria, and scope boundaries in a format that supports elaboration, estimation, development, and testing.

The remaining options are not tools. Requirements (Option B), business objectives (Option C), and guiding principles (Option D) are types of content, not standardized delivery tools.

User story cards enable consistent communication across analysts, developers, and testers and are central to successful Guidewire implementations.

NEW QUESTION # 44

.....

"It's never too old to learn", preparing for a InsuranceSuite-Analyst certification is becoming a common occurrence. Especially in the workplace of today, a variety of training materials and tools always makes you confused and waste time to test its quality. In fact, you can totally believe in our InsuranceSuite-Analyst Test Questions for us 100% guarantee you pass InsuranceSuite-Analyst exam. If you unfortunately fail in the exam after using our InsuranceSuite-Analyst test questions, you will also get a full refund from our company by virtue of the proof certificate.
