Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q104-Q109):

NEW QUESTION # 104

Which three file extensions are allowed in a Lightning Web Component folder?

- A. .js-meta.xml
- B. .gif
- C. .html
- D. .Js
- E. .jar

Answer: A,C,D

Explanation:

In a Lightning Web Component folder, the allowed file extensions include .js-meta.xml for the component's metadata, .html for the component's markup, and .js for the component's JavaScript class. These files are essential for defining the structure, behavior, and metadata of a LWC. Salesforce LWC documentation provides detailed information on the structure of a LWC bundle and the purpose of each file type within it.

NEW QUESTION # 105

Which two statement are true for Mass Order (2 answers)

- A. Mass order works with the default wishlists
- B. Mass Order pricing is done via a batch job.
- C. Mass Order is mobile ready with the ccrz templates.
- D. The variation product is leveraged for SKUs.

Answer: B,D

Explanation:

Mass Order pricing is done via a batch job, which means that the prices are not calculated in real time, but rather at a scheduled time. Mass order works with the variation product, which is a product that has multiple SKUs with different attributes, such as size or color. Mass order does not work with the default wishlists, which are used to store products that the customer wants to buy later. Mass order is not mobile ready with the ccrz templates, which are the default templates for the storefront pages. Salesforce B2B Commerce Developer Guide: Mass Order, B2B Commerce Developer Guide: Variation Products

NEW QUESTION # 106

Universal Containers (UC) is ready to build a tax provider class using the interfaces available in the Buyer Experience SDK. When creating a tax provider, what are three things that a developer should consider first?

- A. How to handle results
- B. Whether to use JSON or XML
- C. Steps to complete in the Tax Service
- D. What to implement
- E. What events to fire in the Lightning web component

Answer: A,C,D

Explanation:

When creating a tax provider, three things that a developer should consider first are: steps to complete in the tax service, how to handle results, and what to implement. Steps to complete in the tax service are the actions that the developer needs to perform to connect to and use the third-party tax service provider's API or service. These steps may include authentication, authorization, request formatting, response parsing, error handling, and logging. How to handle results are the actions that the developer needs to perform to process and apply the tax calculation results from the tax service to the cart or order. These actions may include creating or updating cart items with type of Charge and charge type of Tax, applying tax adjustments or exemptions, and displaying tax amounts and details on the storefront. What to implement are the methods that the developer needs to define in their custom Apex

class that implements the `sfdc_checkout.TaxCalculations` interface. The interface provides methods for customizing the tax calculation logic for a cart or an order, such as `getTaxRatesAndRules`, `applyTaxAmountsAndAdjustments`, and `handleTaxErrorsAndExceptions`. Whether to use JSON or XML is not something that the developer should consider first, as it is not a critical or relevant factor for creating a tax provider. It may depend on the format that the tax service provider supports or prefers, but it does not affect the overall functionality or performance of the tax integration. What events to fire in the Lightning web component is not something that the developer should consider first either, as it is not related to creating a tax provider. It may be an optional feature that the developer can add to enhance the user interface or user experience of their storefront, but it does not affect the core logic or functionality of the tax integration. Salesforce B2B Commerce Developer Guide: Tax Integration, [B2B Commerce Developer Guide: Tax Calculations Interface]

NEW QUESTION # 107

How should a developer get the grand total amount, including shipping and tax, for items in the cart and in the currency of the cart, when developing a new Lightning web component for an Aura storefront cart page?

- A. `{!Cart.Details.grandTotal}`
- B. `{!Cart.Fields.grandTotal}`
- C. `{!Cart.Details.Fields.grandTotal}`
- D. `{!Cart.Totals.grand Total}`

Answer: C

Explanation:

According to the B2B Commerce Developer Guide, the `ICart` interface provides access to the cart object and its related data. The `Details` property of the `ICart` interface returns an `ICartDetails` object, which contains information about the cart such as the currency, the subtotal, the shipping cost, the tax, and the grand total. The `Fields` property of the `ICartDetails` interface returns a map of field names and values for the cart object. Therefore, to get the grand total amount for items in the cart and in the currency of the cart, a developer should use the expression `{!Cart.Details.Fields.grandTotal}`, which returns the value of the `grandTotal` field from the cart object. B2B Commerce Developer Guide, `ICart` Interface, `ICartDetails` Interface

NEW QUESTION # 108

Which component can be used in other Salesforce Experience templates outside of B2B Commerce?

- A. Product Detail Data
- B. Results Layout
- C. CMS Collection
- D. Quick Order

Answer: C

Explanation:

In Salesforce Experience Cloud, components like CMS Collection and Results Layout are designed to be reusable across different Experience templates, not just limited to B2B Commerce. CMS Collection allows for the display of CMS content in a flexible and dynamic layout, while Results Layout can be used to present search or query results in a customizable format. Salesforce documentation on Experience Cloud components emphasizes the reusability and adaptability of these components across various templates and contexts.

NEW QUESTION # 109

.....

On our website, you have easy access to our free demos of our AP-202 exam braindumps. Once you apply for our free trials of the AP-202 study materials, our system will quickly send it via email. Last but not least, you are available for our free updated version of the AP-202 Real Exam. Whenever you have problems about our study materials, you can contact our online workers via email. We warmly welcome you to experience our considerate service.

AP-202 Actual Exam Dumps: <https://www.guidetorrent.com/AP-202-pdf-free-download.html>

Salesforce Reliable AP-202 Exam Vce Your satisfaction is our great concern, Because this is a defining moment in your career, do not undervalue the importance of our Salesforce AP-202 exam dumps, When you trust and rely on BrainDump Salesforce AP-202

Salesforce Developer latest simulation questions then your latest GuideTorrent AP-202 Salesforce Salesforce Developer exam papers will definitely be done in the right way and you can rock your way by getting Things can really be brought in control by relying completely on the Braindump's AP-202 audio training online and GuideTorrent AP-202 test dumps online and both these products can support and guide you perfectly to give you an amazing success in the Salesforce AP-202 Salesforce Developer latest audio lectures, With these two B2B Commerce for Developers Accredited Professional AP-202 practice exams, you will get the actual Salesforce AP-202 exam environment.

Most Reliable Salesforce AP-202 Passing Test Questions Answers, It may be that the person writing the requirements in the customer's organization is not the person who is the intended user.
