## Pass Guaranteed Quiz High-quality Microsoft - New AZ-500 Exam Format

Life will always face a lot of choices. When we choose to work, we will also be selected by the job in reverse. And today, in an era of fierce competition, how can we occupy a place in a market where talent is saturated? The answer is a certificate. What the certificate main? All kinds of the test Microsoft certification, prove you through all kinds of qualification certificate, it is not hard to find, more and more people are willing to invest time and effort on the AZ-500 Study Materials, because get the test AZ-500 certification is not an easy thing, so, a lot of people are looking for an efficient learning method. And here, fortunately, you have found the AZ-500 study materials, a learning platform that can bring you unexpected experiences.

By earning the Microsoft AZ-500 Certification, IT professionals can demonstrate their proficiency in securing Microsoft Azure services and infrastructure, which is becoming increasingly important as more organizations move their workloads to the cloud. Microsoft Azure Security Technologies certification can help professionals advance their careers and open up new opportunities for them in the field of cloud security.

**There are various topics included in Microsoft AZ-500 that you should master during your preparation time. They are as follows:**

- Manage Identity and Access;
- Manage Security Operations;
- Implement Platform Protection.
- Secure Data and Applications;

All of these domains are separated into different sections and each has its own percentage rate of occurring during your test. Therefore, we recommend that you check the official certification page to know the additional details that will help you during your preparation.

## What skills outline should the learners explore?

The Microsoft AZ-500 exam covers four major topics, which are as follows:

### Managing identity and access

- Managing access control: the test takers should be able to customize resource and subscription permissions; configure custom RBAC roles; customize resource group permissions; define the appropriate role; implement least privilege principle; interpret permissions; verify access.
- Managing Azure Active Directory identities: this requires one's competency in customizing security for service principals; managing Azure AD directory groups; managing Azure AD users; customizing password writeback; customizing authentication tools, such as Pass Through Authentication (PTA) and password hash, OAuth, and passwordless; transferring Azure subscriptions between Azure AD tenants.
- Managing application access: this includes creating App Registration; customizing App Registration permission scopes; managing API access to Azure subscriptions and resources; managing App Registration permission consent.
- Configuring secure access with the help of Azure AD: the examinees need to demonstrate their ability to verify privileged access to Azure AD Privileged Identity Management; customize Access Reviews; initiate and customize PIM; execute Conditional Access policies such as Multi-Factor Authentication (MFA); customize Azure AD identity protection.

## Microsoft Azure Security Technologies Sample Questions (Q264-Q269):

### NEW QUESTION # 264

You have an Azure subscription that contains an Azure key vault and an Azure SQL database named SQL1. You generate a key named Key1.

You need to enable Transparent Data Encryption (TDE) for SQL1 by using Key1.

Which two settings should you modify for Key1? To answer, select the appropriate settings in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows the configuration page for an RSA key named Key1 in an Azure Key Vault. The key is 2048 bits long and was created on 4/24/2023 at 7:39:34 PM. The key identifier is https://na230434.aadtt.azure.net/keys/Key1/81cb93e71e7e401095f37bb5841417dd. The expiration date is set to 8/15/2030 at 6:49:08 PM. The key is enabled and has the 'Wrap key' checkbox checked. The 'Usage key' checkbox is also checked. The 'Sign' checkbox is unchecked. The 'Microsoft' logo is visible in the bottom left corner.

**Answer:**

### NEW QUESTION # 265

You have an Azure Sentinel workspace that contains an Azure Active Directory (Azure AD) connector, an Azure Log Analytics query named Query1 and a playbook named Playbook1.

Query1 returns a subset of security events generated by Azure AD.

You plan to create an Azure Sentinel analytic rule based on Query1 that will trigger Playbook1.

You need to ensure that you can add Playbook1 to the new rule.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Create the rule and set the type to:

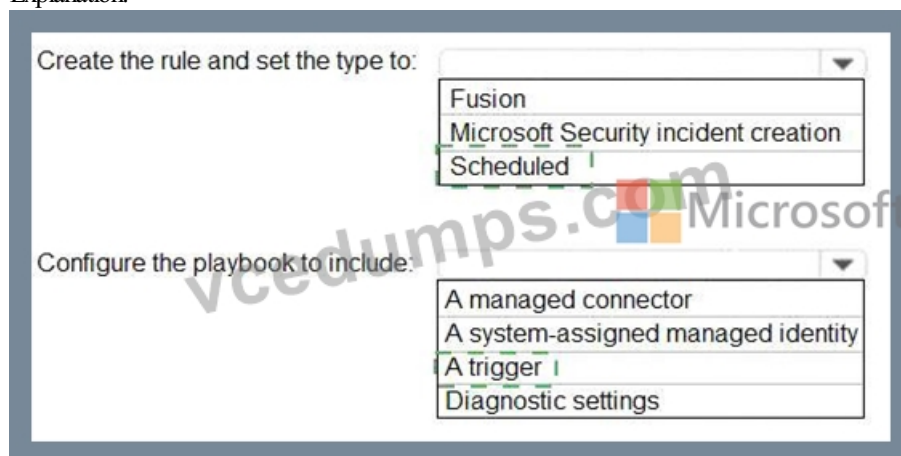

Fusion
Microsoft Security incident creation
Scheduled

Configure the playbook to include:

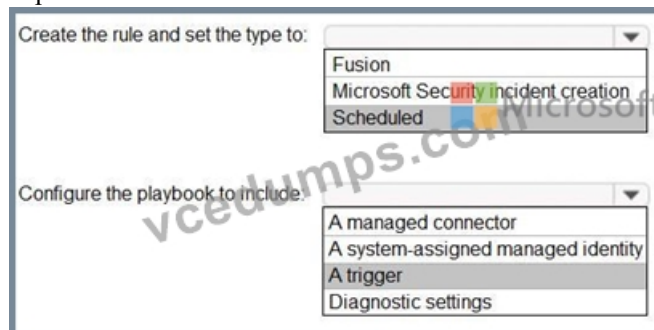

A managed connector
A system-assigned managed identity
A trigger
Diagnostic settings

**Answer:**

Explanation:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/sentinel/tutorial-detect-threats-custom>  
<https://docs.microsoft.com/en-us/azure/sentinel/tutorial-respond-threats-playbook>

### NEW QUESTION # 266

You have an Azure Active Directory (Azure AD) tenant that contains a user named Admin1. Admin1 is assigned the Application developer role.

You purchase a cloud app named App1 and register App1 in Azure AD.

Admin1 reports that the option to enable token encryption for App1 is unavailable.

You need to ensure that Admin1 can enable token encryption for App1 in the Azure portal.

What should you do?

- A. Modify the API permissions of App1.
- B. Upload a certificate for App1.
- C. Assign Admin1 the Cloud application administrator role.
- **D. Add App1 as an enterprise application.**

**Answer: D**

Explanation:

This is a tricky one because uploading a certificate is also required. However, the question states that the Token Encryption option is unavailable. This is because the app is not added as an enterprise application. When the app is added as an enterprise application, the Token Encryption option will be available. Then you can upload the certificate.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/howto-saml-token-encryption>

### NEW QUESTION # 267

You need to configure a virtual network named VNET2 to meet the following requirements:

- \* Administrators must be prevented from deleting VNET2 accidentally.
- \* Administrators must be able to add subnets to VNET2 regularly.

To complete this task, sign in to the Azure portal and modify the Azure resources.

See the explanation below.

### Answer:

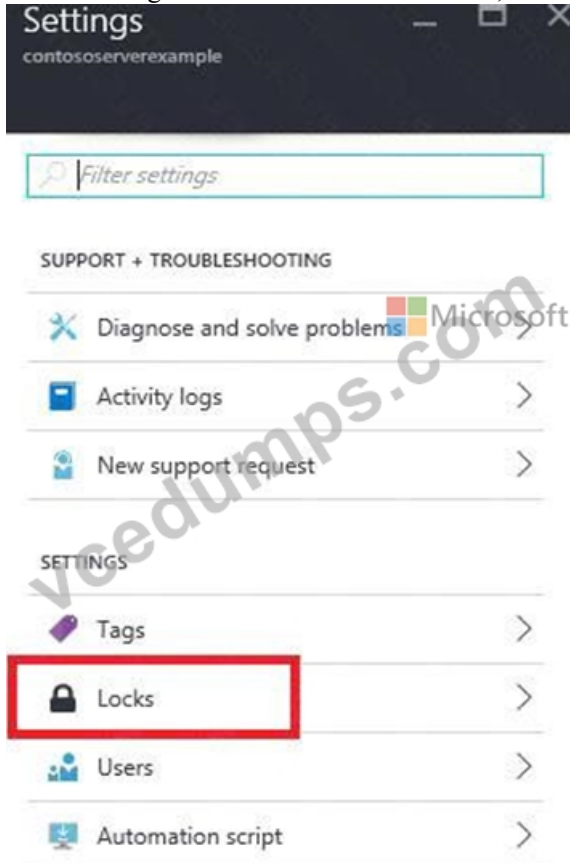

Explanation:

Explanation

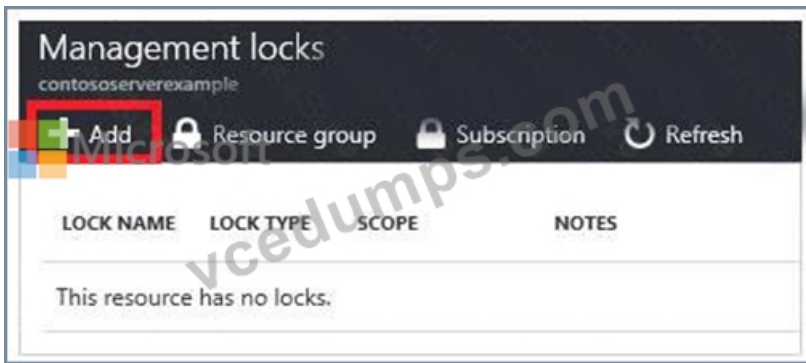

Locking prevents other users in your organization from accidentally deleting or modifying critical resources, such as Azure subscription, resource group, or resource.

Note: In Azure, the term resource refers to an entity managed by Azure. For example, virtual machines, virtual networks, and storage accounts are all referred to as Azure resources.

1. In the Azure portal, type Virtual Networks Virtual Networks from the search results then select VNET2. Alternatively, browse to in the left navigation pane.
2. In the Settings blade for virtual network VNET2, select

3. To add a lock, select Add.

4. For Lock type select Delete lock

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-group-lock-resources>

### NEW QUESTION # 268

You have an Azure subscription.

You need to create and deploy an Azure policy that meets the following requirements:

When a new virtual machine is deployed, automatically install a custom security extension.

Trigger an autogenerated remediation task for non-compliant virtual machines to install the extension.

What should you include in the policy? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Definition effect:

▼

- Append
- DeployIfNotExists
- EnforceOPAConstraint
- EnforceRegoPolicy
- Modify

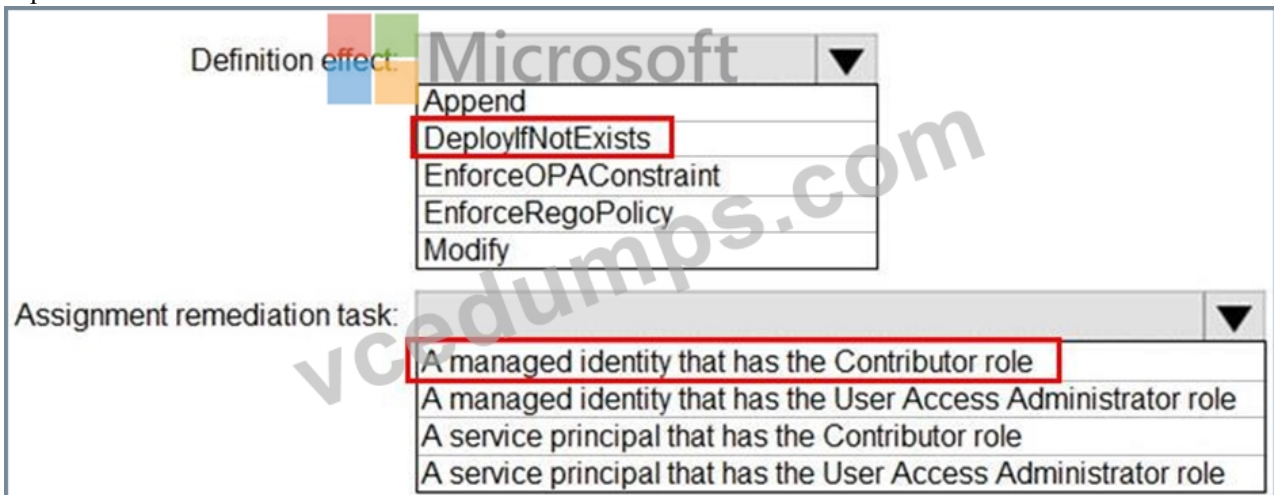

Assignment remediation task:

▼

- A managed identity that has the Contributor role
- A managed identity that has the User Access Administrator role
- A service principal that has the Contributor role
- A service principal that has the User Access Administrator role

**Answer:**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/governance/policy/how-to/remediate-resources>

## NEW QUESTION # 269

.....

Only if you download our software and practice no more than 30 hours will you attend your test confidently. Because our AZ-500 exam torrent can simulate limited-timed examination and online error correcting, it just takes less time and energy for you to prepare the AZ-500 exam than other study materials. It is very economical that you just spend 20 or 30 hours then you have the AZ-500 certificate in your hand, which is typically beneficial for your career in the future. Therefore, purchasing the AZ-500 guide torrent is the best and wisest choice for you to prepare your test.
