Test4Sure is a very good website to provide a convenient service for the Salesforce certification Plat-Admn-201 exam. Test4Sure's products can help people whose IT knowledge is not comprehensive pass the difficulty Salesforce certification Plat-Admn-201 exam. If you add the Salesforce Certification Plat-Admn-201 Exam product of Test4Sure to your cart, you will save a lot of time and effort. Test4Sure's product is developed by Test4Sure's experts' study of Salesforce certification Plat-Admn-201 exam, and it is a high quality product.

Salesforce Certified Platform Administrator Sample Questions (Q23-Q28):

NEW QUESTION # 23

A Platform Administrator at Cloud Kicks received a request from the head of sales operations to create a process in which opportunities must be validated by specific team leaders based on a mix of criteria. When the administrator analysed the list of criteria, they found that there were 30 potential sets of criteria that would identify the proper person to route the request to. How should the administrator fulfill this request?

- A. Create a button on the opportunity that brings up an email template to send to the correct leader.
- B. **Create an approval process with specific entry criteria and approval steps for each of the sets of criteria specified.**
- C. Use a screen flow to allow the seller to input the criteria in a form that is then sent to the appropriate leader.
- D. Create a record triggered flow orchestration to properly route the requests.

Answer: B

Explanation:

While modern tools like Flow Orchestration exist, the standard and most robust way to handle complex, criteria-based routing for record sign-offs is an Approval Process. An approval process can handle many different "Approval Steps," and each step can have its own "Step Entry Criteria." For instance, Step 1 could route to Leader A if the region is "North," while Step 2 routes to Leader B if the region is "South" and the discount is >20%. With 30 potential sets of criteria, the administrator can build a comprehensive process that automatically identifies the correct approver without user intervention. Using an email button (Option A) or a manual form (Option D) is prone to human error, as the salesperson might select the wrong leader. A record-triggered flow (Option C) can launch an approval process, but the complex multi-step routing logic is best managed within the Approval engine itself to maintain a clear audit trail of who approved what and why.

NEW QUESTION # 24

Northern Trail Outfitters has the Case object set to private. The support manager raised a concern that reps have a broader view of data than expected and can see all cases on their group's dashboards. What is causing reps to have inappropriate access to data on dashboards?

- A. Dashboard Subscriptions
- B. **Dashboard's running user**
- C. Public Dashboards
- D. Dashboard Filters

Answer: B

Explanation:

In Salesforce, a dashboard's running user determines which data is displayed to anyone viewing the dashboard. If a dashboard is configured with a "Static" running user (e.g., a Support Manager who has "View All" permissions), every user who views that dashboard will see the manager's level of data, regardless of their own personal sharing permissions. This bypasses the Organization-Wide Default (OWD) of "Private" for the Case object. When the support manager observes that reps can see all cases on a group dashboard, it is almost certainly because the dashboard is "running" as a user with high-level access. To correct this and ensure users only see data they are entitled to, the Platform Administrator should convert it into a Dynamic Dashboard. A dynamic dashboard is set to "Run as the logged-in user," meaning the data reflected in the components will automatically filter based on the individual viewer's specific sharing rules and record ownership. This ensures that the dashboard remains a useful tool for the team while strictly adhering to the company's data privacy and security requirements.

NEW QUESTION # 25

Universal Containers' Platform Administrator has been asked to create a many-to-many relationship between two existing custom objects. Which two steps should the administrator take when enabling the many-to-many relationship?

- A. Create two lookup relationships on the new object.
- B. Create URL fields on a custom object.
- C. Create two master-detail relationships on the new object.
- D. Create a junction with a custom object.

Answer: C,D

Explanation:

In Salesforce, a many-to-many relationship allows each record of one object to be linked to multiple records of another object and vice versa. This is achieved by using a Junction Object. A junction object is a custom object that sits between the two objects you want to relate. To implement this correctly, the administrator must follow two specific steps: first, create the custom object to serve as the "junction"; second, create two Master-Detail relationship fields on that new junction object. One master-detail field points to the first custom object, and the second points to the other. Because these are master-detail relationships, the junction record's visibility and deletion behavior are controlled by its parents. This structure allows for powerful reporting and roll-up summaries on both parent objects. Using simple lookup relationships (Option D) would not enforce the strict data integrity or the specific roll-up capabilities that define a true many-to-many relationship in the Salesforce architecture.

NEW QUESTION # 26

Cloud Kicks (CK) has a new Platform Administrator who is asked to put together a memo detailing Salesforce usage to budget for upcoming license purchases. Where should the administrator go to find out what type of licenses CK has purchased and how many are available?

- A. User management settings in setup
- B. User licenses related list in company information
- C. Usage-based entitlements related list in company information
- D. Search for licenses types in setup

Answer: B

Explanation:

The Company Information page in the Setup menu is the "source of truth" for an organization's high-level metadata and licensing. In the User Licenses related list on this page, the administrator can see every license type purchased (e.g., Salesforce, Salesforce Platform, Force.com), the total number of seats allocated, the number of seats currently in use, and the number of remaining available licenses. This is the first place an administrator should look for budgeting and capacity planning. "Usage-based entitlements" (Option A) tracks limited-resource features like Login minutes or Data Cloud credits, but not standard seat-based user licenses. Searching for license types (Option B) or checking user management settings (Option D) will not provide a consolidated summary of the total license pool.

NEW QUESTION # 27

At Cloud Kicks, when a rep needs to seek additional support help, there's a series of actions the company wants to ensure are taken. The steps include sending an email and changing the status and owner of the case. What should a Platform Administrator use to give the reps an easy way to make these updates?

- A. Quick Text with Email Templates
- B. Case Assignment Rules
- C. Macros with Quick Actions
- D. Autolaunched Flows with Email Alerts

Answer: C

Explanation:

To provide reps with an "easy way" to perform a repetitive sequence of manual tasks, Macros are the ideal solution. A Macro allows a user to perform multiple steps-such as changing a Case Status, reassigning the Case Owner, and sending a pre-written email-with a single click. When combined with Quick Actions, Macros can navigate the user interface, populate fields, and submit changes automatically. This significantly reduces manual data entry and ensures that the company's required support process is

followed consistently. Case Assignment Rules (Option A) and Autolaunched Flows (Option D) are fully automated and trigger on save, which might not be appropriate if the rep needs to decide when to trigger the support request. Quick Text (Option C) only assists with typing but does not automate field changes or ownership transfers.

NEW QUESTION # 28

You should figure out what kind of Plat-Admn-201 test guide is most suitable for you. We here promise you that our Plat-Admn-201 certification material is the best in the market, which can definitely exert positive effect on your study. Our Plat-Admn-201 learn tool create a kind of relaxing leaning atmosphere that improve the quality as well as the efficiency, on one hand provide conveniences, on the other hand offer great flexibility and mobility for our customers. And we believe you will love our Plat-Admn-201 Exam Questions if you can free download the demo of our Plat-Admn-201 learning guide.
