NEW QUESTION # 19

Which query will hunt for only incoming traffic from 99.99.99.99 when all log sources have been mapped to XDM?

- A. datamodel dataset = * filter XDM.ALIAS.ipv4 = "99.99.99.99"
- B. datamodel preset = * | filter XDM.ALIAS.ip = "99.99.99.99"
- **C. datamodel dataset = * | fields fieldset.xdm_network | filter xdm.source.ipv4 = "99.99.99.99"**
- D. preset = network_story | filter agent_ip_addresses = "99.99.99.99"

Answer: C

Explanation:

The correct answer is C. This query correctly filters only the incoming traffic from the specific IP address "99.99.99.99":

* datamodel dataset = * sets the scope to all XDM-mapped datasets.

* fields fieldset.xdm_network explicitly limits the results to network events.

* filter xdm.source.ipv4 = "99.99.99.99" specifically targets traffic coming from (incoming) this source IP.

This query adheres to XDM standard data modeling and accurately captures incoming traffic from the specified IP address.

Other provided queries either incorrectly specify fields, presets, or filtering methods.

Therefore, Option C is the verified, accurate query.
