Questions HPE0-S59 Pdf, Latest HPE0-S59 Cram Materials

The Certified Production and HPE0-S59 certification is a valuable credential earned by individuals to validate their skills and competence to perform certain job tasks. Your HPE Compute Solutions HPE0-S59 Certification is usually displayed as proof that you've been trained, educated, and prepared to meet the specific requirement for your professional role.

To prepare for the exam, candidates can enroll in the HPE ATP – Server Solutions V4 training course. This course covers all the topics included in the exam and provides hands-on experience with HPE compute solutions. HPE0-S59 course is available online and can be taken at the candidate's own pace.

HP HPE0-S59 (HPE Compute Solutions) Exam is a certification exam designed to validate the skills and knowledge of IT professionals in designing, implementing, and managing HPE compute solutions. HPE0-S59 Exam is ideal for individuals who want to pursue a career as an HPE compute solutions architect or engineer. The HPE0-S59 exam covers various topics, including server architecture and technology, storage solutions, networking, virtualization, and cloud computing.

HPE0-S59 Practice Dumps Materials: HPE Compute Solutions - HPE0-S59

Study Guide - TestPDF

Remember that this is a crucial part of your career, and you must keep pace with the changing time to achieve something substantial in terms of a certification or a degree. So do avail yourself of this chance to get help from our exceptional HPE Compute Solutions (HPE0-S59) dumps to grab the most competitive HPE Compute Solutions (HPE0-S59) certificate.

HPE Compute Solutions Sample Questions (Q58-Q63):

NEW QUESTION # 58
What should be considered when validating a solution design's compatibility with existing infrastructure?

- A. Only the physical dimensions of new hardware
- B. The color scheme of existing hardware
- C. The age of the existing hardware
- D. The compatibility of hardware and software components

Answer: D

NEW QUESTION # 59
Match HPE SimpliVity term with the definition.

Answer:

Explanation:

Explanation:
Here are the correct matches for each HPE SimpliVity term with their respective definitions:
* Arbiter Definition: Facilitates communication between nodes and resolves state conflicts to ensure service continuity.
* Compute node Definition: Non-hyperconverged servers that can exist in an HPE SimpliVity environment and provide additional compute capacity while consuming the storage provided by the hyperconverged nodes.
* Management Virtual Controller Definition: Provides centralized management and events end-point for vCenter.
* Intelligent Workload Optimizer Definition: Integrates with VMware Distributed Resources Scheduler to ensure optimal placement of the VM compute resources.
* Arbiter: This component is essential for ensuring that the HPE SimpliVity nodes communicate properly and that any state conflicts are resolved, which is critical for maintaining service continuity.
* Compute node: These are non-hyperconverged servers that add additional compute capacity to the HPE SimpliVity environment. They utilize the storage resources provided by the hyperconverged nodes.
* Management Virtual Controller: This controller is responsible for centralized management and acts as the events end-point for vCenter, allowing for streamlined management of the SimpliVity environment.
* Intelligent Workload Optimizer: This tool integrates with VMware's Distributed Resources Scheduler (DRS) to ensure that virtual machine (VM) compute resources are placed optimally across the infrastructure.

NEW QUESTION # 60
Your customer plans to add four HPE Synergy frames to an existing management ring Ail installed frames are equipped with two 2-port FLM modules, while new frames will be equipped with 4-port FLM modules.
Which statement about mixing different FLM modules is true?

- A. A management ring can contain mixed frame link module configurations
- B. Existing 2-port FLM modules must be replaced with 4-port FLM modules
- C. A management ring with mixed FLM modules cannot have more than 12 frames
- D. Mixing different FLM modules is allowed if all of them have the same firmware version

Answer: A

Explanation:
In HPE Synergy, a management ring can indeed contain mixed frame link module (FLM) configurations. This means you can have a mix of 2-port and 4-port FLM modules within the same management ring without needing to replace the existing 2-port modules. This flexibility allows for gradual upgrades and scalability within the management ring.

NEW QUESTION # 61
A junior architect designed a solution based on HPE Synergy that must meet the following requirements:
- Support at least 30 HPE Synergy 480 Gen10 Plus compute modules
- Interconnect modules must provide MAC and WWN virtualization
- All HPE Synergy frames must formulate a single management entity
- The management appliance should not be a single point of failure
- Connectivity to FC array should be available to all compute nodes
The proposal consists of:
- 3 HPE Synergy 12000 frames
- 6 HPE Composer 2 modules
- 2 HPE Virtual Connect SE 100Gb F32 Module
- 4 HPE Synergy 50Gb Interconnect Link Module
Which statements about this proposed design are true? (Select two)

- A. The selected interconnect modules do not provide the requested WWN virtualization.
- B. HPE Synergy 50Gb ILMs must be replaced with HPE Virtual Connect SE 100Gb F32 modules.
- C. The current setup can support up to 18 HPE Synergy 480 Gen10 Plus compute modules.
- D. FC upgrade licenses for HPE Virtual Connect SE 100Gb F32 Module must be added.
- E. Remove 4 HPE Composer 2 modules from the design, as they are not required.

Answer: A,E

NEW QUESTION # 62
What is a limitation when creating a server profile?

- A. ILO management is limited to the integration with Active Directory or LDAP
- B. Administrator cannot define more than 8 connections within a server profile
- C. BIOS settings can be changed only when UEFI optimized is selected as boot mode
- D. It is not possible to create shared volumes on demand through a server profile

Answer: D

Explanation:
A limitation when creating a server profile in HPE OneView is that it is not possible to create shared volumes on demand directly through a server profile. Server profiles in HPE OneView are used to define and manage the configuration of compute nodes, including network connections, BIOS settings, and boot order, but they do not have the capability to dynamically create or manage shared storage volumes.
