1Y0-204 Exam Guide Materials & 1Y0-204 Accurate Prep Material

No matter when you need help on our 1Y0-204 training questions, the after-sale service staffs in our company share a passion for you, an intense focus on teamwork, speed and agility, and a commitment to trust and respect for all individuals. At present, our company is a leading global provider of 1Y0-204 Preparation exam in the international market. And as you know, the first-class quality comes with the first-class service. So you will find our 1Y0-204 is the best in every detail!

The Citrix 1Y0-204 Exam covers a range of topics, including installing and configuring Citrix Virtual Apps and Desktops 7, managing and monitoring the environment, administering Citrix policies, and troubleshooting common issues. Candidates will also need to demonstrate their knowledge of advanced topics, such as implementing high availability and disaster recovery, managing user profiles, and integrating Citrix Virtual Apps and Desktops 7 with other Citrix technologies.

Citrix Virtual Apps and Desktops 7 Administration Sample Questions (Q16-Q21):

NEW QUESTION # 16

Scenario: A Citrix Administrator has been advised that additional Windows users will need to access the on-premises Citrix Virtual Apps and Desktops Site. The Site utilizes Citrix Profile Management for all users.

The new users have been using Windows Roaming Profiles and will need their existing profile information when they use the Citrix Site. The administrator enables the Profile Management policy setting for 'Enable Migration of Existing Profiles'.

At which stage will the new users' Roaming Profiles be migrated to the existing Profile Management store?

- A. When the new users initiate their first logon to a Virtual Delivery Agent (VDA) machine
- B. When the new users initiate their first domain authentication
- C. When the new policy is updated automatically in Active Directory after 90 minutes
- D. When the Virtual Delivery Agent (VDA) machines configured with the new policy are restarted

Answer: C

NEW QUESTION # 17

Scenario: A Citrix Administrator needs to configure StoreFront to allow external users access to internal resources. The external users will authenticate on StoreFront.

Which StoreFront authentication method can the administrator configure?

- A. HTTP Basic
- B. Smart card
- C. Username and password
- D. Pass-through from NetScaler Gateway

Answer: D

Explanation:

Pass-through from NetScaler Gateway is the authentication method that allows external users to access internal resources through StoreFront without having to enter their credentials again. This method requires that users authenticate on NetScaler Gateway, which then passes the user identity to StoreFront. This option is only available if it has been enabled for the store.

NEW QUESTION # 18

Scenario: A Citrix Administrator suspects an attack on a load balancing virtual server. The administrator needs to restrict access to the load balancing virtual server (192.168.100.25) for 10 minutes.

Which Access Control List (ACL) will help to accomplish this requirement?

- A. `add ns acl rule1 DENY -destIP 192.168.100.25 -TTL 600`
- B. `add simpleacl rule1 DENY -srcIP 192.168.100.25-TTL 600`
- C. `add simpleacl rule1 DENY -srcIP 192.168.100.25 -TTL 600000`
- D. `add ns acl rule1 DENY -destIP 192.168.100.25 -TTL 600000`

Answer: A

Explanation:

The correct syntax for adding a simple ACL rule is:

```
add simpleacl <aclname> <ALLOW | DENY> -srcIP <IPAddress> [-destIP <IPAddress>] [-TTL <timeInSeconds>]
```

The correct syntax for adding an extended ACL rule is:

```
add ns acl <aclname> <ALLOW | DENY> -srcIP <IPAddress> [-destIP <IPAddress>] [-TTL <timeInSeconds>]
```

Therefore, the correct answer is A, because it uses the extended ACL rule format and specifies the destination IP address of the

load balancing virtual server (192.168.100.25) and the TTL value of 10 minutes (600 seconds).

NEW QUESTION # 19

Scenario: A Citrix Administrator will use PowerShell to configure a new restart schedule for the Windows 2016 Server OS group named "Win2016-ServerOS" within a Citrix Virtual Desktops infrastructure.

The administrator needs the machines in the Server OS group to restart at a time when no users will be accessing them: beginning at 23:00h (11:00 PM) each day, with 30-minute intervals between each machine restart.

Which PowerShell command should the administrator use?

- A. `New-BrokerRebootSchedule -Name XYZ-ServerOS-DailyReboot -DesktopGroupName Win2016- ServerOS - Frequency Daily -StartTime "11:00" -Enabled $true - RebootDuration 30`
- B. `Set-BrokerRebootScheduleV2 -Name XYZ-ServerOS-DailyReboot -DesktopGroupName Win2016- ServerOS - Frequency Daily -StartTime "11:00" -Enabled $true - RebootDuration 30`
- C. `Set-BrokerRebootSchedule -Name XYZ-ServerOS-DailyReboot -DesktopGroupName Win2016- ServerOS - Frequency Daily -StartTime "23:00" -Enabled $true - RebootDuration 30`
- D. `New-BrokerRebootScheduleV2 -Name XYZ-ServerOS-DailyReboot -DesktopGroupName Win2016- ServerOS - Frequency Daily -StartTime "23:00" -Enabled $true - RebootDuration 30`

Answer: D

Explanation:

The `New-BrokerRebootScheduleV2` cmdlet creates a new reboot schedule for a machine catalog or a delivery group. The `-StartTime` parameter specifies the start time of the reboot schedule in

24-hour format. The `-RebootDuration` parameter specifies the time interval in minutes between each machine reboot. The `-Frequency` parameter specifies how often the reboot schedule occurs.

The `-DesktopGroupName` parameter specifies the name of the delivery group to apply the reboot schedule to. The `-Enabled` parameter specifies whether the reboot schedule is enabled or not.

NEW QUESTION # 20

Which scenario will cause automatic high availability (HA) synchronization to fail?

- A. A configuration change to the primary Citrix ADC
- B. Different build versions
- C. A force failover
- D. Manually forced synchronization

Answer: B

Explanation:

Automatic HA synchronization will fail if the primary and secondary Citrix ADCs have different build versions. The build versions must be the same for the configuration to be synchronized. A manual synchronization, a configuration change to the primary Citrix ADC, or a force failover will not affect the automatic HA synchronization.

NEW QUESTION # 21

.....

Services like quick downloading within five minutes, convenient and safe payment channels made for your convenience. Even newbies will be tricky about this process. Unlike product from stores, quick browse of our 1Y0-204 practice materials can give you the professional impression wholly. So, they are both efficient in practicing and downloading process. By the way, we also have free demo as freebies for your reference to make your purchase more effective.
