

# VMware 3V0-23.25 Exam Score, 3V0-23.25 Valid Study Guide

VMware 3V0-32.23 Certification Details	
Exam Code	3V0-32.23
Full Exam Name	VMware Cloud Management and Automation Advanced Design
No. of Questions	60
Online Practice Exam	<a href="#">VMware Certified Advanced Professional - Cloud Management and Automation Design 2023 (VCAP-CMA Design 2023) Practice Test</a>
Sample Questions	<a href="#">VMware 3V0-32.23 Sample Questions</a>
Passing Score	300 / 500
Time Limit	145 minutes
Exam Fees	\$450 USD

Become successful with [VMExam.com](#)

You can directly refer our VMware 3V0-23.25 study materials to prepare the exam. Once the newest test syllabus is issued by the official, our experts will quickly make a detailed summary about all knowledge points of the real VMware 3V0-23.25 Exam in the shortest time. All in all, our 3V0-23.25 exam quiz will help you grasp all knowledge points.

In this age of the Internet, do you worry about receiving harassment of spam messages after you purchase a product, or discover that your product purchases or personal information are illegally used by other businesses? Please do not worry; we will always put the interests of customers in the first place, so 3V0-23.25 study materials ensure that your information will not be leaked to any third party. After you pass the exam, if you want to cancel your account, contact us by email and we will delete all your relevant information. Second, the purchase process of 3V0-23.25 Study Materials is very safe and transactions are conducted through the most reliable guarantee platform. Last but not least, our website platform has no viruses and you can download 3V0-23.25 study materials at ease. If you encounter difficulties in installation or use of 3V0-23.25 study materials, we will provide you with remote assistance from a dedicated expert.

## Avail the Best Accurate 3V0-23.25 Exam Score to Pass 3V0-23.25 on the First Attempt

Are you still hesitating about which kind of 3V0-23.25 exam torrent should you choose to prepare for the exam in order to get the related certification at ease? Our 3V0-23.25 Exam Torrent can help you get the related certification at ease and 3V0-23.25 Practice Materials are compiled by our company for more than ten years. I am glad to introduce our study materials to you. Our company has already become a famous brand all over the world in this field since we have engaged in compiling the 3V0-23.25 practice materials for more than ten years and have got a fruitful outcome. You are welcome to download it for free in this website before making your final decision.

## VMware Advanced VMware Cloud Foundation 9.0 Storage Sample Questions (Q13-Q18):

### NEW QUESTION # 13

A Solutions Architect is designing a new VCF Workload Domain that combines advanced vSAN Data Protection with Storage Policy Based Management (SPBM) rules.

The requirements stipulate:

1. VMs must be locally protected with FTT=2 (RAID-6).
2. VMs must be replicated to a remote cluster with an RPO of 30 minutes.
3. The replicated data on the remote site must be immutable for 5 days.

The architect creates the following SPBM policy to automate the provisioning:

...

```
# SPBM Policy: "Secure-DR-Policy"  
[Capabilities]
```

Host.FailuresToTolerate: 2 (RAID-6)  
DataProtection.RemoteTarget: "DR-Cluster-02"  
DataProtection.RPO: 30 minutes  
DataProtection.Immutability: Enabled  
DataProtection.Retention: 5 days  
...

How does the vCenter and vSAN integration handle the instantiation and lifecycle of this complex policy?  
(Select all that apply.)

- A. When a VM is assigned this policy, vCenter automatically creates the corresponding local and remote protection groups in the vSAN Data Protection interface.
- B. To achieve immutability on the remote site, "DR-Cluster-02" must be configured with an AWS S3 object-lock gateway, as local vSAN datastores cannot enforce time-based retention locks.
- C. The Host.FailuresToTolerate: 2 (RAID-6) rule is applied to both the running VM on the source site AND the replicated snapshot object on the remote site, provided the remote site has 6+ hosts.
- D. If the user attempts to delete a snapshot manually before the 5-day retention period, the vSAN DOM will reject the API call due to the immutability flag.

**Answer: A,C,D**

#### NEW QUESTION # 14

A Network Administrator is troubleshooting an HCI Mesh configuration between Cluster-A (Server) and Cluster-B (Client). The administrator attempts to mount Cluster-A's vSAN datastore onto Cluster-B, but the operation fails. The administrator checks the Skyline Health dashboard on vCenter:

...  
[Skyline Health > vSAN > HCI Mesh]  
Check: Remote Datastore Connectivity  
Status: Failed  
Source: Cluster-B (Client)  
Target: vsanDatastore-Cluster-A  
Details: 2 of 16 hosts failed ping  
Check: MTU Uniformity  
Status: Warning (Mismatch detected)  
...

Based on the health output and HCI Mesh requirements, which TWO actions will resolve this mounting failure? (Choose 2.)

- A. Ensure that ALL hosts in Cluster-B can ping ALL hosts in Cluster-A over the vSAN network.
- B. Disconnect the 2 failing hosts from Cluster-B temporarily, as HCI Mesh supports partial cluster mounts.
- C. Standardize the MTU settings across the entire L2/L3 transit path between Cluster-A and Cluster-B vSAN networks.
- D. Enable Promiscuous Mode on the Distributed Port Group used by Cluster-B to bypass the MTU mismatch.

**Answer: A,C**

#### NEW QUESTION # 15

An administrator is monitoring a vSAN ESA backed workload domain that is dedicated for running AI inferencing. When the administrator navigates to the Storage Performance dashboard in VMware Cloud Foundation Operations, the performance dashboard shows:

- \* High backend write latency (> 8 ms)
- \* Low read latency (< 1 ms)
- \* Normal network throughput
- \* Disk Group Health = Green

Based on the readings above, what would be the explanation?

- A. A wrongly sized read cache tier is throttling the write buffer, thus forcing the reads to trespass to the capacity tier.
- B. This is caused due to transient commit-queue delays, since the workload is exhibiting random-writes saturating ESA's write buffer.
- C. A vSAN network congestion event on the vSAN TCP port 2233 is throttling mirror acknowledgements.
- D. The workload's small-block writes are compressed inline, lowering backend throughput and increasing cache misses.

**Answer: B**

Explanation:

The readings indicate a write-path pressure condition rather than a read-cache, network, or device-health issue. In vSAN ESA, storage devices are organized into a storage pool architecture where NVMe devices contribute both capacity and performance. The dashboard shows low read latency and normal network throughput, so the read path and vSAN network are not the likely bottlenecks. Disk Group Health being green also rules out an obvious device or pool-health failure. AI inferencing environments can still create bursts of small random writes from logs, metadata updates, temporary files, checkpoints, and application-side write activity. When backend write latency rises while reads remain low, the most likely explanation is transient write-buffer or commit-queue pressure. ESA does not use the traditional OSA read-cache tier model, so option B is incorrect. ESA also does not rely on OSA-style inline deduplication and compression behavior for the stated cause, making option C incorrect. Normal network throughput makes option D unlikely. Reference topics: vSAN ESA Architecture, Storage Pool Metrics, Backend Write Latency, VCF Operations Storage Performance.

### NEW QUESTION # 16

A SOC Analyst is engaged after a VCF SDDC Manager automated capacity alert triggered at 2:00 AM.

'''

[SDDC Manager - Workload Domain Threshold Alert]

Cluster: WLD01-Cluster

vSAN Consumed: 83%

Host Rebuild Reserve: Breached

Action Initiated: Proactive Write Throttling

[Architecture Diagram Snapshot]

4-Node vSAN OSA All-Flash Cluster.

No physical disks have failed. No maintenance windows are active.

'''

How does the interaction between the cluster topology size and the "Host Rebuild Reserve" logic explain this capacity breach, and what are the operational impacts? (Select all that apply.)

- A. Because  $83\% + 25\% \text{ reserve} > 100\%$ , the cluster has mathematically run out of space to tolerate a host failure, triggering the breach alert despite having 17% absolute free space on the drives.
- B. Proactive Write Throttling deliberately introduces extreme latency to incoming VM write requests (backpressure) to prevent the cluster from hitting 100% and completely locking up.
- C. To resolve this without deleting data, the analyst must initiate the "Scale-Out" workflow in SDDC Manager to add a 5th host, which recalculates the Host Rebuild Reserve from 25% down to 20%.
- D. In a small 4-node cluster, the Host Rebuild Reserve must reserve exactly 25% of the total capacity (equivalent to one entire host) to ensure FTT=1 data can be rebuilt if a host dies.
- E. The Rebuild Reserve logic only applies to clusters larger than 8 nodes; this alert is a false positive generated by a misconfigured SDDC Manager profile.

**Answer: A,B,C,D**

### NEW QUESTION # 17

Which statement accurately defines the fundamental difference in how physical storage devices are organized and utilized in vSAN Original Storage Architecture (OSA) versus Express Storage Architecture (ESA)?

- A. In vSAN OSA, the hypervisor CPU performs deduplication during the write ingestion phase, while vSAN ESA utilizes hardware offloading on the NVMe drives to handle parity calculations.
- B. vSAN OSA utilizes standard block-level mapping for virtual disks, whereas vSAN ESA maps virtual machine data directly to individual physical NVMe namespaces bypassing the Distributed Object Manager (DOM).
- C. vSAN OSA rigidly organizes drives into Disk Groups with a dedicated cache tier, whereas vSAN ESA eliminates Disk Groups entirely to form a single-tier Storage Pool where every NVMe device contributes to both performance and capacity.
- D. vSAN ESA requires distinct, dedicated Read-Intensive NVMe drives for capacity and Write-Intensive NVMe drives for cache, whereas OSA supports single-tier hybrid designs.

**Answer: C**

## NEW QUESTION # 18

.....

FreeCram exam study material is essential for candidates who want to appear for the Advanced VMware Cloud Foundation 9.0 Storage (3V0-23.25) certification exams and clear it to validate their skill set. This preparation material comes with Up To 1 year OF Free Updates And Free Demos. Place your order now and get real VMware 3V0-23.25 Exam Questions with these offers.

**3V0-23.25 Valid Study Guide:** <https://www.freecram.com/VMware-certification/3V0-23.25-exam-dumps.html>

VMware 3V0-23.25 Exam Score Our test engine will be your best helper before you pass the exam, Maybe this is the first time you choose our 3V0-23.25 practice materials, so it is understandable you may wander more useful information of our 3V0-23.25 exam dumps, As soon as you enter the learning interface of our system and start practicing our VMware 3V0-23.25 learning materials on our Windows software, you will find small buttons on the interface, We want you to know if you are looking for high-quality 3V0-23.25 study guide you should consider us first.

Even when just running a focused set of tests around the current area of 3V0-23.25 development, I was seeing multi-second run times, In this chapter, Paul C, Our test engine will be your best helper before you pass the exam.

## Verified 3V0-23.25 Exam Score | Easy To Study and Pass Exam at first attempt & Authorized 3V0-23.25: Advanced VMware Cloud Foundation 9.0 Storage

Maybe this is the first time you choose our 3V0-23.25 practice materials, so it is understandable you may wander more useful information of our 3V0-23.25 exam dumps.

As soon as you enter the learning interface of our system and start practicing our VMware 3V0-23.25 learning materials on our Windows software, you will find small buttons on the interface.

We want you to know if you are looking for high-quality 3V0-23.25 study guide you should consider us first, Reading Requirements: PC must be installed Acrobat Reader.
