

Complete Study Guide your ultimate companion for 2V0-11.25 Prep

DOWNLOAD the newest VCE4Plus 2V0-11.25 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=19UTsd0HCM1Z3SNAaDOWmH6XfuJrtNpW>

Candidates for the 2V0-11.25 exam can rely on our practice material because it is of the greatest quality and will assist them in preparing for the VMware certification test successfully on the first try. VCE4Plus's main goal is to offer 100% actual 2V0-11.25 Exam Questions in order to help applicants clear the 2V0-11.25 test in a short time. We are confident that our updated 2V0-11.25 practice questions will help you pass the VMware Cloud Foundation 5.2 Administrator (2V0-11.25) certification exam on the first attempt.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network storage design.
Topic 2	<ul style="list-style-type: none"> Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.
Topic 3	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 4	<ul style="list-style-type: none"> Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

Topic 5	<ul style="list-style-type: none"> VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.

>> 2V0-11.25 Valid Mock Test <<

100% Pass 2026 Authoritative 2V0-11.25: VMware Cloud Foundation 5.2 Administrator Valid Mock Test

The 2V0-11.25 quiz torrent we provide is compiled by experts with profound experiences according to the latest development in the theory and the practice so they are of great value. Please firstly try out our product before you decide to buy our product. It is worthy for you to buy our 2V0-11.25 exam preparation not only because it can help you pass the exam successfully but also because it saves your time and energy. If you buy our 2V0-11.25 Test Prep you will pass the exam easily and successfully, and you will realize you dream to find an ideal job and earn a high income.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q16-Q21):

NEW QUESTION # 16

When configuring a new port group on a Virtual Distributed Switch (VDS), what is the purpose of setting a VLAN ID?

- A. To automate the creation of VMs within the port group.
- **B. To segment and isolate network traffic.**
- C. To enable load balancing across multiple uplinks.
- D. To manage storage replication settings

Answer: B

Explanation:

Setting a VLAN ID on a port group on a Virtual Distributed Switch (VDS) allows for network segmentation by tagging traffic with the appropriate VLAN ID. This enables isolation of network traffic between different VLANs, ensuring that communication is restricted to specific segments of the network as required.

NEW QUESTION # 17

An administrator has been tasked with adding a new VI workload Domain to an instance of VMware Cloud Foundation (VCF).

The administrator only has two prepared ESXi host servers showing in SDDC Manager.

The new VI Workload Domain must use vSphere Lifecycle Images.

Which three supported principal storage options are available to the administrator when configuring the new VI Workload Domain? (Choose three.)

- **A. VMFS on FC**
- B. VMFS on local disk
- C. vSAN
- D. iSCSI
- **E. vVols**
- **F. NFS v3**

Answer: A,E,F

NEW QUESTION # 18

Which step must an administrator take to configure Application Virtual Networks (AVNs) from SDDC Manager while preparing to deploy VMware Aria Suite Lifecycle?

- **A. Deploy NSX Edge Cluster.**
- B. Assign AVNs to specific ESXi hosts.
- C. Enable AVNs in the vCenter Server.
- D. Ensure that an NSX load balancer is available.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Before configuring Application Virtual Networks (AVNs) from SDDC Manager, the administrator must deploy an NSX Edge Cluster. The official VMware Cloud Foundation documentation specifies that an NSX Edge Cluster is required to provide the necessary network services and routing capabilities for AVNs, which are used to support management components such as VMware Aria Suite Lifecycle. Without the NSX Edge Cluster, AVN creation and related network functionalities cannot be configured or used from SDDC Manager. Steps such as enabling AVNs in vCenter Server, ensuring a load balancer, or assigning AVNs to specific ESXi hosts are not the prerequisites required by the workflow.

NEW QUESTION # 19

What are three prerequisites for deploying an NSX Edge cluster in a VMware Cloud Foundation (VCF) solution? (Choose three.)

- **A. Create DNS entries for the NSX Edge nodes.**
- B. Set up vSAN storage policies for the Edge VMs.
- C. Configure BGP as a dynamic routing protocol on the physical switches.
- **D. Use separate VLAN IDs and subnets for the NSX host overlay and NSX Edge overlay networks.**
- E. Install Aria Operations and enable Edge Cluster monitoring.
- **F. Verify that the NSX host overlay VLAN and NSX Edge overlay VLAN are routed to each other.**

Answer: A,D,F

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

According to the VMware Cloud Foundation 5.2 Planning and Preparation Guide and the VMware NSX-T Data Center Installation Guide, the following are critical prerequisites before deploying an NSX Edge cluster in a VCF environment:

B . Verify that the NSX host overlay VLAN and NSX Edge overlay VLAN are routed to each other.

Exact Extract:

"The NSX host overlay network and the NSX Edge overlay network must be able to route traffic between each other to allow tunnel establishment and VM-to-edge connectivity." (VMware NSX-T Data Center Installation Guide, VMware Cloud Foundation Planning and Preparation Guide) C . Create DNS entries for the NSX Edge nodes.

Exact Extract:

"You must create forward and reverse DNS records for each NSX Edge node before deployment. DNS resolution is required for NSX Manager and general network functionality." (VMware Cloud Foundation Planning and Preparation Guide) D . Use separate VLAN IDs and subnets for the NSX host overlay and NSX Edge overlay networks.

Exact Extract:

"The NSX host overlay and the NSX Edge overlay must be on different VLANs and subnets to ensure proper logical separation and traffic flow within the NSX infrastructure." (VMware NSX-T Data Center Installation Guide, VMware Cloud Foundation Planning and Preparation Guide) Why Not the Other Options?

A: vSAN storage policies for Edge VMs are not a documented prerequisite for Edge deployment.

E: BGP configuration is required at a later stage for north-south routing, but not as a deployment prerequisite.

F: Aria Operations is optional and used for monitoring, not a deployment prerequisite.

Summary:

Before deploying an NSX Edge cluster in a VCF environment, you must:

Ensure routing between NSX host and Edge overlay VLANs (B),

Create DNS entries for the NSX Edge nodes (C),

Use separate VLAN IDs and subnets for host and Edge overlays (D).

These prerequisites are confirmed in the official VMware Cloud Foundation and NSX documentation.

NEW QUESTION # 20

An administrator needs to delete and re-deploy an NSX Edge cluster that was originally deployed from SDDC Manager and has downloaded the edge cleaner tool.

Where should the administrator run the tool to complete this task?
