Therefore, make the most of this opportunity of getting these superb exam questions for the ServiceNow Certified System Administrator certification exam. We guarantee you that our top-rated ServiceNow CSA Practice Exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the CSA certification exam on the very first go.

ServiceNow CSA certification exam is designed to test the knowledge and skills of candidates in various areas, including ServiceNow administration, configuration, and maintenance. CSA exam includes 60 multiple-choice questions, and candidates have 90 minutes to complete it. CSA exam is computer-based, and candidates can take it at any authorized testing center or online. To be eligible for the exam, candidates must have at least six months of experience in ServiceNow administration.

Preparing for the ServiceNow CSA exam requires a deep understanding of ServiceNow functionality and best practices. ServiceNow offers a range of training courses and resources to help candidates prepare for the exam, including online courses, instructor-led training, and study guides. It is also recommended that candidates gain hands-on experience with ServiceNow by working on real-world projects or implementing ServiceNow in a test environment. With the right preparation and dedication, passing the ServiceNow CSA Exam can be a valuable asset in advancing an IT career.

ServiceNow CSA exam is designed for professionals who work with ServiceNow on a regular basis, including system administrators, implementation specialists, developers, and consultants. CSA exam is an industry-recognized certification that can help individuals advance their careers and increase their earning potential. It is also a requirement for certain ServiceNow partner programs.

CSA Test King - CSA Reliable Test Duration

Revision of your CSA exam learning is as essential as the preparation. For that purpose, CSA exam dumps contains specially

created real exam like practice questions and answers. They are in fact meant to provide you the opportunity to revise your learning and overcome your CSA Exam fear by repeating the practice tests as many times as you can. Preparation for CSA exam using our CSA exam materials are sure to help you obtain your targeted percentage too.

ServiceNow Certified System Administrator Sample Questions (Q222-Q227):

NEW QUESTION # 222

Which ServiceNow utility gives a Service Desk agent the ability to trace from a Service having an issue, to see which CIs supporting that service have active issues?

- A. CI Health Dashboard
- **B. Dependency View**
- C. AL Service Dashboard
- D. Event Management Homepage

Answer: B

Explanation:

In ServiceNow, the Dependency View is a graphical representation that allows Service Desk agents and IT teams to trace relationships between Configuration Items (CIs) and identify which CIs are experiencing issues that may be affecting a business service.

Why is "Dependency View" the Correct Answer?

Visualizes Relationships Between CIs and Services

Dependency View displays CIs and their dependencies in an interactive map.

Service Desk agents can quickly see which CIs are impacted and how they affect the business service.

Identifies Impacted Configuration Items (CIs)

If a server, database, or network component is down, Dependency View helps trace which business service is affected.

This is useful for incident management, root cause analysis, and change impact assessment.

Integrated with CMDB (Configuration Management Database)

Dependency Views pull data from the CMDB to map CI relationships.

This helps Service Desk agents identify problems quickly without needing deep technical knowledge.

Incorrect Answer Choices Analysis:

A . AI Service Dashboard

☐ Incorrect - There is no standard "AI Service Dashboard" in ServiceNow.

B . CI Health Dashboard

☐ Incorrect - The CI Health Dashboard focuses on the overall health of CIs (e.g., compliance, correctness, completeness) but does not provide a dependency map for tracing service issues.

D . Event Management Homepage

☐ Incorrect - Event Management (ITOM) is used for monitoring events and alerts, but it does not provide an interactive dependency view for tracing service issues.

Official ServiceNow Documentation Reference:

ServiceNow Docs - Dependency Views

☐ Understanding Dependency Views

ServiceNow Docs - CMDB Relationship Visualization

☐ Using CMDB Relationships

Conclusion:

The correct answer is:

☐ C. Dependency View

Dependency View allows Service Desk agents to trace service issues back to the affected CIs, making it an essential tool for incident management and root cause analysis.

NEW QUESTION # 223

Which component of a table contains a piece of data for one record?

- A. Datapoint
- B. Item
- **C. Field**
- D. Element
- E. Factor

Answer: C

NEW QUESTION # 224

What are the three key tables in an enterprise CMDB? Choose 3 answers.

- **A. omdb_ci**
- B. sn_emdb_bak
- **C. Ey omdb**
- D. sn_emdb_ci
- E. sn_emdb
- **F. omadb_rel_ci**
- G. emdb_bak

Answer: A,C,F

Explanation:

The Configuration Management Database (CMDB) in ServiceNow stores information about configuration items (CIs) and their relationships.

The Three Key CMDB Tables:

cmdb (Configuration Management Database)

☐ The main parent table for all CMDB-related data.

Stores core configuration item (CI) data.

Other CMDB-related tables inherit from this table.

cmdb_ci (Configuration Items Table)

☐ Stores individual configuration items (CIs).

Every CI (e.g., servers, network devices, software) is stored in this table or one of its child tables.

This table extends cmdb.

cmdb_rel_ci (CI Relationships Table)

☐ Stores relationships between CIs.

Defines how CIs connect to each other (e.g., "server hosts application").

Helps with Service Mapping and Impact Analysis.

Incorrect Answer Choices Analysis:

A . omadb_rel_ci

☐ Incorrect - Not a standard ServiceNow CMDB table.

B . sn_emdb

☐ Incorrect - sn_emdb is not a CMDB table in ServiceNow.

C . sn_emdb_ci

☐ Incorrect - No such table in ServiceNow CMDB architecture.

E . sn_emdb_bak

☐ Incorrect - No such backup table in ServiceNow CMDB.

G . emdb_bak

☐ Incorrect - No such ServiceNow CMDB table exists.

Official ServiceNow Documentation Reference:

NEW QUESTION # 225

What is a Record Producer?

- A. A Record Producer is a type of Catalog Item that provides easy ordering by bundling requests
- B. A Record Producer is a type of Catalog Item that is used for Requests, not Services
- **C. A Record Producer is a type of a Catalog Item that allows users to create task-based records from the Service Catalog**
- D. A Record Producer creates user records

Answer: C

Explanation:

A Record Producer in ServiceNow is a type of Catalog Item that allows users to create records in tables (such as Incidents, Change Requests, or HR Cases) from the Service Catalog. It provides a simplified and user-friendly interface for users to submit structured data without needing direct access to the actual form or database tables.

Key Features of a Record Producer:

- #Creates task-based records in the appropriate table (e.g., incident, sc_task, problem).

- #Uses a simplified form instead of the standard form view of a record.

- #Can trigger workflows and business rules when submitted.

- #Maps user inputs to table fields via Variable Mappings.

An employee wants to report a broken laptop but does not need to see the full Incident form.

The IT team creates a Record Producer named "Report an IT Issue" in the Service Catalog.

The Record Producer collects user input (e.g., issue description, urgency, contact information).

Upon submission, it creates an Incident record (incident table) in ServiceNow.

Example Use Case:

Why the Correct Answer is D: D. A Record Producer is a type of a Catalog Item that allows users to create task-based records from the Service Catalog (Correct). This is the most accurate description of a Record Producer.

It allows users to create records in a specified task table (Incident, Change, Request, etc.) through the Service Catalog.

Why the Other Options Are Incorrect: A. A Record Producer is a type of Catalog Item that is used for Requests, not Services (Incorrect). Record Producers are not limited to Requests.

They can create various types of records, including Incidents, Change Requests, and HR Cases.

B: A Record Producer creates user records (Incorrect)

A Record Producer does not create user records (users are managed in the sys_user table).

Instead, it creates task-based records in other tables like incident or sc_task.

C: A Record Producer is a type of Catalog Item that provides easy ordering by bundling requests (Incorrect). Order Guides, not Record Producers, handle bundling multiple Catalog Items into a single request.

A Record Producer creates a single record in a defined table.

Comparison: Record Producer vs. Other Catalog Items

	Record Producer	Standard Catalog Item	Order Guide
Creates a record in a ServiceNow table	Yes	No	No
Used to order physical/digital goods	No	Yes	Yes
Can bundle multiple requests	No	No	Yes
Uses a form-based submission	Yes	Yes	Yes

NEW QUESTION # 226

What is the purpose of flagging an article in a knowledge base?

- A. Allow a user to submit feedback about an article
- B. To mark an article to read later.
- C. Reporting an error

Answer: C

Explanation:

In ServiceNow Knowledge Management, flagging an article is a feature that allows users to report errors or issues within a knowledge article. This helps maintain article accuracy and ensures that outdated or incorrect information is addressed by knowledge managers.

Users can flag an article if they find incorrect, outdated, or misleading information. Knowledge managers receive a notification about flagged articles and can review them for updates.

Helps improve knowledge base content by allowing users to point out inaccuracies. Ensures that knowledge articles remain relevant and useful.

Flagged articles appear in the Knowledge Base Administration module, allowing managers to track and resolve flagged issues.

Incorrect: There is no built-in "read later" feature in ServiceNow Knowledge Management.

B: Allow a user to submit feedback about an article

Feedback is submitted through the Feedback feature, which allows users to rate articles and provide comments.

Key Purposes of Flagging an Article: Why Other Options Are Incorrect?

Flagging an Article for Review

Knowledge Management Administration
