

Complete EX380 Exam Dumps | EX380 Valid Exam Duration

By focusing on how to help you more effectively, we encourage exam candidates to buy our EX380 study braindumps with high passing rate up to 98 to 100 percent all these years. Our experts designed three versions for you rather than simply congregate points of questions into EX380 Real Questions. Efforts conducted in an effort to relieve you of any losses or stress. So our activities are not just about profitable transactions to occur but enable exam candidates win this exam with the least time and get the most useful contents.

Our company in the field of the EX380 exam bootcamp for years, we also enjoy high reputation in the business. You choose us, we will give you the best we have, and your right choice will also bring the benefits to you. With the high reputation in the field, we can guarantee the quality of the EX380 Exam Dumps. It also contains the free update for one year for you. It can save your money for updating, and the update version will send to your mailbox automatically.

Pass Guaranteed Quiz EX380 - Red Hat Certified Specialist in OpenShift Automation and Integration Fantastic Complete Exam Dumps

Are you still hesitating about how to choose excellent EX380 exam simulations? Our company ExamTorrent is engaged in studying valid exam simulation files with high passing rate many years. If you want to find valid EX380 exam simulations, our products are helpful for you. Stop hesitating, good choice will avoid making detours in the preparing for the real test. Our EX380 Exam Simulations will assist you clear exams and apply for international companies or better jobs with better benefits in the near future. Go and come to us!

RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q21-Q26):

NEW QUESTION # 21

Logging Configuration - Configure ClusterLogging in Web Console

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Log in to the OpenShift web console.

This Task is explicitly defined as a GUI workflow.

Step 2: Navigate to Operators .

Installed logging components are managed through the operator framework.

Step 3: Open Installed Operators .

This lists operators already deployed in the cluster.

Step 4: Select Red Hat OpenShift Logging .

This operator manages the cluster logging stack and its custom resources.

Step 5: Open the ClusterLogging instance.

The Task SIMULATION refers to editing the existing ClusterLogging custom resource.

Step 6: Switch to YAML View .

This allows direct editing of the logging custom resource specification.

Step 7: Edit the collection type and set it to vector.

This changes the log collector implementation.

Step 8: Click Save .

The operator will reconcile the resource and apply the updated collector configuration.

Detailed explanation:

The ClusterLogging custom resource controls the logging stack behavior in OpenShift. Changing the collection type to vector updates which collector technology is used for gathering node and container logs. In operator-managed platforms, direct YAML edits to the custom resource are the preferred method for changing managed behavior because the operator then applies and maintains the desired state. This Task tests both navigation skills in the web console and knowledge of where logging behavior is configured. Saving the resource triggers reconciliation, which is a core OpenShift operator pattern: the declared configuration is read and enforced by the operator rather than by manual per-pod changes.

NEW QUESTION # 22

Configure RBAC roles with users and groups

Task Information : Grant edit to group dev-team in namespace payments, and grant view to user auditor1.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create (or switch to) the project
- * oc new-project payments
- * Namespace must exist before applying rolebindings.
- * Grant edit to the group
- * oc -n payments policy add-role-to-group edit dev-team
- * Members of dev-team can modify most resources in payments.
- * Grant view to a user
- * oc -n payments policy add-role-to-user view auditor1
- * auditor1 can read resources but not change them.
- * Verify rolebindings
- * oc -n payments get rolebinding

NEW QUESTION # 23

Integrate OpenShift with LDAP (create LDAP identity provider)

Task Information : Configure cluster OAuth to add an LDAP identity provider using an existing bind secret and CA ConfigMap , then verify login works.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Verify prerequisites exist (Secret + ConfigMap)
- * oc -n openshift-config get secret rhds-ldap-secret
- * oc -n openshift-config get configmap rhds-ca-config-map
- * OAuth LDAP configuration references these objects. If they don't exist, OAuth won't be able to bind to LDAP securely.
- * Edit the cluster OAuth resource
- * oc edit oauth cluster
- * The oauth/cluster resource is where identity providers are defined.
- * Add an LDAP identity provider entry (example structure) Add under spec.identityProviders:
- * - name: corp-ldap
- * mappingMethod: claim

- * type: LDAP
- * ldap:
- * url: "ldaps://ldap.example.com:636/ou=People,dc=example,dc=com?uid"
- * bindDN: "uid=openshift,ou=svc,dc=example,dc=com"
- * bindPassword:
- * name: rhds-ldap-secret
- * ca:
- * name: rhds-ca-config-map
- * insecure: false
- * attributes:
- * id: ["dn"]
- * name: ["cn"]
- * preferredUsername: ["uid"]
- * email: ["mail"]
- * url: where to search for users and which attribute is used for login (here uid).
- * bindDN + bindPassword: service account used for LDAP queries.
- * ca: trusts the LDAP server CA for TLS.
- * attributes: maps LDAP data into OpenShift user identity fields.
- * Restart OAuth pods to load changes quickly
- * oc -n openshift-authentication delete pod -l app=oauth-openshift
- * This forces pods to restart and re-read the updated configuration.
- * Verify the identity provider appears and users can log in
- * In the web console login page, you should see the new provider (name may show as corp-ldap).
- * After a successful login, confirm user objects appear:
- * oc get users
- * oc get identities
- * OpenShift creates User and Identity objects upon first successful authentication.

NEW QUESTION # 24

Create and use client certificates with kubeconfig (CSR flow)

Task Information : Generate a client key/CSR for audit2, approve it, extract the signed cert, and build a kubeconfig using that cert.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Generate private key and CSR
- * openssl genrsa -out audit2.key 2048
- * openssl req -new -key audit2.key -out audit2.csr -subj "/CN=audit2/O=auditors"
- * CN becomes username; O can map to groups in some setups.
- * Base64 encode CSR for the API object
- * CSR=\$(base64 -w0 audit2.csr)
- * Kubernetes CSR object expects base64-encoded request data.
- * Create the CSR object
- * cat << EOF | oc apply -f-
- * apiVersion: certificates.k8s.io/v1
- * kind: CertificateSigningRequest
- * metadata:
- * name: audit2-csr
- * spec:
- * request: \${CSR}
- * signerName: kubernetes.io/kube-apiserver-client
- * usages:
- * - client auth
- * EOF
- * Approve the CSR
- * oc adm certificate approve audit2-csr
- * Approval triggers certificate issuance.
- * Extract the signed certificate

```

* oc get csr audit2-csr -o jsonpath='{.status.certificate}' | base64 -d > audit2.crt
* Produces the client certificate file.
* Build kubeconfig using cert/key
* oc config set-credentials audit2 \
* --client-certificate=audit2.crt --client-key=audit2.key \
* --embed-certs=true --kubeconfig=audit2.kubeconfig
* oc config set-cluster lab \
* --server="$(oc whoami --show-server)" \
* --insecure-skip-tls-verify=true \
* --kubeconfig=audit2.kubeconfig
* oc config set-context audit2 \
* --cluster=lab --user=audit2 --namespace=default \
* --kubeconfig=audit2.kubeconfig
* Creates a kubeconfig that authenticates using client certificates.
* Test
* oc --kubeconfig=audit2.kubeconfig get ns

```

NEW QUESTION # 25

GitOps and MachineConfig - Trigger Argo CD Synchronization by Repository Update

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Confirm that the repository being pushed to is the same repository watched by the GitOps/Argo CD application.

This linkage is essential because GitOps acts only on configured source repositories and paths.

Step 2: Commit the MachineConfig changes.

The lab uses:

```
git commit -am "Add MachineConfig for motd"
```

Step 3: Push the changes to the tracked branch.

The lab uses:

```
git push origin main
```

Step 4: Allow Argo CD to detect the repository change and begin synchronization.

In a standard GitOps model, the controller compares the Git repository to the cluster state and applies drift correction or new desired resources.

Detailed explanation:

This sub Task SIMULATION is the operational purpose behind the previous Git command Task SIMULATION . The point is not merely to store a file in Git; it is to update the declarative source that Argo CD uses to reconcile the cluster. Once the repository is updated, Argo CD detects the new commit and syncs the MachineConfig into the cluster according to its application definition. This demonstrates a core automation principle in OpenShift GitOps: administrators do not treat the cluster as the primary editable surface. Instead, they modify Git and let the automation layer enforce state. That provides traceability, peer review potential, rollback capability, and consistency across environments.

NEW QUESTION # 26

.....

Our EX380 Test Torrent keep a look out for new ways to help you approach challenges and succeed in passing the Red Hat Certified Specialist in OpenShift Automation and Integration exam. To be recognized as the leading international exam bank in the world through our excellent performance, our Red Hat Certified Specialist in OpenShift Automation and Integration qualification test are being concentrated on for a long time and have accumulated mass resources and experience in designing study materials. There is considerable skilled and motivated stuff to help you obtain the Red Hat Certified Specialist in OpenShift Automation and Integration exam certificate. We sincerely wish you trust and choose us wholeheartedly.

EX380 Valid Exam Duration: <https://www.examtorent.com/EX380-valid-vce-dumps.html>

After getting to know the respective features of the three versions of EX380 actual collection: Red Hat Certified Specialist in OpenShift Automation and Integration, you can choose on your own, Besides, we check the updating of EX380 exam prep guide

every day to make sure you pass EX380 valid test easily, Furthermore, the RedHat EX380 PDF is printable which enables you to study or revise questions on the go, Any ExamTorrent EX380 Valid Exam Duration user who fails the corresponding exam has 30 days from the date of purchase of Exam on ExamTorrent EX380 Valid Exam Duration for a full refund.

Changing the `DiskDriveInfo` class and the New EX380 Test Labs test code to use the `ShareVector` implementation produces the correct results, This app has restaurant data for most North EX380 American cities, as well as cities in the United Kingdom and a few other countries.

RedHat Complete EX380 Exam Dumps Exam 100% Pass | EX380: Red Hat Certified Specialist in OpenShift Automation and Integration

After getting to know the respective features of the three versions of EX380 actual collection: Red Hat Certified Specialist in OpenShift Automation and Integration, you can choose on your own, Besides, we check the updating of EX380 exam prep guide every day to make sure you pass EX380 valid test easily.

Furthermore, the RedHat EX380 PDF is printable which enables you to study or revise questions on the go, Any ExamTorrent user who fails the corresponding exam EX380 Latest Test Experience has 30 days from the date of purchase of Exam on ExamTorrent for a full refund.

After purchasing our RedHat EX380 practice materials, the free updates will be sent to your mailbox for one year long if our experts make any of our RedHat EX380 guide materials.
