

C1000-130 Exam Guide, C1000-130 Visual Cert Test

A graphic titled "C1000-130 Exam Detail" showing a table of exam information. The table has two columns: the first column lists the exam details, and the second column provides the corresponding values. The background of the graphic shows a stack of books and a laptop.

C1000-130 Exam Detail	
Exam Code	C1000-130
Full Exam Name	IBM Certified Administrator - Cloud Pak for Integration V2021.2
Number of Questions	62
Practice Exams	IBM C1000-130 Certification Practice Exams
Passing Score	86%
Time Limit	90 mins
Books / Training	Administrator IBM Cloud Pak for Integration

C1000-130 Visual Cert Test & Mock C1000-130 Exam

Today, the prevailing belief is that knowledge is stepping-stone to success. By discarding outmoded beliefs, our C1000-130 exam materials are update with the requirements of the authentic exam. To embrace your expectations and improve your value during your review, you can take joy and challenge the C1000-130 Exam may bring you by the help of our C1000-130 guide braindumps. You will be surprised by the high-effective of our C1000-130 study guide!

IBM Cloud Pak for Integration is a platform that offers businesses the ability to connect and integrate applications, systems, and data across multiple cloud environments. IBM C1000-130 Exam is designed to test the skills of professionals who are responsible for the administration of IBM Cloud Pak for Integration V2021.2.

IBM Cloud Pak for Integration V2021.2 Administration Sample Questions (Q58-Q63):

NEW QUESTION # 58

Given the high availability requirements for a Cloud Pak for Integration deployment, which two components require a quorum for high availability?

- A. Application Integration (App Connect)
- B. API Management (API Connect)
- C. Multi-instance Queue Manager
- D. Automation Assets
- E. Event Gateway Service

Answer: B,C

Explanation:

<https://www.ibm.com/docs/en/cloud-paks/cp-integration/2021.1?topic=installation-high-availability-considerations>

NEW QUESTION # 59

Which publicly available document lists known Cloud Pak for Integration problems and limitations?

- **A. IBM Cloud Pak for Integration - Known Limitations**
- B. IBM Cloud Pak for Integration - Q&A
- C. IBM Cloud Pak for Integration - Known Problems
- D. IBM Cloud Pak for Integration - Latest News

Answer: A

Explanation:

IBM provides a publicly available document that lists the known issues, limitations, and restrictions for each release of IBM Cloud Pak for Integration (CP4I). This document is called "IBM Cloud Pak for Integration - Known Limitations." It details any functional restrictions, unresolved issues, and workarounds applicable to the current and previous versions of CP4I.

This document helps administrators and developers understand current limitations before deploying or upgrading CP4I components. It is updated regularly as IBM identifies new issues or resolves existing ones.

Analysis of Incorrect Options:

A . IBM Cloud Pak for Integration - Q&A (Incorrect)

A Q&A section typically contains frequently asked questions (FAQs) but does not specifically focus on known issues or limitations.

C . IBM Cloud Pak for Integration - Known Problems (Incorrect)

IBM does not maintain a document explicitly titled "Known Problems." Instead, known issues are included under "Known Limitations." D . IBM Cloud Pak for Integration - Latest News (Incorrect) The "Latest News" section typically covers new features, updates, and release announcements, but it does not provide a dedicated list of limitations or unresolved issues.

IBM Support - Fixes and Known Issues

NEW QUESTION # 60

Which option should an administrator choose if they need to run Cloud Pak for Integration (CP4I) on AWS but do not want to have to manage the OpenShift layer themselves?

- A. Using the Terraform scripts for provisioning CP4I and OpenShift which are available on IBM's Github.
- **B. Deploy CP4I onto AWS ROSA.**
- C. Use the "CP4I Quick Start on AWS" to deploy.
- D. Use Installer-provisioned-Infrastructure to deploy OCP and CP4I onto EC2.

Answer: B

Explanation:

When deploying IBM Cloud Pak for Integration (CP4I) v2021.2 on AWS, an administrator has multiple options for managing the OpenShift layer. However, if the goal is to avoid managing OpenShift manually, the best approach is to deploy CP4I onto AWS ROSA (Red Hat OpenShift Service on AWS).

Why is AWS ROSA the Best Choice?

Managed OpenShift: ROSA is a fully managed OpenShift service, meaning AWS and Red Hat handle the deployment, updates, patching, and infrastructure maintenance of OpenShift.

Simplified Deployment: Administrators can directly deploy CP4I on ROSA without worrying about installing and maintaining OpenShift on AWS manually.

IBM Support: IBM Cloud Pak solutions, including CP4I, are certified to run on ROSA, ensuring compatibility and optimized performance.

Integration with AWS Services: ROSA allows seamless integration with AWS-native services like S3, RDS, and IAM for authentication and storage.

Why Not the Other Options?

B . Installer-provisioned Infrastructure on EC2 - This requires manual setup of OpenShift on AWS EC2 instances, increasing operational overhead.

C . CP4I Quick Start on AWS - IBM provides a Quick Start guide for deploying CP4I, but it assumes you are managing OpenShift

yourself. This does not eliminate OpenShift management.

D . Terraform scripts from IBM's GitHub - These scripts help automate provisioning but still require the administrator to manage OpenShift themselves.

Thus, for a fully managed OpenShift solution on AWS, AWS ROSA is the best option.

NEW QUESTION # 61

Which tool provides a tracing feature which allows visually following the journey of distributed transactions from the entry as an API to invocation of an integration flow, into an MQ queue?

- A. Asset Manager
- **B. Operations Dashboard**
- C. Confluent Platform
- D. Integration Designer

Answer: B

Explanation:

In IBM Cloud Pak for Integration (CP4I) v2021.2, the Operations Dashboard provides a tracing feature that allows users to visually track distributed transactions as they move through various integration components. This includes tracing the flow from an API entry point, through an integration flow, and into an IBM MQ queue.

Key Features of the Operations Dashboard:

Provides end-to-end tracing of transactions across multiple integration components.

Helps users visualize the journey of a request, including API calls, integration flows, and MQ interactions.

Supports troubleshooting by identifying performance bottlenecks and errors.

Displays real-time monitoring data, including latency and errors across the system.

Why Not the Other Options?

A . Asset Manager - This is used for managing, cataloging, and governing integration assets, but it does not provide tracing.

B . Integration Designer - This is used for designing integration flows but does not provide real-time tracing of transactions.

C . Confluent Platform - This is a Kafka-based event streaming platform, not a transaction tracing tool in CP4I.

NEW QUESTION # 62

Which component requires ReadWriteMany(RWX) storage in a Cloud Pak for Integration deployment?

- **A. CouchDB for Asset Repository**
- B. MQ multi-instance
- C. Event Streams
- D. API Connect

Answer: A
