Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q77-Q82):

NEW QUESTION # 77

You have a data loss prevention (DLP) policy configured for endpoints as shown in the following exhibit.

Create rule

Use actions to protect content when the conditions are met.

∧ Audit or restrict activities on devices 🗑

When specified activities are detected on devices for files containing the sensitive info you're protecting, you can choose to only audit the activity, block it entirely, or block it but allow users to override the restriction.
Learn more restricting device activity

Service domain and browser activities

Detects when protected files are blocked or allowed to be uploaded to cloud service domains based on the 'Allow/Block cloud service domains' list in endpoint DLP settings.

☑ Upload to a restricted cloud service domain or access from an unallowed browsers ⓘ [Block ∨]

File activities for all apps

Decide whether to apply restrictions for file related activity. Unless you choose different restrictions for restricted apps or app groups below, any restrictions you choose here will be enforced for all apps.

○ Don't restrict file activity

⦿ Apply restrictions to specific activity

When the activities below are detected on devices for supported files containing sensitive info that matches this policy's conditions, you can choose to audit the activity, block it entirely, or block it but allow users to override the restriction

☑ Copy to clipboard ⓘ [Audit only ∨]

☑ Copy to a USB removable media ⓘ [Audit only ∨]

☑ Copy to a network share ⓘ [Audit only ∨]

☑ Print ⓘ [Audit only ∨]

[Save] [Cancel] ■■ Microsoft

From a computer named Computer1, a user can sometimes upload files to cloud services and sometimes cannot. Other users experience the same issue.

What are two possible causes of the issue? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. There are file path exclusions in the Microsoft 365 Endpoint data loss prevention (Endpoint DLP) settings.
- B. The Access by restricted apps action is set to Audit only.
- C. The computers are NOT onboarded to Microsoft Purview.
- D. The Copy to clipboard action is set to Audit only.
- E. The unallowed browsers in the Microsoft 365 Endpoint data loss prevention (Endpoint DLP) settings are NOT configured.

Answer: A,E

Explanation:

The issue where users sometimes can upload files to cloud services and sometimes cannot suggests inconsistent enforcement of Endpoint DLP policies. This can be caused by the unallowed browsers in the Microsoft 365 Endpoint DLP settings are NOT configured. Also, there are file path exclusions in the Microsoft 365 Endpoint DLP settings.

Endpoint DLP can block uploads only when using unallowed browsers. If unallowed browsers are not configured, users might be able to bypass restrictions by switching to a different browser. This could explain why uploads sometimes work and sometimes don't, depending on which browser is used.

File path exclusions allow certain files or folders to be exempt from DLP restrictions. If a specific file location is excluded, files stored there won't trigger DLP policies, leading to inconsistent behavior. This could result in some uploads being blocked while others are allowed.

NEW QUESTION # 78

You have a Microsoft 365 E5 subscription that uses Microsoft Purview insider risk management and contains three users named User1, User2, and User3.
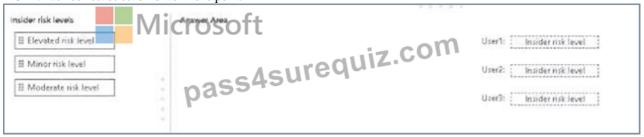

All insider risk management policies have adaptive protection enabled and the default conditions for insider risk levels configured. The users perform the following activities, which trigger insider risk policy alerts:

* User1 performs at least one data exfiltration activity that results in a high severity risk score.
* User2 performs at least three risky user activities within seven days, that each results in a high severity risk score.
* User3 performs at least bwo data exfiltration activities within seven days, that each results in a high severity risk score.

Which insider risk level is assigned to each user? To answer, drag the appropriate levels to the correct users.

Each level may be used once, more than once, or not at all. You may need to drag the split bar between panes or seroll to view content.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Step 1 - Review the configuration
Sensitivity label name: Contoso Confidential
Scope: Files and emails
Access control:
Encrypts documents/emails.
Permissions assigned to AuthenticatedUsers with Co-Author rights.
Offline access allowed only for 7 days.
Auto-labeling = None (not configured).
Content marking: Footer applied.
Step 2 - Analyze each statement
Statement 1: If a user account is disabled, the user will be immediately prevented from opening a file protected by Contoso Confidential.
Sensitivity labels with encryption enforce Azure AD authentication every time a user tries to access a file.
If the account is disabled in Azure AD, access is blocked immediately.
answer: Yes
Statement 2: Guest users will be able to open documents protected by Contoso Confidential.
Access control was configured only for AuthenticatedUsers (internal users).
Guest or external users are not included in this group.
Therefore, guest users cannot open the protected documents.
answer: No
Statement 3: Contoso Confidential will be applied automatically to the files stored in Microsoft SharePoint Online.
Auto-labeling for files and emails = None.
That means labeling must be applied manually by users, not automatically.
answer: No
