

# JN0-232 Reliable Exam Papers - Practice JN0-232 Exams Free

BTW, DOWNLOAD part of Actual4test JN0-232 dumps from Cloud Storage: <https://drive.google.com/open?id=1ODpdWiEaAJ7zlhbKQO8oXV5-69WOcmoK>

Our company has spent more than 10 years on compiling JN0-232 study materials for the exam in this field, and now we are delighted to be here to share our JN0-232 learning guide with all of the candidates for the exam in this field. There are so many striking points of our JN0-232 Preparation exam. If you want to have a better understanding of our JN0-232 exam braindumps, just come and have a try!

Appropriately, we can wrap up this post with the way that the test centers around the material that is essential to handily clear your Security, Associate (JNCIA-SEC) certification exam. You can trust the material and set aside an edge to zero in on those before you win eventually over the last Security, Associate (JNCIA-SEC) (JN0-232) exam dates. To get it, find the source that assists you with getting the right test and spotlight on material agreeable for you for organizing the Security, Associate (JNCIA-SEC) exam.

## Practice JN0-232 Exams Free | JN0-232 Sample Exam

if you want to pass your JN0-232 exam and get the certification in a short time, choosing the suitable JN0-232 exam questions are very important for you. You must pay more attention to the study materials. In order to provide all customers with the suitable study materials, a lot of experts from our company designed the JN0-232 Training Materials. We can promise that if you buy our products, it will be very easy for you to pass your JN0-232 exam and get the certification.

## Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q28-Q33):

### NEW QUESTION # 28

What is the purpose of assigning logical interfaces to separate security zones in Junos OS?

- A. to control traffic that traverses different VLANs using security policies
- B. to manage routing protocols and updates
- C. to enable network monitoring through SNMP
- D. to simplify the configuration of network interfaces

**Answer: A**

Explanation:

In Junos OS, security zones are the foundation of SRX firewall policy enforcement. Logical interfaces must be assigned to zones. This enables:

- \* Separation of traffic by zone boundaries.
  - \* Enforcement of security policies for traffic traversing between zones.
  - \* Control of traffic across VLANs, subnets, or functional areas (e.g., trust, untrust, DMZ).
- Other options:

\* Zone assignment is not used to simplify interface configuration (A).

\* Routing protocols and updates (B) are handled by routing instances, not zones.

\* SNMP monitoring (D) is enabled under system or services configuration, not zones.

Reference:Juniper Networks -Security Zones and Policy Enforcement, Junos OS Security Fundamentals.

### NEW QUESTION # 29

What are two system-defined zones created on the SRX Series Firewalls? (Choose two.)

- A. DMZ
- B. null
- C. management
- D. junos-host

**Answer: B,D**

Explanation:

On SRX Series Firewalls, Junos OS automatically creates system-defined zones that have special functions:

\* Null zone (Option A):A predefined discard zone. By default, all interfaces belong to the null zone until assigned to a user-defined zone. Traffic destined to the null zone is dropped.

\* Junos-host zone (Option B):A predefined functional zone that allows security policies to control traffic directed to the SRX device itself (management traffic, such as SSH, HTTP, SNMP).

\* Management zone (Option C):There is a predefined management functional zone, but it is not called "management" as a system-defined security zone.

\* DMZ (Option D):A DMZ zone must be explicitly created by the administrator, it is not system-defined.

Correct Zones:null, junos-host

Reference:Juniper Networks -Security Zones and Functional Zones, Junos OS Security Fundamentals.

### NEW QUESTION # 30

Your company is acquiring a smaller company that uses the same private address range that your company currently uses in its North America division. You have a limited number of public IP addresses to use for the acquisition. You want to allow the new acquisition's users to connect to the existing services in North America.

Which two features would you enable on your SRX Series Firewall to accomplish this task? (Choose two.)

- A. IDP
- B. PAT
- C. NAT
- D. BGP

**Answer: B,C**

Explanation:

When two networks use the same private IP address ranges, conflicts occur. The solution is to use address translation techniques on the SRX:

\* NAT (Network Address Translation):Translates private IP addresses to another IP range, enabling connectivity between overlapping private networks.

\* PAT (Port Address Translation):Extends NAT by allowing multiple private IPs to share one or a few public IPs using different port numbers. This is especially useful when there is a limited pool of public IP addresses.

Other options:

\* IDP (Option A):Intrusion Detection and Prevention, unrelated to address overlap.

\* BGP (Option C):A routing protocol, but it does not solve overlapping IP addressing problems.

Correct Features:NAT and PAT

Reference:Juniper Networks -NAT and Address Overlap Solutions, Junos OS Security Fundamentals.

### NEW QUESTION # 31

Click the Exhibit button.

The screenshot shows a browser window titled "Juniper Web Filtering" with the URL "https://www.wikipedia.org". The page content displays a block message: "Juniper Web Filtering has been set to block this site." Below this message, the log details are shown: "10.10.101.10(57103)->198.35.26.96(443) www.wikipedia.org/" and "CATEGORY: NG\_Reference REASON: BY\_PRE\_DEFINED". The Juniper Networks logo is visible in the background.

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. The URL matches a predefined Web filtering category.
- B. This is a custom Web filtering block message.
- C. The SRX firewall does not have an SSL proxy configuration.
- D. The NextGen Web Filtering type is being used.

**Answer: A,D**

Explanation:

From the exhibit:

\* The user attempted to access <https://www.wikipedia.org>.

\* The block page indicates:

\* CATEGORY: NG\_Reference

\* REASON: BY\_PRE\_DEFINED

\* The header states: "Juniper Web Filtering has been set to block this site." Analysis of options:

\* Option A:Correct. The log shows "REASON: BY\_PRE\_DEFINED," which means the site was blocked because it matched a predefined category in the Web filtering database.

\* Option B:Correct. The category "NG\_Reference" indicates that the NextGen (Enhanced/Cloud- based) Web Filtering type is being used.

\* Option C:Incorrect. The exhibit does not provide any information about SSL proxy configuration; it only shows that the HTTPS site was blocked.

\* Option D:Incorrect. The block page shown is the standard Juniper default block page, not a custom message.

Correct Statements: The URL matches a predefined Web filtering category, and the NextGen Web Filtering type is being used.

Reference: Juniper Networks - Web Filtering (SurfControl, Enhanced, and NextGen Web Filtering), Junos OS Security Fundamentals.

### NEW QUESTION # 32

Which two statements about global security policies are correct? (Choose two.)

- A. Global security policies require specific zone contexts.
- B. You can use both zone-based security policies and global security policies at the same time.
- C. Global policies are processed before zone-based security policies.
- D. The from-zone and to-zone contexts are not required for a global security policy.

**Answer: B,D**

Explanation:

Global security policies extend the flexibility of policy enforcement across the SRX. They are not tied to specific source and destination zones:

\* From-zone and to-zone contexts are not required (Option A). Global policies apply across all zones unless restricted by match conditions.

\* Global security policies do not require specific zone contexts (Option B is incorrect).

\* Global policies are processed after zone-based policies, not before. This means that zone-based security policies take precedence (Option C is incorrect).

\* Administrators can configure both zone-based security policies and global security policies at the same time on the same device (Option D is correct).

This allows flexible designs where specific policies can be enforced by zone, while general policies can be applied globally without duplicating rules across multiple zones.

Reference: Juniper Networks - Junos OS Security Fundamentals, Global Security Policies.

## NEW QUESTION # 33

.....

It is browser-based; therefore no need to install it, and you can start practicing for the Security, Associate (JNCIA-SEC) (JN0-232) exam by creating the Juniper JN0-232 practice test. You don't need to install any separate software or plugin to use it on your system to practice for your actual Security, Associate (JNCIA-SEC) (JN0-232) exam. Actual4test Security, Associate (JNCIA-SEC) (JN0-232) web-based practice software is supported by all well-known browsers like Chrome, Firefox, Opera, Internet Explorer, etc.
