---

In your day-to-day life, things look like same all the time, but preparing for critical 2V0-15.25 practice exam is not one of those options. About the exam ahead of you this time, our 2V0-15.25 study braindumps will be your indispensable choices. Before you get the official one, you can estimate our quality by downloading the free demos. They are all masterpieces from professional experts and all content are accessible and easy to remember, so no need to spend a colossal time to practice on them. Just practice with our 2V0-15.25 Exam Guide on a regular basis and desirable outcomes will be as easy as a piece of cake. On some tricky questions, you don't need to think too much. Only you memorize our questions and answers of 2V0-15.25 study braindumps, you can pass exam simply.

## VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.</li> </ul>

## Pass Guaranteed 2026 VMware 2V0-15.25: Marvelous Exam VMware Cloud Foundation 9.0 Support Discount

The clients only need 20-30 hours to learn the 2V0-15.25 exam questions and prepare for the test. Many people may complain that we have to prepare for the test but on the other side they have to spend most of their time on their most important things such as their jobs, learning and families. But if you buy our 2V0-15.25 Study Guide you can both do your most important thing well and pass the 2V0-15.25 test easily because the preparation for the test costs you little time and energy.

### VMware Cloud Foundation 9.0 Support Sample Questions (Q48-Q53):

#### NEW QUESTION # 48

An administrator configures a new VMware Cloud Foundation (VCF) instance in a remote site using a vSAN Express Storage Architecture (ESA) for the workload domain cluster. vSAN ESA is configured with Auto- Policy Management and is designed to tolerate a single failure. The cluster experiences a hardware failure and on investigation, the administrator discovers that the affected objects did not re-protect and remain in a "Reduced availability with no rebuild" state.

How can the administrator explain why the vSAN objects did not rebuild as expected?

- A. The existing disk groups need to be expanded to support additional capacity.
- B. The storage devices are not certified for vSAN.
- C. The storage policy needs to be modified to support forced provisioning.
- **D. The number of ESX hosts doesn't support rebuilds during an outage.**

**Answer: D**

Explanation:

In VMware Cloud Foundation 9.0, using vSAN Express Storage Architecture (ESA) with Auto-Policy Management, the system automatically selects the correct storage policy based on the cluster size and desired failure protection. When the administrator configures tolerance for a single failure (FTT=1 using RAID-1 mirroring), vSAN ESA requires sufficient remaining hosts during a failure event to reprotect objects.

A minimum of 3 ESA-capable hosts is required for RAID-1, and re-protection after a failure requires enough hosts with available capacity to place new replica components. In small ESA clusters (e.g., 3 or 4 nodes), if one host fails, the remaining hosts may not meet the placement rules for automatic rebuild to restore compliance. ESA enforces strict placement rules to maintain consistent performance and resilience; if vSAN determines that object layout compliance cannot be restored without violating these rules, it enters Reduced availability with no rebuild state.

This behavior is expected and documented: rebuilds cannot occur if the cluster does not have sufficient hosts or free capacity to recreate absent components. The administrator's ESA configuration behaved correctly given the cluster size limitation, making B the correct answer.

#### NEW QUESTION # 49

An administrator attempts to add a new user (provideradmin05) within the VMware Cloud Foundation (VCF) Automation Provider Management Portal, however provideradmin05 cannot be found for import.

The following information is provided:

- \* The existing VCF Fleet uses VMware Identity Broker (VIDB) for single sign-on.
- \* VIDB uses Active Directory as the identity provider.
- \* A group named VCFA\_ProviderAdmins was created in Active Directory, populated with the appropriate user accounts and synchronized with VIDB.
- \* Five days later provideradmin05 was added to VCFA\_ProviderAdmins.

What will resolve this issue?

- A. In VCF Operations, disable VCF SSO for VCF Automation.
- B. In the VCF Automation Provider Management Portal, enable the Advanced Rights Bundle Mode.
- **C. In VCF Operations, manually resync the directory.**
- D. In the VCF Automation Provider Management Portal, import provideradmin05 as an LDAP user.

**Answer: C**

Explanation:

VMware Cloud Foundation (VCF) 9.x uses VMware Identity Broker (VIDB) as the central identity provider for the entire VCF fleet. VIDB synchronizes user and group metadata from the connected enterprise identity source, in this case Active Directory. When a user is added to an AD group after the group was already synced into VIDB, VIDB does not automatically resync group membership on demand unless a directory synchronization is performed.

In this scenario, the group VCFA\_ProviderAdmins was synchronized five days earlier. When the new user provideradmin05 was later added to the AD group, VIDB—and therefore the VCF Automation Provider Management Portal—does not recognize that new user until a manual directory resynchronization occurs from VCF Operations.

This operation forces VIDB to:

- \* Requery Active Directory
- \* Update group membership information
- \* Repopulate available users for import into VCF Automation

Options B and D are incorrect because they do not influence Identity Broker directory synchronization. Option C (disable VCF SSO) would break authentication and is not a valid solution.

## NEW QUESTION # 50

An administrator is attempting to activate a new vSphere Supervisor for use with VMware Cloud Foundation (VCF) Automation on a newly deployed cluster. In the VMware vSphere client, when going through the vSphere Supervisor activation having selected VCF Networking with VPC, the Virtual Private Cloud (VPC) Connectivity Profile dropdown is empty on the workload network page. The administrator verified that a Virtual Private Cloud (VPC) Connectivity Profile exists in NSX.

What is the cause of the issue?

- A. The default VPC has not been created.
- **B. The selected NSX Project is the Default Project.**
- C. The vSphere Supervisor control plane is set to high-availability.
- D. The TO gateway is in active/active mode.

**Answer: B**

Explanation:

When activating a vSphere Supervisor using VCF Networking with VPC, the Supervisor Workload Network must use a VPC Connectivity Profile. These profiles are scoped to an NSX Project, and cannot be consumed from the Default Project.

VCF Automation requires that:

- \* A custom NSX Project be used for VPC networking integrations.
- \* The Default Project cannot host Connectivity Profiles or VPC constructs intended for Supervisor activation.

Even though the administrator verified that a VPC Connectivity Profile exists in NSX, the Supervisor wizard will not display it if:

- \* The VPC Connectivity Profile belongs to a different project, or
- \* The current selection is the Default Project, which blocks visibility.

This exact behavior—empty VPC Connectivity Profile dropdown—is documented when attempting Supervisor activation under the Default NSX Project.

Option A (TO active/active) affects North-South routing but does not hide VPC profiles.

Option B (Supervisor HA mode) does not impact network profile selection.

Option D (missing default VPC) is incorrect because the wizard is complaining about availability of Connectivity Profiles, not VPC instances.

### NEW QUESTION # 51

An administrator is asked to create a second provider gateway (provider gateway 02) in VMware Cloud Foundation (VCF) Automation Region-A.

After launching the Create Provider Gateway workflow in the VCF Automation Provider Management Portal, no Tier-0 Gateway is available for assignment.

How would you resolve this issue?

- **A. Log into the NSX Manager, create a new TO Gateway.**
- B. Retry the Create Provider Gateway workflow.
- C. Log into the NSX Manager, create a new Tier-1 Gateway.
- D. Create a new Region.

**Answer: A**

Explanation:

In VMware Cloud Foundation 9.0, a Provider Gateway in VCF Automation is always backed by an existing Tier-0 or Tier-0 VRF gateway in NSX. When the administrator launches the Create Provider Gateway workflow and no Tier-0 gateways appear for assignment, this indicates that VCF Automation cannot discover any valid Tier-0 gateways in the associated region.

The VMware Cloud Foundation 9.0 documentation explicitly states that before adding a Provider Gateway, an administrator must first create an Active-Standby Tier-0 Gateway in NSX Manager. The Provider Gateway workflow only lists Tier-0 gateways that already exist and are properly configured in NSX. If none are present, the list will be empty.

From the documentation: "To add a provider gateway, first you must create an Active Standby tier-0 gateway in the NSX Manager associated with the region to back it." Provider gateways in VCF Automation are discovered from these preexisting Tier-0 gateways and cannot be created until they exist.

Creating a Tier-1 gateway (Option B) does not satisfy the requirement because Provider Gateways must map specifically to Tier-0, not Tier-1. Retrying the workflow (Option D) will not resolve the issue because the Tier-0 backing resource is missing. Creating a new region (Option A) is unnecessary unless required for other organizational reasons, and it still would not produce a Tier-0 gateway.

Therefore, the correct and verified solution is to log in to NSX Manager and create the required Tier-0 gateway, after which it will appear in the Provider Gateway creation workflow.

### NEW QUESTION # 52

In VMware Cloud Foundation (VCF) Automation an administrator is troubleshooting an issue with a newly created Organization. When the Organization administrator attempts to create a Namespace, they receive an error "Failed to list VPC after selecting a region."

The administrator logs into the NSX Manager for the Region and does not see an NSX Project for the Organization. What could cause these symptoms?

- A. The Provider Administrator hasn't granted the Organization Administrator role to the First User.
- **B. The Provider Administrator hasn't set up the Organization's Networking Configuration for the selected Region.**
- C. The Organization Administrator hasn't created a VPC in the selected Region.
- D. The Organization Administrator hasn't created a Project in the selected Region.

**Answer: B**

Explanation:

In VMware Cloud Foundation 9.0 Automation, every Organization requires a properly configured Networking Configuration for each Region in which it operates. This configuration step-performed by the Provider Administrator-creates the NSX Project corresponding to the Organization, enabling Namespace creation, VPC visibility, and workload provisioning.

The error "Failed to list VPC after selecting a region" combined with the absence of an NSX Project in NSX Manager is a direct indicator that the Organization's Networking Configuration was never initialized. VCF Automation automatically creates the NSX Project only when the Provider Admin completes this step.

Option B is invalid because the Organization Administrator cannot create NSX Projects manually; they are system-generated during networking setup.

Option C is incorrect because role assignment affects administrative permissions, not NSX project creation.

Option D is also incorrect-the Organization Admin cannot create a VPC until the NSX Project exists.

### NEW QUESTION # 53

.....

As for buying 2V0-15.25 questions and answers for the exam, people may have different concerns. Most candidates can pass the exam by using the 2V0-15.25 questions and answers of us just one time, we ensure you that we will give you refund if you can't pass. Or if you have other exams to attend, we can replace other 2 valid exam dumps for you, at the same time, if 2V0-15.25 Questions and answers you buy updates, you can also get the latest version for free. You just need to send us the failure scanned, and we will replace the exam dumps or return your money to you.
