NEW QUESTION # 82

A Salesforce developer is hired by a multi-national company to build a custom Lightning application that shows employees their employment benefits and earned commissions over time. The application must acknowledge and respect the user's locale context for dates, times, numbers, currency, and currency symbols.

When using Aura components, which approach should the developer implement to ensure the Lightning application complies with the user's locale?

- A. Use the \$Label global value provider.
- B. Create a Hierarchical custom setting to store user preferences.
- C. Use the \$Locale value provider to retrieve the user preferences.
- D. Use the \$User global variable to retrieve the user preferences.

Answer: C

Explanation:

The \$Locale value provider should be used to ensure the Lightning application respects the user's locale for dates, times, numbers, currency, and currency symbols. This global value provider gives components access to locale formats and labels, which are automatically rendered according to the user's locale settings. References:
