

Latest MuleSoft-Integration-Architect-I Exam Materials: Salesforce Certified MuleSoft Integration Architect I give you the most helpful Training Dumps

2026 Latest PassLeader MuleSoft-Integration-Architect-I PDF Dumps and MuleSoft-Integration-Architect-I Exam Engine Free Share: <https://drive.google.com/open?id=1U2ey0-cO5Y4RW8BzcoXSrJmqCpDJYIDv>

If you want to be the talent the society actually needs you must apply your knowledge into the practical working and passing the test MuleSoft-Integration-Architect-I certification can make you become the talent the society needs. If you buy our MuleSoft-Integration-Architect-I study materials you will pass the exam successfully and realize your goal to be the talent. We have been in this career for over ten years and we have been the leader in the market. Our MuleSoft-Integration-Architect-I Exam Question are always the latest and valid for you to pass the exam.

Salesforce MuleSoft-Integration-Architect-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Designing Automated Tests for Mule Applications: This topic covers unit test suites, and scenarios for integration and performance testing.
Topic 2	<ul style="list-style-type: none">• Designing Integration Solutions to Meet Persistence Requirements: It addresses the usage of VM queues and connectors, object stores and services, and stateful components configured with object stores.
Topic 3	<ul style="list-style-type: none">• Designing for the Runtime Plane Technology Architecture: It includes analyzing Mule runtime clusters, designing solutions for CloudHub, choosing Mule runtime domains, leveraging Mule 4 class loader isolation, and understanding the reactive event processing model.
Topic 4	<ul style="list-style-type: none">• Designing Integration Solutions to Meet Reliability Requirements: It includes selecting alternatives to traditional transactions, recognizing the purpose of various scopes and strategies, differentiating disaster recovery and high availability, and using local and XA transactions.
Topic 5	<ul style="list-style-type: none">• Applying DevOps Practices and Operating Integration Solutions: Its sub-topics are related to designing CI• CD pipelines with MuleSoft plugins, automating interactions with Anypoint Platform, designing logging configurations, and identifying Anypoint Monitoring features.

Reliable MuleSoft-Integration-Architect-I Test Preparation & Test MuleSoft-Integration-Architect-I Simulator Free

We pursue the best in the field of MuleSoft-Integration-Architect-I exam dumps. MuleSoft-Integration-Architect-I dumps and answers from our PassLeader site are all created by the IT talents with more than 10-year experience in IT certification. PassLeader will guarantee that you will get MuleSoft-Integration-Architect-I Certification certificate easier than others.

Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q210-Q215):

NEW QUESTION # 210

An organization is evaluating using the CloudHub shared Load Balancer (SLB) vs creating a CloudHub dedicated load balancer (DLB). They are evaluating how this choice affects the various types of certificates used by CloudHub deployed Mule applications, including MuleSoft-provided, customer-provided, or Mule application-provided certificates.

What type of restrictions exist on the types of certificates that can be exposed by the CloudHub Shared Load Balancer (SLB) to external web clients over the public internet?

- A. Only customer-provided wildcard certificates are exposed.
- **B. Only MuleSoft-provided certificates are exposed.**
- C. Only customer-provided self-signed certificates are exposed.
- D. Only underlying Mule application certificates are exposed (pass-through)

Answer: B

Explanation:

<https://docs.mulesoft.com/runtime-manager/dedicated-load-balancer-tutorial>

NEW QUESTION # 211

An organization is struggling frequent plugin version upgrades and external plugin project dependencies. The team wants to minimize the impact on applications by creating best practices that will define a set of default dependencies across all new and in progress projects.

How can these best practices be achieved with the applications having the least amount of responsibility?

- A. Create a Mule plugin project with all the dependencies and add it as a dependency in each application's POM.xml file
- B. Create a mule domain project with all the dependencies define in its POM.xml file and add each application to the domain Project
- **C. Create a parent POM of all the required dependencies and reference each in each application's POM.xml file**
- D. Add all dependencies in each application's POM.xml file

Answer: C

NEW QUESTION # 212

An organization is designing a Mule application to periodically poll an SFTP location for new files containing sales order records and then process those sales orders. Each sales order must be processed exactly once.

To support this requirement, the Mule application must identify and filter duplicate sales orders on the basis of a unique ID contained in each sales order record and then only send the new sales orders to the downstream system.

What is the most idiomatic (used for its intended purpose) Anypoint connector, validator, or scope that can be configured in the Mule application to filter duplicate sales orders on the basis of the unique ID field contained in each sales order record?

- **A. Configure an Idempotent Message Validator component to filter each record by the order ID**
- B. Configure a Database connector to filter and store each record by the order ID
- C. Configure a Cache scope to filter and store each record from the received file by the order ID
- D. Configure a watermark In an On New or Updated File event source to filter unique records by the order ID

Answer: A

NEW QUESTION # 213

An IT integration team followed an API-led connectivity approach to implement an order-fulfillment business process. It created an order processing AP that coordinates stateful interactions with a variety of microservices that validate, create, and fulfill new product orders. Which interaction composition pattern did the integration architect who designed this order processing AP use?

- **A. Orchestration**
- B. Aggregation
- C. Multicasting
- D. Streaming

Answer: A

Explanation:

The interaction composition pattern used by the integration architect for the order processing API that coordinates stateful interactions with various microservices is called orchestration. Orchestration involves managing and coordinating multiple services to achieve a specific business process or workflow. In this case, the order processing API is responsible for validating, creating, and fulfilling new product orders by coordinating interactions with different microservices.

Orchestration provides a centralized control mechanism where the order processing API acts as the orchestrator, handling the sequence of service calls, managing state, and ensuring that the business process is executed correctly.

NEW QUESTION # 214

An organization has deployed both Mule and non-Mule API implementations to integrate its customer and order management systems. All the APIs are available to REST clients on the public internet.

The organization wants to monitor these APIs by running health checks: for example, to determine if an API can properly accept and process requests. The organization does not have subscriptions to any external monitoring tools and also does not want to extend its IT footprint.

What Anypoint Platform feature provides the most idiomatic (used for its intended purpose) way to monitor the availability of both the Mule and the non-Mule API implementations?

- A. Runtime Manager
- B. API Functional Monitoring
- C. API Manager
- **D. Anypoint Visualizer**

Answer: D

Explanation:
