

Free PDF 2026 Marvelous UiPath UiPath-SAIv1: Well UiPath Specialized AI Associate Exam (2023.10) Prep

DOWNLOAD the newest Pass4suresVCE UiPath-SAIv1 PDF dumps from Cloud Storage for free:
<https://drive.google.com/open?id=1tR9rZO8fd6S8kDbE5hwaCahDJFPV4JV7>

The web-based UiPath Specialized AI Associate Exam (2023.10) (UiPath-SAIv1) practice test software can be used through browsers like Firefox, Safari, and Google Chrome. The customers don't need to download or install any excessive plugins or software in order to use the web-based UiPath Specialized AI Associate Exam (2023.10) (UiPath-SAIv1) practice exam format. The web-based UiPath Specialized AI Associate Exam (2023.10) (UiPath-SAIv1) practice test software format is supported by different operating systems like Mac, iOS, Linux, Windows, and Android.

With the aid of our UiPath-SAIv1 exam preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our UiPath-SAIv1 learning questions. Our UiPath-SAIv1 training questions are the accumulation of professional knowledge worthy practicing and remembering. There are so many specialists who join together and contribute to the success of our UiPath-SAIv1 Guide quiz just for your needs.

Quiz 2026 UiPath UiPath-SAIv1: Reliable Well UiPath Specialized AI Associate Exam (2023.10) Prep

Pass4suresVCE UiPath UiPath-SAIv1 practice exam support team cooperates with users to tie up any issues with the correct equipment. If UiPath Specialized AI Associate Exam (2023.10) (UiPath-SAIv1) certification exam material changes, Pass4suresVCE also issues updates free of charge for three months following the purchase of our UiPath Specialized AI Associate Exam (2023.10) (UiPath-SAIv1) exam questions.

UiPath Specialized AI Associate Exam (2023.10) Sample Questions (Q16-Q21):

NEW QUESTION # 16

What does the Export stage of the Document Understanding Framework do?

- A. Allows a human to validate and correct the extracted data.
- B. Extracts the text out of the image document using OCR (Optical Character Recognition).
- **C. Converts the result of extraction to a dataset or to a customized format.**
- D. Classifies the document as one of the predefined document types.

Answer: C

Explanation:

According to the UiPath documentation portal¹, the Export stage of the Document Understanding Framework is the final stage of the document processing workflow, where the extracted data is converted to a dataset or to a customized format, such as Excel, JSON, or XML. The Export stage enables you to easily export data for training ML models, using the Export files dialog box in Data Manager or Document Manager. The Export stage also allows you to export the schema of the fields and their configurations, which can be imported into a different session. The Export stage supports different export options, such as current search results, all labeled, schema, or all. The Export stage also provides validation rules, such as requiring at least 10 labeled documents or pages for each field, and at least one document for each classification option¹. Therefore, option A is the correct answer, as it describes the main function and benefit of the Export stage. Option B is incorrect, as it refers to the Data Validation stage, which is the previous stage of the document processing workflow, where a human can review and correct the extracted data using the Validation Station or the Present Validation Station activities². Option C is incorrect, as it refers to the Classification stage, which is the second stage of the document processing workflow, where the document is classified as one of the predefined document types using the Classify Document Scope activity and a classifier of choice³. Option D is incorrect, as it refers to the Digitization stage, which is the first stage of the document processing workflow, where the text is extracted out of the image document using OCR (Optical Character Recognition) using the Digitize Document activity and an OCR engine of choice.

NEW QUESTION # 17

Can a custom-built extractor be used in the Data Extraction Scope activity?

- A. Yes, by using Coded Workflows.
- B. Yes, by creating a new extractor that implements Form Extractor or Regex Based Extractor in the custom-built implementation.
- **C. Yes, by referencing UiPath.Documentprocessing.Contracts in the custom-built implementation.**
- D. No, only out-of-the-box extractors can be used.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

UiPath allows developers to build custom extractors that can be used within the Data Extraction Scope activity by implementing a specific interface. This is done by referencing the `UiPath.DocumentProcessing.Contracts` assembly in the custom extractor.

* This enables plugging custom ML models or logic into the Document Understanding workflow.

* Custom extractors must implement interfaces like `IExtractor` or `IFormExtractor`.

* UiPath Documentation Reference: Create a Custom Extractor - UiPath Docs

NEW QUESTION # 18

Which of the following document type is part of UiPath's out-of-the-box models?

- A. Medical prescriptions.
- B. Emails.
- **C. Invoices.**
- D. Letters.

Answer: C

Explanation:

UiPath offers several pre-trained out-of-the-box models, and Invoices is one of the most commonly supported document types. This

model is optimized to extract relevant fields such as invoice numbers, dates, amounts, and more from structured invoices. Other common out-of-the-box models include receipts and purchase orders.

NEW QUESTION # 19

In the case of accidentally starting a process from UiPath Assistant, where should the user manually terminate the execution?

- A. From the "Jobs" tab in UiPath Assistant.
- B. By terminating the UiPath Robot service from the Task Manager.
- C. By closing the UiPath Assistant application.
- D. From the "Home" tab and locate the running process associated with the execution.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Within UiPath Assistant, the "Jobs" tab displays all active or queued processes. From there, a user can select a running job and manually stop or kill the execution. This is the safest and recommended way to halt unintended automations.

* Closing UiPath Assistant does not stop a running process—it only hides the interface.

* UiPath Documentation Reference: UiPath Assistant Guide - Managing Jobs

NEW QUESTION # 20

What is the correct execution order of the Document Understanding template stages?

Instructions: Drag the stages found on the "Left" and drop them on the "Right" in the correct order.

Template Stages	Order of Execution
Taxonomy	First
Classify	Second
Digitize	Third
Extract	Fourth
Extraction Validation	Fifth
Export	Sixth

Answer:

Explanation:

Template Stages	Order of Execution
Taxonomy	First
Classify	Second
Digitize	Third
Extract	Fourth
Extraction Validation	Fifth
Export	Sixth

Explanation:

The correct execution order of the Document Understanding template stages is:

Taxonomy

Digitize
Classify
Extract
Extraction Validation
Export

Comprehensive and Detailed Explanation: The Document Understanding template stages are based on a document processing flowchart that follows these steps:

First, you need to define the Taxonomy of the document types and fields that you want to process and extract information from. This is done using the Taxonomy Manager in UiPath Studio¹.

Next, you need to Digitize the input documents, which can be in various formats such as PDF, image, or text. This is done using the Digitize Document activity, which converts the documents into a machine-readable format and performs OCR if needed².

Then, you need to Classify the digitized documents into the predefined document types in your taxonomy. This is done using the Classify Document Scope activity, which can use various classifiers such as Keyword Based Classifier, Machine Learning Classifier, or Intelligent Form Extractor³.

After that, you need to Extract the relevant information from the classified documents based on the fields in your taxonomy. This is done using the Data Extraction Scope activity, which can use various extractors such as Regex Based Extractor, Machine Learning Extractor, or Form Extractor.

Next, you need to perform Extraction Validation to review and correct the extracted information, either manually or automatically. This is done using the Present Validation Station activity, which can use either the Validation Station or the Action Center for human-in-the-loop validation.

Finally, you need to Export the validated information to the desired output location, such as a file, a database, or a queue. This is done using the Export Extraction Results activity, which can use various exporters such as Excel Exporter, CSV Exporter, or Queue Item Exporter.
