

C1000-189 Useful Dumps - How to Prepare for IBM C1000-189 Exam

Actually, one of the most obvious advantages of our C1000-189 simulating questions is their profession, which is realized by the help from our experts. We invited a large group of professional experts who dedicated in this area for more than ten years. To improve the accuracy of the C1000-189 Guide preparations, they keep up with the trend closely. Every page of our C1000-189 practice engine is carefully arranged by them with high efficiency and high quality.

The IBM C1000-189 real questions are an advanced strategy to prepare you according to the test service. You can change the time and type of questions of the IBM C1000-189 exam dumps. C1000-189 practice questions improve your confidence and ability to complete the exam timely. We ensure success on the first attempt if you use our IBM C1000-189 Exam Dumps according to our instructions.

IBM C1000-189 Test Pdf & Simulations C1000-189 Pdf

To get better condition of life, we all need impeccable credentials of different exams to prove individual's capacity. However, weak C1000-189 practice materials may descend and impair your ability and flunk you in the real exam unfortunately. And the worst condition is all that work you have paid may go down the drain for those C1000-189 question torrent lack commitments and resolves to help custC1000-189omers. Moreover, only need to C1000-189 spend 20-30 is it enough for you to grasp whole content of C1000-189 practice materials that you can pass the exam easily, this is simply unimaginable.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q11-Q16):

NEW QUESTION # 11

By default, which rate limit is applied to Instana API calls for per hour usage?

- A. 1,000
- B. 5,000
- C. 6,000

- D. 10,000

Answer: B

Explanation:

Instana sets API rate limits to ensure fair resource usage and platform stability across accounts. According to the IBM Instana Observability documentation, "The default rate limit for the Instana REST API is 5,000 calls per hour per account." This policy is enforced automatically; when an account's API activity reaches the limit, further requests are temporarily blocked until the next hour begins. This guards against accidental overload as well as malicious consumption, and is fundamental for multi-tenant operation. Organizations may request increases for large-scale use cases, but 5,000 per hour is the standard value pre-configured for all accounts. Instana recommends that automation and integrations are engineered to respect this quota, using exponential backoff and batching if needed. Values such as 10,000, 6,000, or 1,000 are not defaults, and modifying them requires special support intervention.

NEW QUESTION # 12

What is a valid method for an administrator to delete the 2FA settings of a user?

- A. Use the kubectl-instana command line utility which provides the reset-2fa command.
- **B. Go to settings -> Users, select the user, and delete the 2FA settings there.**
- C. SSH into the Clickhouse database pod, use SQL to delete the 2FA entry from the user.
- D. Submit a delete request to the API with the user's email.

Answer: B

Explanation:

Per IBM Instana's security documentation, management of two-factor authentication (2FA) is controlled directly via administrative functions in the web UI. The guidance reads: "Administrators can remove a user's 2FA association by navigating to Settings > Users, choosing the user, and using the remove or reset 2FA option in the UI." This workflow is safe, auditable, and leaves a traceable event in the audit log, satisfying enterprise security policy requirements. Direct API or CLI deletion of 2FA is not the recommended (or documented) method for Instana-managed users, and database-level manipulation (D) is unsupported as it risks data corruption. The UI approach is verified for both on-premises and SaaS installations.

NEW QUESTION # 13

What is Instana's custom built software that is designed to monitor a specified technology?

- A. Service
- **B. Sensor**
- C. Profiling
- D. Tracer

Answer: B

Explanation:

Instana uses Sensors as specialized software components embedded within its agents to monitor and extract telemetry from various supported technologies. The verified documentation states: "Sensors are built-in modules that detect, identify, and monitor specific technologies such as databases, servers, run-times, and messaging systems." These components ensure that the agent collects targeted metrics, events, and traces optimized for individual stacks like MySQL, Kafka, or Java. When deployed, the Instana agent automatically discovers technologies running in the environment and loads corresponding Sensors dynamically, requiring minimal user configuration. Tracers handle transaction propagation, Profiling covers code-level performance, and Service is a higher abstraction in application topology-not individual monitoring logic. The Sensor concept remains core to Instana's automatic discovery and observability architecture as validated in IBM's architectural reference sections.

NEW QUESTION # 14

Which two methods can Instana administrators use to create an API token?

- **A. Personal API tokens**
- B. JSON Web tokens
- **C. Team API token**

- D. Sensor-specific API token
- E. Unit-specific API tokens

Answer: A,C

Explanation:

IBM Instana supports two primary methods for creating API tokens necessary for secure automation and integration: Team API tokens and Personal API tokens. The official documentation states: "API tokens for REST API access can be generated either on a per-user (personal) basis, or at the team level for shared automation use." Personal tokens are created from the user profile menu and scoped to an individual's permissions, supporting traceability and revocation. Team tokens are created under team or group settings and represent organizational integrations or CI/CD pipeline automation. JSON Web Tokens (A) are an industry token standard but not a creation flow in Instana. Unit- or Sensor-specific tokens are not supported (C, D); all automation integrations must use Personal or Team tokens, which are easily managed and rotated via the web UI for improved security hygiene.

NEW QUESTION # 15

What is the purpose of creating a custom service rule in Instana?

- A. To set a global service name for all calls
- B. To create a manual service configuration
- C. To apply the service.name tag of the infrastructure component
- **D. To map services using existing meta-information of the infrastructure component**

Answer: D

Explanation:

IBM Instana Observability enables users to create custom service rules to precisely associate telemetry with logical services using meta-information already present in infrastructure components. The documentation specifies: "Custom service rules enable mapping of discovered entities to meaningful service constructs, using labels, tags, or annotations present on infrastructure components." This supports the grouping and visualization of traffic/metrics for actual business workflows rather than default technical boundaries. By analyzing meta-data, such as Kubernetes labels, docker tags, or VM metadata, Instana automatically maps relevant requests and traces to the defined service names, improving observability and simplifying troubleshooting. Global service naming (A) and manual configuration (C) do not leverage infrastructure metadata and are not scalable in dynamic environments. Option D relies only on a service.name tag, missing broader meta-information mapping capabilities. The verified documentation supports answer B as the sole comprehensive approach for dynamic service discovery within Instana.

NEW QUESTION # 16

.....

Some customers might worry that passing the exam is a time-consuming process. Now our C1000-189 actual test guide can make you the whole relax down, with all the troubles left behind. Involving all types of questions in accordance with the real exam content, our C1000-189 exam questions are compiled to meet all of your requirements. The comprehensive coverage would be beneficial for you to pass the exam. Only need to spend about 20-30 hours practicing our C1000-189 study files can you be fully prepared for the exam. With deeply understand of core knowledge C1000-189 actual test guide, you can overcome all the difficulties in the way. So our C1000-189 exam questions would be an advisable choice for you.

C1000-189 Test Pdf: https://www.prep4pass.com/C1000-189_exam-braindumps.html

The service of Prep4pass C1000-189 Test Pdf, Take the situation into consideration our C1000-189 exam braindumps: IBM Instana Observability v1.0.277 Administrator - Professional have been designed test-oriented, Our C1000-189 exam files can help you clear exam and obtain exam certificate at the first attempt, We also hope you can believe that C1000-189 exam guide is definitely the most powerful weapon to help you pass the exam, Our C1000-189 practice exam is your best choice and the hit rate is up to almost 98%.

printable versionHide Answer Yes, the prices listed on our website are shown in C1000-189 United States dollars, Many of these speedups start from the Windows Control panel—which, by default, operates differently in Windows XP and Windows Vista.

C1000-189 Exam Questions & Answers: IBM Instana Observability v1.0.277 Administrator - Professional & C1000-189 Exam Braindumps

The service of Prep4pass, Take the situation into consideration our C1000-189 Exam Braindumps: IBM Instana Observability v1.0.277 Administrator - Professional have been designed test-oriented, Our C1000-189 exam files can help you clear exam and obtain exam certificate at the first attempt.

We also hope you can believe that C1000-189 exam guide is definitely the most powerful weapon to help you pass the exam, Our C1000-189 practice exam is your best choice and the hit rate is up to almost 98%.
