GH-900 Torrent Anleitung - GH-900 Studienführer & GH-900 wirkliche Prüfung

BONUS!!! Laden Sie die vollständige Version der ZertSoft GH-900 Prüfungsfragen kostenlos herunter: https://drive.google.com/open?id=1LQk4smGGXRqVspvMowfrevK-tD07Cmt9

Hier Zeigen wir Ihnen den Grundwert von ZertSoft. ZertSoft Dumps haben die Durchlaufrate mit 100%. ZertSoft Dumps sind die Zusammenfassung von den reichen Erfahrungen der IT-Eliten und wertsvoll. Sie können Dumps benutzen, um Microsoft GH-900 Zertifizierungsprüfungen vorzubereiten und auch Ihre Fähigkeiten zu entwickeln. Außerdem wenn Sie andere Prüfungskenntnisse kennen lernen, kann es Ihren Wunsch erfüllen.

Microsoft GH-900 Prüfungsplan:

Thema	Einzelheiten

Thema 1	• Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Thema 2	• Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
Thema 3	• Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.
Thema 4	• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
Thema 5	• Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.

Microsoft GH-900 VCE Dumps & Testking IT echter Test von GH-900

Unsere Garantie, Die Prüfungsfragen und Antworten zu Microsoft GH-900 （GitHub Foundations） von ZertSoft ist eine Garantie für eine erfolgreiche Prüfung! Bisher fiel noch keiner unserer Kandidaten durch! Falls aber jemand durch die Zertifizierungsprüfung fallen sollte, zahlen wir die 100% Material-Gebühr zurück. Wir übernehmen die volle Geld-zurück-Garantie auf Ihre Zertifizierungsprüfungen! Unsere Fragen und Antoworten sind alle aus dem Fragenpool, alle sind echt und original.

Microsoft GitHub Foundations GH-900 Prüfungsfragen mit Lösungen (Q28-Q33):

28. Frage
What command should you type to create and switch over to a new branch?

- A. git checkout -b newBranchName
- B. git checkout -n newBranchName
- C. git checkout newBranchName
- D. git branch newBranchName

Antwort: A

Begründung:
git checkout -b <new-branch>
Create a new branch named <new-branch>, start it at <start-point>, and check the resulting branch out; Incorrect:
[Not C] git checkout [<branch>]
To prepare for working on <branch>, switch to it by updating the index and the files in the working tree, and by pointing HEAD at the branch. Local modifications to the files in the working tree are kept, so that they can be committed to the <branch>.

Reference:

https://git-scm.com/docs/git-checkout

29. Frage

Which of the following are advantages of saved replies?

(Each correct answer presents part of the solution. Choose two.)

- A. Saved replies will send auto notifications when a user is tagged to an issue.
- B. Saved replies are tied to a GitHub user 's personal account.
- C. Saved replies allow you to create a reusable response to issues and pull requests.
- D. Saved replies are allocated at the enterprise level for all users.

Antwort: B,C

Begründung:

Saved replies in GitHub are a feature that allows users to create and save templates of commonly used responses for issues and pull requests. This feature can significantly enhance productivity and ensure consistent communication.

* Saved Replies Are Tied to a User 's Personal Account:

* Option A is correct because saved replies are specific to a user 's GitHub account, meaning they are accessible to the user across all repositories they have access to.

* Saved Replies Allow Reusable Responses:

* Option C is correct because the primary purpose of saved replies is to allow users to create reusable responses for issues and pull requests, saving time and ensuring consistency.

* Incorrect Options:

* Option B is incorrect because saved replies are not allocated at the enterprise level; they are specific to individual user accounts.

* Option D is incorrect because saved replies do not send auto notifications; they are manually inserted by the user when responding to issues or pull requests.

GitHub Docs: Using Saved Replies

30. Frage

When creating a repository from a template, what will the new repository contain?

- A. pull requests
- B. default branch
- C. commit history
- D. contributors

Antwort: B

Begründung:

Creating a repository from a template

You can generate a new repository with the same directory structure and files as an existing repository.

You can choose to include the directory structure and files from only the default branch of the template repository or to include all branches. Branches created from a template have unrelated histories, which means you cannot create pull requests or merge between the branches.

Note:

Creating a repository from a template is similar to forking a repository, but there are important differences:

A new fork includes the entire commit history of the parent repository, while a repository created from a template starts with a single commit. [Not A] Commits to a fork don't appear in your contributions graph, while commits to a repository created from a template do appear in your contribution graph.

A fork can be a temporary way to contribute code to an existing project, while creating a repository from a template starts a new project quickly.

https://docs.github.com/en/repositories/creating-and-managing-repositories/creating-a-repository- from-a-template

31. Frage

Workflows can reference actions in:
(Each correct answer presents a complete solution. Choose three.)

- A. An enterprise marketplace.
- B. A published Docker container image on Docker Hub.
- C. GitHub Packages.
- D. The same repository as your workflow file.
- E. Any public repository.

Antwort: B,D,E

Begründung:
In GitHub Actions workflows, actions can be referenced from various sources depending on the needs of the workflow.
* Any Public Repository:
* Option A is correct. Actions can be referenced from any public GitHub repository, allowing the reuse of shared actions across multiple projects.
* The Same Repository as Your Workflow File:
* Option B is correct. Actions stored in the same repository as the workflow file can be referenced directly, which is common for custom actions specific to that project.
* A Published Docker Container Image on Docker Hub:
* Option E is correct. Workflows can reference actions that are provided as Docker container images hosted on Docker Hub, allowing integration of complex tools and environments.
* Incorrect Options:
* Option C (GitHub Packages) is incorrect as it is more commonly used for storing and managing dependencies, not actions.
* Option D (An enterprise marketplace) is incorrect because GitHub Actions are not directly referenced from an enterprise marketplace but rather from public repositories or Docker images.

GitHub Docs: Reusing Workflows

32. Frage
What steps must you follow to use GitHub Copilot? (Choose two.)

- A. Sign and submit the legal disclaimer.
- B. Sign up for a Copilot edition and enable it for your account.
- C. Install the Copilot extension for your supported IDE.
- D. Store your coding project(s) in GitHub.
- E. Install the Copilot App on your GitHub organization, account, or server.

Antwort: B,C

Begründung:
Setting up GitHub Copilot for yourself
Follow these steps to start using Copilot.
[A] 1. Get access to GitHub Copilot
There are a few ways that you can get access to GitHub Copilot:
* Use Copilot Free. Get a limited experience of Copilot with up to 2,000 code completion requests and 50 premium requests per month-no paid plan required. See About individual GitHub Copilot plans and benefits.
-> * Sign up for a paid plan.
* Etc.
[C] 2. 2. Install the Copilot extension for your IDE
If you want to use Copilot in your IDE, install the Copilot extension for your IDE.
