**Plat-Dev-210 dumps VCE, Plat-Dev-210 dumps for free**

You may be given the Salesforce Plat-Dev-210 practice exam results as soon as they have been saved in the software. Prep4pass modified Salesforce Plat-Dev-210 exam dumps allow students to learn effectively about the real Salesforce Plat-Dev-210 Certification Exam. Salesforce Plat-Dev-210 practice exam software allows students to review and refine skills in a preceding test setting.

## Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.</li> </ul>

## Salesforce Certified Omnistudio Developer Sample Questions (Q13-Q18):

### NEW QUESTION # 13

An OmniScript displays data from an API using Integration Procedure, but some of the data is missing. Which two configuration errors could cause this? Choose 2 answers

- A. The Integration Procedure Preview Input Parameters do not match the JSON sent from the OmniScript.
- B. The JSOW sent from the Integration Procedure Action does not match any of the Original Input for the Integration Procedure
- C. The missing data is trimmed in the Integration Procedure Action Response JSON Path.
- D. The element name for the missing data does not match the JSON node key in the Integration Procedure Response.

**Answer: B,D**

Explanation:

The element name for the missing data must match the JSON node key in the Integration Procedure Response, otherwise the data will not be mapped correctly. The JSON sent from the Integration Procedure Action must match one of the Original Input for the Integration Procedure, otherwise the Integration Procedure will not execute properly. The Integration Procedure Preview Input Parameters and the Response JSON Path have no effect on displaying data in OmniScript.

### NEW QUESTION # 14

In a calculation procedure, what is required for the output of a calculation step to be used in an aggregation step?

- A. It must be a calculation step.
- B. It must be included in constants.
- C. It must be included in the calculation output.
- D. It must be a matrix lookup step.

**Answer: C**

Explanation:

In a calculation procedure, the output of a calculation step must be included in the calculation output in order to be used in an aggregation step. The calculation output defines the variables that are available for aggregation

#### NEW QUESTION # 15

A developer needs to configure a DataRaptor to retrieve data from a single object. The structure of the output data does not need to be changed.

Following best practices, which type of DataRaptor should the developer use?

- A. DataRaptor Turbo Extract
- B. DataRaptor Load
- C. DataRaptor Extract
- D. DataRaptor Transform

**Answer: A**

Explanation:

A DataRaptor Turbo Extract is a simplified version of a DataRaptor Extract that can retrieve data from a single object without changing the structure of the output data. It is suitable for this scenario because the developer does not need to transform or load the data

#### NEW QUESTION # 16

A developer needs to limit the output of a Data Mapper Extract to a maximum of one result.

How should the developer configure this?

- A. Use the LIMIT filter on the Extract definition.
- B. Define a formula with the Filter function.
- C. Set the Limit property on the action that calls the Data Mapper Extract.
- D. Use a Custom Output Type when creating the Data Mapper.

**Answer: C**

Explanation:

According to the OmniStudio DataRaptor Extract documentation, if a developer wants to limit the number of records returned, the best way is to set the "Limit" property on the element or action that is calling the DataRaptor, such as in an Integration Procedure or OmniScript Action.

\* A. Set the Limit property on the action that calls the Data Mapper Extract - This is the correct method. The calling context (e.g., OmniScript Action or Integration Procedure) includes a property for setting the limit on query results, which is a recommended and clean method to ensure only one record is retrieved.

Incorrect Options:

\* B. There is no "LIMIT" clause within the DataRaptor Extract definition UI or JSON definition itself.

\* C. Custom Output Type controls the structure, not the quantity of output.

\* D. The Filter function applies conditional logic, not record count.

Salesforce OmniStudio Developer Guide # DataRaptor Extract Configuration

#### NEW QUESTION # 17

A developer has a requirement to create a child FlexCard that contains all of its parent FlexCard's records In a Datable How should the developer configure the parent FlexCard's Node?

- A. {Records}
- B. {Recorded}
- C. {Params, records}
- D. {Records Plat-Dev-210}

**Answer: A**

Explanation:
