

# Where To Find Real Microsoft AZ-104 Exam Questions

## AZ 104 Exam Questions with 100% Correct Answers

You need to define a custom domain name for Azure AD to support the planned infrastructure. Which domain name should you use?

- A. ad.humongousinsurance.com
- B. humongousinsurance.onmicrosoft.com
- C. humongousinsurance.local
- D. humongousinsurance.com >>> **Answer: D**

Every Azure AD directory comes with an initial domain name in the form of `domainname.onmicrosoft.com`.

The initial domain name cannot be changed or deleted, but you can add your corporate domain name to AAD as well. Adding custom domain names to Azure AD allows you to assign user names in the directory that are familiar to your users, such as `'alice@contoso.com'` instead of `'alice@domain.name.onmicrosoft.com'`.

You need to prepare the environment to meet the authentication requirements. Which two actions should you perform? Each correct answer presents part of the solution.  
NOTE: Each correct selection is worth one point.

- A. Allow inbound TCP port 8080 to the domain controllers in the Miami office.
- B. Add `http://autogon.microsoftazuread-sso.com` to the intranet zone of each client computer in the Miami office.

- C. Join the client computers in the Miami office to Azure AD.

- D. Install the Active Directory Federation Services (AD FS) role on a domain controller in the Miami Questions & Answers PDF P-16 [www.dumpskey.com](http://www.dumpskey.com) office.

- E. Install Azure AD Connect on a server in the Miami office and enable Pass-through Authentication. >>> **Answer: BE**

B: You can gradually roll out Seamless SSO to your users. You start by adding the following Azure AD URL to all or selected users' Intranet zone settings by using Group Policy in Active Directory: <https://autogon.microsoftazuread-sso.com>

E: Seamless SSO works with any method of cloud authentication - Password Hash Synchronization or Pass-through Authentication, and can be enabled via Azure AD Connect.

Scenario: Licensing Issue

1. You attempt to assign a license in Azure to several users and receive the following error message: "Licenses not assigned. License agreement failed for one user."

## Features of Microsoft AZ-104 Web-Based Practice Exam

The client only needs 20-30 hours to learn our AZ-104 learning questions and then they can attend the test. Most people may devote their main energy and time to their jobs, learning or other important things and can't spare much time to prepare for the test. But if clients buy our AZ-104 Training Materials they can not only do their jobs or learning well but also pass the test smoothly and easily because they only need to spare little time to learn and prepare for the AZ-104 test.

Microsoft AZ-104 certification is highly regarded by employers as it demonstrates that the holder has the skills and knowledge required to manage Azure environments effectively. Microsoft Azure Administrator certification is also a valuable asset for

professionals who want to advance their careers in cloud computing. Professionals who hold the AZ-104 Certification are highly sought after by organizations looking to hire Azure administrators.

## Microsoft Azure Administrator Sample Questions (Q380-Q385):

### NEW QUESTION # 380

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure virtual machine named VM1. VM1 was deployed by using a custom Azure Resource Manager template named ARM1.json.

You receive a notification that VM1 will be affected by maintenance.

You need to move VM1 to a different host immediately.

Solution: From the Overview blade, you move the virtual machine to a different resource group.

Does this meet the goal?

- A. No
- B. Yes

### Answer: A

Explanation:

Explanation

Moving the virtual machine to a different resource group does not change the host that the virtual machine runs on. It only changes the logical grouping of the resources. To move the virtual machine to a different host, you need to redeploy it or use Azure Site Recovery. Then, References: [Move resources to new resource group or subscription] [Redeploy Windows VM to new Azure node] [Use Azure Site Recovery to migrate Azure VMs between Azure regions]

### NEW QUESTION # 381

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure virtual machine named VM1. VM1 was deployed by using a custom Azure Resource Manager template named ARM1.json.

You receive a notification that VM1 will be affected by maintenance.

You need to move VM1 to a different host immediately.

Solution: From the Update management blade, you click enable.

Does this meet the goal?

- A. No
- B. Yes

### Answer: A

Explanation:

You would need to Redeploy the VM.

References: <https://docs.microsoft.com/en-us/azure/virtual-machines/windows/redeploy-to-new-node>

### NEW QUESTION # 382

You have an Azure subscription that contains the resources in the following table.

Name	Type
VMRG	Resource group
VNet1	Virtual network
VNet2	Virtual network
VM5	Virtual machine connected to VNet1
VM6	Virtual machine connected to VNet2

In Azure, you create a private DNS zone named adatum.com, add virtual network link to VNet2, and enable auto registration. The adatum.com zone is configured as shown in the following exhibit.

Resource group (change)  
vmrg

Subscription (change)  
Azure Pass

Subscription ID  
a4fde29b-d56a-4f6c-8298-6c53cd0b720c

Name server 1  
-

Name server 2

Search record sets

NAME	TYPE	TTL	VALUE
@	SOA	3600	Email: azuredns-hostmaster.microsoft.com Host: internal.cloudapp.net Refresh: 3600 Retry: 300 Expire: 2419200 Minimum TTL: 300 Serial number: 1
vm1	A	3600	10.1.0.4
vm9	A	3600	10.1.0.12

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point

Answer Area

Statements	Yes	No
The A record for VM5 will be registered automatically in the adatum.com zone.	<input type="radio"/>	<input type="radio"/>
VM5 can resolve VM9.adatum.com.	<input type="radio"/>	<input type="radio"/>
VM6 can resolve VM9.adatum.com.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area

Statements	Yes	No
The A record for VM5 will be registered automatically in the adatum.com zone.	<input type="radio"/>	<input type="radio"/>
VM5 can resolve VM9.adatum.com.	<input type="radio"/>	<input type="radio"/>
VM6 can resolve VM9.adatum.com.	<input type="radio"/>	<input type="radio"/>

Explanation:

Answer Area

Statements	Yes	No
The A record for VM5 will be registered automatically in the adatum.com zone.	<input type="radio"/>	<input checked="" type="radio"/>
VM5 can resolve VM9.adatum.com.	<input type="radio"/>	<input checked="" type="radio"/>
VM6 can resolve VM9.adatum.com.	<input checked="" type="radio"/>	<input type="radio"/>

### NEW QUESTION # 383

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure virtual machine named VM1 that runs Windows Server 2016.

You need to create an alert in Azure when more than two error events are logged to the System event log on VM1 within an hour.

Solution: You create an Azure Log Analytics workspace and configure the data settings. You add the Microsoft Monitoring Agent VM extension to VM1. You create an alert in Azure Monitor and specify the Log Analytics workspace as the source.

Does this meet the goal?

- A. No
- B. Yes

#### Answer: A

Explanation:

You add the Microsoft Monitoring Agent VM extension to VM1 > This is WRONG You Install the Microsoft Monitoring Agent VM agent to VM1 > This is Correct

1. Log analytics agent - Install in VM.
2. Log analytics workspace - collect the log files from Log Analytics Agent.
3. Azure Monitor - Create alert based on logs read from Log Analytics Workspace.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/platform/agents-overview>

### NEW QUESTION # 384

You have an Azure subscription that contains a storage account named storage1. The storage1 account contains a container named container1.

You to create a lifecycle management rule for storage' that will automatically move the blobs in container' to the lowest-cost tier after 90 days.

How should you complete the rule? TO answer, select the appropriate options in the answer are a.

NOTE: Each correct selection is worth one point.

```
"rules": [
  {
    "enabled": true,
    "name": "rule1",
    "type": "Lifecycle",
    "definition": {
      "actions": {
        "baseBlob": {
          "enableAutoTierToHotFromCool": {
            "tierToArchive": [
              "tierToCool": [
                "daysAfterModificationGreaterThan": 90
              ...
            ]
          }
        }
      }
    }
  }
]
```
