There are several personal and professional benefits that you can gain after passing the Check Point Certified Security Expert R81 (156-315.81) certification exam. The prominent 156-315.81 certification benefits include validation of skills and knowledge, more career opportunities, instant rise in salary, quick promotion, etc.

## CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q337-Q342):

### NEW QUESTION # 337

Tom has connected to the R81 Management Server remotely using SmartConsole and is in the process of making some Rule Base changes, when he suddenly loses connectivity. Connectivity is restored shortly afterward.

What will happen to the changes already made?

- A. Tom's changes will have been stored on the Management when he reconnects and he will not lose any of his work.
- B. Tom will have to reboot his SmartConsole computer, and access the Management cache store on that computer, which is only accessible after a reboot.
- C. Tom will have to reboot his SmartConsole computer, clear to cache, and restore changes.
- D. Tom's changes will be lost since he lost connectivity and he will have to start again.

**Answer: A**

Explanation:

Tom's changes will have been stored on the Management when he reconnects and he will not lose any of his work.

This is because SmartConsole has a feature called Concurrent Administration, which allows multiple administrators to work on the same Security Policy simultaneously, without blocking each other or creating conflicts. Concurrent Administration uses a locking mechanism to prevent multiple administrators from modifying the same rule or object at the same time. When an administrator clicks on a rule or an object, it becomes locked and a lock icon appears next to it. The lock icon shows the name of the administrator who is working on that rule or object, and prevents other administrators from editing it until it is unlocked<sup>12</sup>.

Concurrent Administration also has a feature called Session Persistence, which preserves the changes made by an administrator in case of a network failure or a SmartConsole crash. When an administrator reconnects to the Management Server after a network failure or a SmartConsole crash, they can resume their work from where they left off, without losing any changes. The changes are stored locally on the administrator's machine until they are published to the Management Server<sup>13</sup>.

Therefore, if Tom has connected to the R81 Management Server remotely using SmartConsole and is in the process of making some Rule Base changes, when he suddenly loses connectivity, his changes will not be lost. They will be stored locally on his machine and he can resume his work when he reconnects to the Management Server.

### NEW QUESTION # 338

Vanessa is expecting a very important Security Report. The Document should be sent as an attachment via e-mail. An e-mail with Security\_report.pdf file was delivered to her e-mail inbox. When she opened the PDF file, she noticed that the file is basically empty and only few lines of text are in it. The report is missing some graphs, tables and links.

Which component of SandBlast protection is her company using on a Gateway?

- A. SandBlast Threat Emulation
- B. SandBlast Agent
- C. SandBlast Threat Extraction
- D. Check Point Protect

**Answer: C**

### NEW QUESTION # 339

Sieve is a Cyber Security Engineer working for Global Bank with a large scale deployment of Check Point Enterprise Appliances. Steve's manager, Diana asks him to provide firewall connection table details from one of the firewalls for which he is responsible. Which of these commands may impact performance briefly and should not be used during heavy traffic times of day?

- A. fw tab -t connections -c
- B. fw tab -t connections -f
- C. fw tab -t connections -s
- D. fw tab -t connections

**Answer: D**

Explanation:

The command that may impact performance briefly and should not be used during heavy traffic times of day is fw tab -t connections.

This command displays all the entries in the connections table, which can be very large and consume a lot of CPU resources. The other commands are less intensive and can be used safely. The command fw tab -t connections -s displays only the statistics of the connections table, such as number of entries, peak size, etc. The command fw tab -t connections -c clears all the entries in the connections table. The command fw tab -t connections -f displays only the entries that match a filter expression. Reference: [fw tab Command]

#### NEW QUESTION # 340

Check Point security components are divided into the following components:

- A. GUI Client, Security Gateway, WebUI Interface
- B. **GUI Client, Security Management, Security Gateway**
- C. Security Management, Security Gateway, Consolidate Security Logs
- D. Security Gateway, WebUI Interface, Consolidated Security Logs

**Answer: B**

#### NEW QUESTION # 341

You want to gather data and analyze threats to your mobile device. It has to be a lightweight app. Which application would you use?

- A. **Sandblast Mobile Protect**
- B. SmartEvent Client Info
- C. Check Point Capsule Cloud
- D. SecuRemote

**Answer: A**

Explanation:

SandBlast Mobile Protect is an application that provides comprehensive protection for mobile devices against cyber threats. SandBlast Mobile Protect is a lightweight app that does not affect the device performance or battery life. It monitors network traffic, device behavior, and installed apps to detect and prevent attacks such as phishing, malware, ransomware, botnets, and man-in-the-middle<sup>5</sup>. SandBlast Mobile Protect also integrates with Check Point's ThreatCloud intelligence network to provide real-time threat information and updates<sup>6</sup>. Therefore, the correct answer is B)

#### NEW QUESTION # 342

.....

With each passing year, there's a slight change in the format of 156-315.81 exam.
